Panhandle Eastern Pipe Line Company
1221 Baltimore Ave.
Kansas City, Mo.

April 11, 1942

Mr. Park Chamberlain
815 15th Street, N. W.
Washington, D. C.

Dear Mr. Chamberlain:

In accordance with your request during my cross-examination at the recent hearing in Washington, D. C. on April 2nd, I have checked the calculations on your work sheet comparing demand charges 1941 and 1942 and have noted my agreement with the calculations thereon. There is also attached a tabulation showing our calculation of charges and payments for the fiscal years as well as the calendar years. From a study of these figures I think we can agree that:

(1) Demand charges for either the calendar or fiscal years 1942 will be greater than those of the previous year,

(2) Charges and payments will be less under the original contract than under the supplemental contract for the ensuing fiscal year,

(3) Charges and payments will be less under the original contract than had been assumed by me in the preparation of Exhibit 161.

We were unable to check the figure $4,497,920.16 which you introduced (Page 9440, et seq.). Our figure for this is $4,408,613.32, however, it is not felt that this is important since the difference will not affect the conclusions.

The letter referring to the 150 million cubic feet, requested by your company, was the one written by Mr. Batten to us under date of May 28, 1941.

I am returning your work sheet above mentioned and photostatic copy of the January bill which I inadvertently picked up when on the witness stand.

Yours very truly,

O. W. MORTON.

O. W. Morton 4/6/42

[fol. 16585] (Exhibit 256.)

New York, N. Y.

September 19, 1930.

Columbia Oil & Gasoline Corporation,
New York City.

National City Co., New York City.

Dear Sirs:

Referring to agreement between you and ourselves, dated September 17, 1930, it is understood and agreed between us as follows:

(1) The reimbursement to Missouri-Kansas Pipe Line Co. by the Panhandle Co. provided for in article IV, paragraph (c) of said agreement, shall be made on the closing date under said agreement.

(2) The City Co. agrees that the credit of three million dollars ($3,000,000) referred to in article VI, paragraph (b) (1) of said agreement, to be arranged by the City Co. from the National City Bank, effective at once, shall be to Missouri-Kansas Pipe Line Co., guaranteed by the Panhandle Co.

(3) We agree to pay off the credit referred to in (2) hereof and to clear the Panhandle Co. of any contingent liability arising from its guaranty referred to in (2) hereof on or before the closing date under said agreement.

(4) The words "closing date under said agreement", as used herein, shall be deemed to mean the date named in article X of said agreement as the closing date thereunder or any date to which said closing date shall be extended by mutual agreement of the parties to said agreement.

Our signature to this letter and your confirmation at the foot thereof will constitute a binding agreement between us to the above effect.

Yours very truly,

MISSOURI-KANSAS PIPE
LINE CO.,
By Frank P. Parish, President.

Confirmed:

COLUMBIA OIL & GASOLINE CORPORATION,
By E. Reynolds, Jr., Vice President.

THE NATIONAL CITY CO.,
By Stanley A. Russell,
Vice President.

[fol. 16586] Contract, this 17th day of September 1930, between Missouri-Kansas Pipe Line Co. (hereinafter referred to as "Pipe Line Co."), party of the first part, the National City Co. (hereinafter referred to as "City Co."), party of the second part, and Columbia Oil & Gasoline Corporation (hereinafter referred to as "Columbia"), party of the third part.

I. The Pipe Line Co. represents to the City Co. and to Columbia as follows:

(a) The Pipe Line Co. is a corporation duly organized and existing under the laws of the State of Delaware, with an authorized capital stock consisting of 5,000,000 shares of common stock of the par value of $5 each and 5,000,000 shares of class B stock of the par value of $1 each. Of the said stock, 1,065,452 shares of common stock (exclusive of dividend scrip) and no more are now outstanding, and 1,598,918 shares of class B stock and no more have been issued and are now deposited under a voting trust agreement. The Pipe Line Co. has no stock of any class, except as above set forth and has no funded indebtedness.

(b) Panhandle Eastern Pipe Line Co (hereinafter referred to as "Panhandle Co.") is a corporation duly organized and existing under the laws of the State of Delaware, having a total authorized share capital consisting of 15,000 shares of preferred stock of the par value of $100 a share, and 10,000 shares of common stock, without par value, all of which preferred stock has heretofore been issued but has since been retired, and all of which common stock is now issued and outstanding and owned by the Pipe Line Co. No options or rights to purchase any of the said stock are now outstanding. All the outstanding indebtedness of the Panhandle Co., except indebtedness for current construction and material costs, has leases and

the like, is owned by the Pipe Line Co., and represents in general advances made to the Panhandle Co. by the Pipe Line Co. for the acquisition and construction of its properties.

(c) The Panhandle Co. has been organized for the purpose of building and operating a gas pipe line from the Panhandle district of the State of Texas to the Indiana-Illinois State line, through the States of Texas, Oklahoma, Kansas, Missouri, and Illinois, with lateral lines. It or its wholly owned subsidiaries, Texas Interstate Pipe Line Co. and/or Panhandle Eastern Pipe Line Co. of Illinois, have acquired the right-of-way for a substantial part of approximately 350 miles, out of a total of approximately 930 miles of the said pipe line and have constructed approximately 200 miles of the pipe line. The said pipe line has and will be constructed of 22-inch pipe from the point of beginning in Moore County, Tex., to Liberal, Kans., of 24-inch pipe from Liberal, Kans., to a point near the Missouri State line, of 22-inch pipe from the Missouri State line to the Peoria branch, and of 20-inch pipe from the said Peoria branch to the Indiana-Illinois State line. Copies of the contracts for the construction of the pipe line, initialed for identification, will be furnished by the officer of the Pipe Line Co. signing this contract.

(d) In addition to the pipe-line property above described, the Panhandle Co., through its said subsidiary, Texas Interstate Pipe Line Co., controls approximately 138,000 acres of natural gas producing lands.

(e) The Pipe Line Co. directly and/or through 100-percent stock ownership in the Missouri-Kansas Gas Co. and Central States Gas Utilities Co. (an Illinois corporation), and/or through a 51-percent stock ownership in J. D. Judd & Co. (A Delaware corporation), and Shale Gas Corporation (a Delaware corporation) owns natural-gas properties including leases or gas purchase contracts in the [fol. 16587] States of Missouri and Kansas, and a system of pipe lines for the supplying of natural gas to the following cities and towns: Kansas City, Mo. (wholesale delivery to American Pipe Line Co.); Independence, Mo.; Belton, Mo.; Loose Springs, Mo.; Morton City, Mo.; Ray-

town, Mo.; Paola, Kans.; Osawatamie, Kans.; Rantoul, Kans.; Imes, Kans.; Greeley, Kans.; Lewisburg, Kans.; Lane, Kans.; Chanute, Kans.

(f) The net asset position of the Panhandle Co. and its subsidiary companies and of the subsidiary companies mentioned in paragraph (e) above (except for inter-company transfers) shall not be substantially less favorable at the closing date than as shown on the pro forma consolidating balance sheet prepared by Arthur Andersen & Co., certified public accountants, as of June 30, 1930. No dividend or other distribution of assets shall be made by the Panhandle Co. or any of the above subsidiary companies pending the closing date.

II. The City Co. represents to the Pipe Line Co. and Columbia that it is a corporation duly organized and existing under the laws of the State of New York and has full corporate power to enter into this contract and to perform its obligations thereunder.

III. Columbia represents to the Pipe Line Co. and the City Co. that it is a corporation duly organized and existing under the laws of the State of Delaware, with an authorized capital stock consisting of 3,175,000 shares of which shares all of the preferred shares are owned by the Columbia Gas & Electric Corporation and all of the common stock is deposited in a voting trust of which P. G. Gossler and G. W. Crawford are the voting trustees. Columbia represents that its net worth is over $35,000,000.

IV. The Pipe Line Co. agrees with the parties hereto as follows:

(a) That it will transfer to the Panhandle Co. all of the natural-gas fields, gas contracts, pipe lines, distributing systems, etc., which it owns wherever located, except those located in Kentucky or southern Indiana, and its stock ownership in all corporations which may own similar property located in the same territory.

(b) That it will sell and deliver to Columbia, 5,000 shares of common stock of the Panhandle Co. (being one-half of its total stock outstanding) at the price per share determined as provided in article VIII hereof.

(c) That it will on or before the closing date pay, without recourse to the original debtor or obliger, all the debts and obligations of the Panhandle Co. and of its subsidiaries, and of the other corporations the stock of which is to be transferred under paragraph (a) of this article, existing on August 31, 1930, as determined by Arthur Andersen & Co., certified public accountants, and that the Pipe Line Co. will cancel any debt or obligation to it of the Panhandle Co., or if its subsidiaries or of any of said corporations referred to in this paragraph (c) as of August 31, 1930. The Panhandle Co. will reimburse the Pipe Line Co. with interest at the rate of 6 percent per annum from the date of such advances to the date of reimbursement for any amounts advanced by the Pipe Line Co. subsequently to corporations the stock of which is to be transferred under paragraph (a) of this article or for account of the properties other than stock, owned directly by it and to be transferred to Panhandle Co. under paragraph (a) of this article IV, other than amounts advanced for the purpose of paying debts or obligations existing on said date as provided heretofore in this paragraph.

[fol. 16588] (d) From time to time as requested by Columbia on or prior to March 15, 1931, the Pipe Line Co. will sell to Columbia all or any part of 2,000 shares of common stock of the Panhandle Co. (said 2,000 shares being 20 percent of its total outstanding stock) at the same price per share as is determined for the purchase by Columbia of the original 5,000 shares of stock of Panhandle Co.

(e) The Pipe Line Co. either directly or through its present and/or future subsidiaries will enter into gas purchase contracts with the Panhandle Co. upon substantially the following terms;

(1) An excess capacity contract for the purchase up to 20,000,000 cubic feet of gas per day at 18 cents per M cubic feet, without limit as to time so long as the Panhandle Co. has any excess capacity; provided, that if the Panhandle Co. can sell all or any gas at a higher price it may reduce proportionately deliveries under this excess capacity contract.

(2) Firm contract, commencing when the Panhandle Co. gives notice to the Pipe Line Co. and Columbia that it

no longer has any excess capacity, for 10 years and thereafter with right of cancellation by either party on 1 year's notice, at the rate of 26½ cents per M cubic feet, deliveries under such contract to be as required by the Pipe Line Co. and to aggregate for each year an amount producing at least a 70 percent annual load factor based on the maximum daily delivery, which maximum shall in no case exceed 20,000,000 cubic feet per day, and after the expiration of 1 year from the effective date of this firm contract such maximum day shall not exceed the maximum day established during said first year.

(f) The Pipe Line Co. will cause the Panhandle Co., pursuant to due corporate action, to create an issue of $20,000,000, aggregate principal amount, of bonds substantially in accordance with schedule A hereto attached.

(g) The Pipe Line Co. will deliver to or on the order of the City Co. 200,000 shares of the Pipe Line Co.'s common stock as presently constituted as consideration for the purchase of the bonds and the arranging of the credits hereinafter in article VI provided for and will cause the Panhandle Co. to sell and deliver to the City Co. the entire issue of $20,000,000 aggregate principal amount, of bonds, above described in schedule A, for the purchase price paid to the Panhandle Co. of $18,000,000, plus accrued interest on the said $20,000,000, aggregate principal amount, of bonds from October 1, 1930, to the date of delivery, and to pay the usual expenses in connection with such financing.

V. Columbia agrees with parties hereto as follows:

(a) That it will purchase the said 5,000 shares of stock of Panhandle and pay therefor the price per share determined as provided in article VIII hereof.

(b) That it will not exercise its right to acquire any of the 2,000 shares of stock of Panhandle referred to in paragraph (d) of article IV hereof unless simultaneously therewith it shall have contracted to sell to one or more oil, gas, or utility companies the stock so to be acquired by Columbia from the Pipe Line Co. and an equal amount of similar stock then owned by Columbia, and unless Columbia and the Pipe Line Co. have agreed otherwise, as a part of the contract the purchaser has agreed to contribute its pro

rata share of any additional financing referred to in article VII, paragraph (a).

[fol. 16589] (c) That it will cause the Columbia Gas & Electric Corporation, either directly or through its present and/or future subsidiaries, to enter into gas-purchase contracts with the Panhandle Co. at or near the Indiana-Illinois State line upon substantially the following terms:

(1) An excess-capacity contract for the purchase up to 20,000,000 cubic feet of gas per day at 18 cents per M cubic feet, without limit as to time so long as the Panhandle Co. has any excess capacity, provided that if the Panhandle Co. can sell all or any gas at a higher price it may reduce proportionately deliveries under this excess-capacity contract.

(2) Firm contract, commencing when the Panhandle Co. gives notice to the Pipe Line Co. and Columbia that it no longer has any excess capacity, for 10 years and thereafter with right of cancellation by either party on 1 year's notice, at the rate of 26½ cents per M cubic feet, deliveries under such contract to be as required by Columbia and to aggregate for each year an amount producing at least a 70-per-cent annual load factor based on the maximum daily delivery, which maximum shall in no case exceed 30,000,000 cubic feet per day, and after the expiration of 1 year from the effective date of this firm contract such maximum day shall not exceed the maximum day established during said first year.

VI. The City Co. agrees with the parties hereto:

(a) That it will purchase the said bonds described in paragraph (f) of article IV and will pay the purchase price therefor on the closing date.

(b) That it will arrange a credit from the National City Bank of New York to the Panhandle Co. of—

(1) $3,000,000, effective at once and running until the closing date in this agreement;

(2) $5,000,000, given on or before October 10, 1930, and running until 30 days after said closing date, provided, that the Panhandle Co. will apply out of the proceeds from the sale of its bonds so much as it may draw down for September construction to the earlier repayments of such credit;

(3) From time to time, so long as any of the proceeds from the sale of said bonds remain in escrow with the trustee, on or before the 10th day of any month, an amount substantially equivalent to the cash which during that month the Panhandle Co. may be entitled to withdraw from escrow for expenditures made by it in the previous month.

VII. The Pipe Line Co. and the Columbia agree with the parties hereto:

(a) That they will, subject to the provisions of article V, paragraph (b) hereof, advance to the Panhandle Co. in equal amounts all cash in excess of that expended or for which liabilities as determined by Arthur Andersen & Co. existed, on August 31, 1930, and of the proceeds of the bond issue, necessary to complete the pipe line under construction from Texas to the Indiana-Illinois State line and take therefor notes and common stock in the ratio of $90 in notes and $10 in two shares of common stock as presently constituted, provided that the notes shall be specifically subordinated to the bonds and shall mature at a date later than the maturity of the bonds.

[fol. 16590] (b) In the event the total cost of the completion of the pipe line heretofore in this article VII referred to is less than $40,000,000, then the Panhandle Co. will deposit with the trustee for the bonds the difference between $40,000,000 and such total cost. Such deposit may be withdrawn from time to time by the Panhandle Co. for 100 percent of capital expenditure subsequently made or such deposit shall be returned to the Panhandle Co. from time to time upon cancelation or redemption of bonds (other than out of sinking-fund moneys) in amounts equal to 200 percent of the principal amount of bonds so canceled or redeemed. In the event such total cost is in excess of $40,000,000, then the Panhandle Co. shall be entitled to have additional bonds delivered to it equal in principal amount to 50 percent of such excess.

(c) That they will cause the Panhandle Co. to put the pipe line into commercial operation as soon as practical after completion and to operate the same at its highest possible efficiency.

VIII. The price per share for the stock of Panhandle to be sold by the Pipe Line Co. and to be purchased by

Columbia under the provisions of this contract shall be ascertained as follows: There shall be determined by Arthur Andersen & Co., the actual cash investment as of August 31, 1930, of the Pipe Line Co. system in the Panhandle Co. and the Panhandle's subsidiary companies as those subsidiaries now exist, such cash investment to be the actual original cash cost to the Pipe Line Co. system, plus interest thereon during construction at the rate of 6 percent per annum, and such cash cost to include the payments made for engineering services by others than companies affiliated with the Pipe Line Co. system, legal expenses, taxes during construction, organization costs, cost of franchises and the $631,000 expended by the Panhandle Co. for gas sale or gas purchase contracts. To such aggregate cash investment shall be added the debts and obligations existing of the Panhandle Co. and its subsidiaries on August 31, 1930, to be paid by the Pipe Line Co. as per article IV paragraph (c) above (these debts and obligations not to include those of the subsidiaries of the Pipe Line Co. whose stock is to be transferred to the Panhandle Co. as per said article IV paragraph (c)). To the sum so ascertained shall be added $7,333,000. The price per share of Panhandle stock shall be obtained by dividing the total sum by 10,000 and adding interest on said price at the rate of 6 percent per annum from August 31, 1930, to the date of payment for each share of stock.

IX. The parties hereto agree that the certificate of incorporation of Panhandle Co. will be amended to restore to the common stock of that company a preemptive right in respect to any further issue of voting stock.

X. The parties hereto agree that delivery and payment for shares of stock and bonds heretofore provided for in paragraph (a) of article V and paragraph (a) of article VI shall be made at the corporate trust department of the City Bank Farmers Trust Co., 52 Wall Street, Borough of Manhattan, city and State of New York, on October 7, 1930, between the hours of 10 a. m. and 12 noon, on that day, which date is sometimes heretofore called the "closing date."

XI. This contract is entered into by the City Co. upon the following conditions:

[fol. 16591] "(a) The legality of the issue of the bonds of the Panhandle Co., referred to in article IV hereof, the title of the Panhandle Co. to its properties, the legality and sufficiency of any and all franchises necessary for their present operations and for operations presently contemplated, and all other legal details in connection with the execution of this contract shall be subject to approval of counsel for the City Co.

"(b) In case Columbia shall for any reason fail to purchase the stock of the Panhandle Co. then the City Co. shall, at its option, have the right to withdraw from this contract and to be relieved from any and all obligation hereunder, upon giving to the Pipe Line Co. notice of exercise of its said option."

XII. Anything herein to the contrary notwithstanding should the City Co. for any reason fail to perform its obligations under this contract, the obligation of Columbia and the Pipe Line Co. hereunder shall continue, in which event Columbia and the Pipe Line Co. will, subject to the provisions of article V, paragraph (b) hereof, advance to the Panhandle Co. in equal amounts all cash in excess of that expended or for which liabilities as determined by Arthur Andersen & Co. existed on August 31, 1930, necessary to complete the pipe line under construction from Texas to the Indiana-Illinois State line and take therefor notes and common stock in the ratio of $90 in notes and $10 in two shares of common stock as presently constituted, provided that the notes shall be specifically subordinated to the bonds and shall mature at a date later than the maturity of the bonds.

XIII. The Pipe Line Co. will cause the Panhandle Co. to deliver to the City Co. a letter signed by the president of the Panhandle Co. descriptive of its properties and the project and of the bonds in reasonable detail and in form satisfactory to the City Co. Columbia will cooperate in the preparation of such letter. From time to time the Pipe Line Co. and Columbia will cause the Panhandle Co. to furnish the City Co. with quarterly statements of operations and balance sheet in reasonable detail.

XIV. If within 15 days after written notice that payment will be required by the Panhandle Co. for the comple-

tion of its pipe line, either Columbia or the Pipe Line Co. shall fail to provide their share of the necessary funds required as provided in article VII, paragraph (a), or in article XII hereof, the party not in default may itself provide such funds and shall be entitled to receive from the Panhandle Co. therefor the same securities as would have been given to the other party so in default if it had made the advance and the right of the party in default to proceed further with such financing shall terminate.

In witness whereof, the parties hereto have executed this contract by their duly authorized officers, the day and year first above written.

By Philip G. Gossler, President.

[fol. 16592] Schedule A.—Panhandle-Eastern Pipe Line Bonds

Security.—First mortgage on all fixed property of company except so-called "operating properties" around Kansas City—term 20 years—open and in amount provided that bonds, in addition to the initial amount of series A, may be issued from time to time of the same or different series.

(a) To the extent of 50 percent of the cash cost or fair value of property constructed or acquired and subject to the lien of the first mortgage in excess of the first $40,000,000 expended upon said mortgaged properties, and,

(b) For issuance of bonds subsequent to October 1, 1933, if net earnings, after all operating expenses, deple-

tion, and depreciation charges, for 12 months out of the 15 months immediately preceding the date of issue of additional bonds, shall have been in each case, at least twice the total annual interest charges on the amount of bonds outstanding and proposed to be issued.

Initial issue.—$20,000,000, principal amount, series A bonds, to be dated October 1, 1930, and to mature October 1, 1950, with interest at the rate of 6 percent per annum payable semiannually, in the usual denominations and with the usual provisions regarding taxes, namely, that the company shall pay the normal Federal income tax of 2 percent and Pennsylvania, Connecticut, Maryland, and California security or personal property taxes, and Massachusetts and Wisconsin income taxes, not exceeding 6 per cent. Bonds to be redeemable during the first 15 years of their life at 105 and thereafter at a premium decreasing ½ percent for each year.

Disposition of proceeds.—Proceeds of original issue of bonds to be left with trustee and drawn down to the extent of 100 percent of the cash cost or fair value of property constructed or acquired after August 31, 1930, and subject to the lien of the first mortgage.

Sinking fund.—Beginning April 1, 1933, and semiannually thereafter, the company shall retire either by purchase or redemption on each semiannual interest date $300,000, principal amount of bonds of series A. As an additional sinking fund in any year in which the company pays cash dividends aggregating in excess of $1,000,000, a sum in cash equivalent to the excess dividends so paid shall be utilized in the purchase or redemption of bonds.

Retirement covenant.—All of the series A bonds shall be retired by redemption or purchase through the sinking fund in the event there is any permanent retirement of the investment made or to be made by the common stock interests in the company represented by stock or subordinated notes.

[fol. 16593] New York, N. Y., September 30, 1930.

It is agreed that the closing date mentioned in a certain contract between the undersigned, dated September 17, 1930, be extended to October 14, 1930.

MISSOURI-KANSAS PIPE LINE CO.,
By Frank P. Parish, President.

THE NATIONAL CITY CO.,
By J. P. Ripley, Vice President.

COLUMBIA OIL & GASOLINE CORPORATION,
By P. G. Gossler, President.

New York, N. Y., October 8, 1930.

It is agreed that the closing date mentioned in a certain contract between the undersigned, dated September 17, 1930, which has been extended to October 14, 1930, be further extended to October 22, 1930.

MISSOURI-KANSAS PIPE LINE CO.,
By Frank P. Parish, President.

THE NATIONAL CITY CO.,
By J. P. Ripley, Vice President.

COLUMBIA OIL & GASOLINE CORPORATION,
E. Reynolds, Jr., Vice President.

Memorandum of agreement dated October 23, 1930, between Columbia Oil & Gasoline Corporation (hereinafter called the "Oil Co.") Missouri-Kansas Pipe Line Co. (hereinafter called "Missouri-Kansas"), and the National City Co. (hereinafter called the "City Co.").

The parties hereto have executed a contract under date of September 17, 1930 (hereinafter called the "contract"), as amended by subsequent agreements. Said contracts in article VIII thereof provides for the method in which the

price per share of stock of the Panhandle Eastern Pipe Line Co. (hereinafter called "Panhandle"), to be purchased by the Oil Co. under the provisions of the contract, shall be ascertained.

First. In adjustment of a dispute existing between the parties as to the amount required to be paid by the Oil Co., under the contract for said shares of Panhandle stock, it is agreed that the computation of the purchase price per share of Panhandle stock to be purchased by Columbia is to be computed exactly as set out in article VIII of the contract, except that the figure of $7,333,000 [fol. 16594] therein mentioned shall be reduced to $6,453,000 and the computation of interest therein provided for shall be correspondingly adjusted. The purchase price per share of Panhandle's stock to be paid by Columbia as of the date hereof, before calculating interest from August 31, 1930, is accordingly $1,938.58⅔.

Second. The book value of the property to be transferred by Missouri-Kansas to Panhandle, according to article IV (a) of the contract shall be not less at the closing date than on August 31, 1930 with revaluation of any of the items. Under date of October 22, 1930, Arthur Andersen Co. advised Columbia and Missouri-Kansas that the book value of the items referred to, exclusive of investments, was as follows:

Particulars—August 31, 1930

Book value of assets to be transferred by Missouri-Kansas Pipe Line Co. to Panhandle Eastern Pipe Line Co. (paragraph (a) article IV):

Gas purchase and sales contracts, stated at valuation determined by Messrs. Brokaw, Dixon, Gerner & McKee, geologists and petroleum engineers, and approved by board of directors	$1,106,250.00
Pipe lines, compressors, etc., exclusive of Kentucky division properties	2,417,948.52
Prepaid accounts	3,565.19
Materials and supplies at book values	46,140.41

They further state, with reference thereto, as follows: "The book value of the properties located in Kentucky and Southern Indiana have been determined as accurately as was possible in the time available. As noted above, the book value of the Kentucky division properties has been excluded in the foregoing tabulation at both dates."

Third. The rights and obligations of the parties under the said contract of September 17, 1930, as heretofore and hereby amended, are in full force and effect, notwithstanding the failure of the parties to close the transaction covered thereby on October 22, 1930. The date of October 23, 1930, is the closing date.

Witness the signatures of the above parties.

COLUMBIA OIL & GASOLINE CORPORATION,
By E. Reynolds, Jr., Vice President.

MISSOURI-KANSAS PIPE LINE CO.,
By Frank P. Parish, President.

THE NATIONAL CITY CO.,
By J. P. Ripley, President.

Findings and Opinion of the Commission

For Release in Morning Newspapers of Wednesday, April 1, 1942

Securities and Exchange Commission
Philadelphia

Holding Company Act
Release No. 3415

In the Matter of

Columbia Gas & Electric Corporation, Columbia Oil & Gasoline Corporation, Panhandle Eastern Pipe Line Company, Michigan Gas Transmission Corporation, Indiana Gas Distribution Corporation, The Ohio Fuel Gas Company.

File Nos. 59-33, 70-268, 70-371, 70-387, 70-430, 70-431

(Public Utility Holding Company Act of 1935)

Integration of Holding Company System

Where subsidiary company engaged in business of producing, purchasing, transmitting, and selling natural gas buys only a very minor portion of its gas from, sells no gas to, and has no operating interrelationship with any other company in the holding company system, held that non-utility properties of subsidiary are not reasonably incidental, or economically necessary or appropriate to the operations of any integrated utility system retainable by

the holding company; that the utility properties of the subsidiariary cannot be regarded as part of any retainable integrated utility system of the holding company; and that under Section 11 (b)-(1) the subsidiary must be divorced from the holding company system.

Distribution of Voting Power Among Security Holders

Disproportion between Investment and Voting Power

Where preferred stock which represents only 1.32% of total capitalization and 2.35% of capital stock and surplus carries with it the right to elect two directors and a share-for-share vote on all other matters, held that such voting rights are in disproportion to the interest which the stock represents; that the circumstances under which the voting power was acquired are not controlling if, in fact, disproportion exists at the time the issue is presented to the Commission; that at the present time such voting rights constitute an unfair and inequitable distribution of voting power; and that under Section 11 (b) (2) the votings rights must be canceled.

[fol. 16600] Appearances:

William R. Nowlin and Sidney Willner, for the Public Utilities Division of the Commission

William H. Button, James B. Alley, and Charles R. Lowther, for Columbia Oil & Gasoline Corporation.

Wayne Johnson, Jr., and Edward S. Pinney, William Wemple, and Frederick S. Beebe, of Cravath, DeGersdorff, Swaine & Wood, for Columbia Gas & Electric Corporation.

Robert J. Bulkley, Arthur Logan, Russell Hardy, and Richard B. Hand, for Missouri-Kansas Pipe Line Company.

Edwin N. Goodwin and William L. Glenn, for Panhandle Eastern Pipe Line Company.

J. G. Laylin and John F. Meek, for W. H. Danforth.

John D. Ellis, for the City of Cincinnati.

James H. Lee, for the City of Detroit.

Kenneth L. Sater for the Public Utilities Commission of Ohio.

Eugene Bleiweiss, for Abner Goldman.

These proceedings are a consolidation of various applications and declarations filed by the above-named companies and action instituted by the Commission under Sections 11 (b) (1), 11 (b) (2), 12 (c), 12 (f), and 15 (f) of the Public Utility Holding Company Act of 1935. The history and background of the proceedings have been set forth at some length in a prior opinion (Holding Company Act Release No. 3286) and need not be repeated here. [1]

Two questions are now before us for disposition: (1) Whether Panhandle Eastern Pipe Line Company may be retained in or must be divorced from the holding company system of Columbia Gas & Electric Corporation under Section 11 (b) (1) of the Act; and (2) whether by reason of the voting rights of the Class B Preferred Stock of Panhandle Eastern Pipe Line Company there is an unfair or inequitable distribution of voting power which must be rectified under Section 11 (b) (2) of the Act.

The hearings on these two questions have been closed. Briefs have been filed and oral argument has been presented. Various subsidiary questions of jurisdiction and procedure raised by Columbia Oil & Gasoline Corporation were disposed of in our opinion and order of February 10, 1942 (Holding Company Act Release No. 3321).

[fol. 16601] I. Retention of Panhandle Eastern in the Columbia Gas System

Columbia Gas & Electric Corporation is a registered public utility holding company whose subsidiaries include gas utility companies, electric utility companies, a service

[1] See also our statement of tentative conclusions issued in response to the request of Columbia Oil & Gasoline Corporation (Holding Company Act Release No. 3296), and our memorandum opinion and order disposing of various motions filed by Columbia Oil & Gasoline Corporation (Holding Company Act Release No. 3321).

company, and companies which are engaged in the production and transmission of natural gas. The gas companies operate in Ohio, Pennsylvania, West Virginia, Kentucky, New York, Maryland, Virginia, and Indiana.

Panhandle Eastern Pipe Line Company is a subsidiary of Columbia Oil & Gasoline Corporation, which is in turn a subsidiary of Columbia Gas.[2] Panhandle Eastern is engaged in the business of producing, purchasing, transmitting, and selling natural gas. It obtains its gas from the Amarillo and Hugoton fields, and its pipe lines extend through Texas, Oklahoma, Kansas, Missouri, and Illinois to a point on the Indiana-Illinois border near Dana, Indiana, where a connection is made with the lines of Michigan Gas Transmission Corporation, a recently acquired wholly-owned subsidiary. Gas transmitted through these lines is delivered to the Michigan Consolidated Gas Company, a non-affiliate which serves the City of Detroit. Indiana Gas Distribution Corporation, a recently acquired wholly-owned subsidiary of Panhandle Eastern, owns spurs along the Michigan Gas Transmission lines and sells gas at retail in Michigan and Indiana to approximately 1,800 customers, including one large industrial company. Illinois Natural Gas Company, also a wholly-owned subsidiary of Panhandle Eastern, sells gas at wholesale in Illinois. Panhandle Eastern also controls another small line running from Indiana into Ohio and back into Indiana.

There are no connections between the lines of Panhandle Eastern and its subsidiaries and those of any other company in the Columbia Gas system, except for a connection with a line of The Ohio Fuel Gas Company (a Columbia Gas subsidiary) in Ohio. At that point there is a connection separated by a valve which is normally closed. The interchange of gas between Ohio Fuel and the Panhandle Eastern lines is negligible and there are no billings for such interchange. Panhandle Eastern and its subsidiaries buy no other gas from, sell no gas to, and have no operating interrelationship with any other com-

[2] See Panhandle Eastern Pipe Line Company, et al., 9 S. E. C. [illegible] (1941), Holding Company Act Release No. 2778.

pany in the Columbia Gas system. The entire capacity of Panhandle Eastern and its subsidiaries is required for its own customers.

All parties to the proceedings and all persons who have been heard appear to agree that the properties of Panhandle Eastern and its subsidiaries bear no operating relationship to any other properties in the Columbia Gas system and must be divested from the system. Counsel for Columbia Gas have taken the position that they are "willing not to oppose an order of divestiture so long as that order of divestiture was directed not only to Columbia Gas but to Columbia Oil as well." Counsel for Columbia Oil stated at the argument before us: "We want Panhandle out of the Columbia Gas system, but we want the cut between Columbia Gas and Columbia Oil, rather than between Columbia Oil and Panhandle."

[fol. 16602] At this stage of the proceedings we are not concerned with the method by which Panhandle may be divorced from the Columbia Gas System. The question before us at this time is whether, under Section 11 (b) (1), we should require that there be divestment. On the basis of the record we find—and apparently all the parties agree—that the properties of Panhandle Eastern and its subsidiaries bear no operating relationship to the properties of any other company in the Columbia Gas system, specifically that the non-utility properties of Panhandle Eastern and its subsidiaries are not reasonably incidental, or economically necessary or appropriate to the operations of any integrated utility system retainable by Columbia Gas and that the utility properties cannot be regarded as part of any retainable integrated utility system. Accordingly, we find that Section 11 (b) (1) of the Act requires Panhandle Eastern and its subsidiaries to be divorced from the Columbia Gas system. Since Columbia Gas' interest in Panhandle Eastern is held through Columbia Oil, our order will be directed against both Columbia Gas and Columbia Oil. However, we again emphasize that we are not at this time expressing any opinion as to whether divestment should be accomplished by severance between Columbia Gas and Columbia Oil, between Columbia Oil and Panhandle Eastern, or in some other man-

her. The method of divestment will be the subject of future hearings.

II. The Voting Rights of Panhandle Eastern's Class B Preferred Stock

The remaining question to be decided at this time is whether it is necessary or appropriate to require under Section 11 (b) (2) that Panhandle Eastern take steps to rectify any unfair and inequitable distribution of voting power among its security holders.

As of September 30, 1941, the pro forma capitalization of Panhandle Eastern based upon the contemplated acquisitions and security issues which were subsequently consummated was, as follows:

Funded Debt	
First Mortgage Series A, 1946-1950	$ 6,250,000
First Mortgage Series B, S. F. 3's 1960	12,000,000
First Mortgage Series C, S. F. 3's 1962	10,000,000
Serial Notes, 1942-1945	5,000,000
Leasehold Purchase Obligation	14,256
	$33,264,256
Preferred Stock	
Class B—10,000 shares	$1,000,000
Cumulative Preferred—150,000 shares	15,000,000
	$16,000,000
[fol. 16603] **Common Stock and Surplus**	
Common Stock—807,367 shares	20,184,175
Earned Surplus	6,323,041a
	$26,507,216
	$75,771,472

a $2,081,485 of debt discount and expense and call premiums have been written off since September 30, 1941, and have consequently been deducted from this surplus figure.

Of the 807,367 shares of common stock, 404,326 shares, or 50.1%, are held by a trustee for the benefit of Columbia Oil; 339,475 shares, or 42%, are owned by Missouri-Kansas Pipe Line Company (Mokan); and the remaining 7.9% is distributed among 1,700 shareholders. The 150,000 shares of cumulative preferred stock were recently issued for distribution to the public pursuant to applications and declarations filed with us. [3]Columbia Oil is the beneficial owner of the entire block of Class B preferred.

The Class B stock, all of which is beneficially owned by Columbia Oil, represents an interest of $1,000,000 in Panhandle Eastern, or 1.32% of its total capitalization and 2.35% of its capital stock and surplus. This stock carries with it the right to elect two directors of Panhandle Eastern and a share-for-share vote on all other matters. At present there are nine directors of Panhandle Eastern but the charter would seem to permit a revision of the by-laws to change this number.

The circumstances incident to the issuance of this B stock have been explained in an earlier opinion. [4]Prior to the time the stock was issued Columbia Gas and Columbia Oil were the defendants in anti-trust litigation instituted by the Department of Justice. In that litigation it was charged that the defendants were dominating and controlling the management and operation of Panhandle Eastern for the purpose of preventing competition between that company and Columbia Gas, and were thereby creating a restraint of trade in violation of the anti-trust laws. At the same time Columbia Gas and Columbia Oil were also defendants in an action brought by Mokan under the anti-trust laws for treble damages. Panhandle Eastern, moreover, was in severe financial difficulties. In the course of negotiations for a settlement of both the anti-trust actions, Panhandle Eastern was reorganized and refunded. As an incident of the refunding operation, Columbia Oil, upon surrender of $11,000,000 of convertible preferred stock of Panhandle Eastern, received the Class B Stock in question and a Class A Cumulative Participating

[3]See Holding Company Act Release No. 3286.

[4]Holding Company Act Release No. 3286.

Preferred Stock in an amount of $10,000,000. The Class A stock has now been redeemed. Consequently, any equity which may have existed in endowing the Class B stock with the voting privileges described above, and in thereby affording some protection for the $11,000,000 interest, has now been dissipated by the redemption of 90% of that sum. The voting power of the B Stock now remains as a pure device to insure control.

[fol. 16604] In attempting to justify the retention of this voting power, however, counsel for Columbia Oil has urged that Columbia Oil paid adequate consideration therefor and that the only interested parties at the time of the stock issuance acquiesced in its grant. Counsel has also argued that the investors who have since purchased the common stock of Columbia Oil acquired their interests subject to the settlement agreement creating the stock.

We cannot agree with this contention. Acceptance of Columbia Oil's argument would, to a considerable extent, nullify Section 11 (b) (2), for there are few instances in which an existing unfair and inequitable distribution of voting power does not have its origin in the corporate structure created at the organization of the corporation, and all stockholders buying into the corporation thereafter might be presumed, in the same sense that they are here, to have acquiesced in the existing corporate structure. Voting power is generally fixed by the promoters and managers at a time when the public investor is in no position to assert a claim to a fair share of the management of a corporation. If the allocation of voting power under these circumstances is to be considered a contract which subsequent investors cannot question and which the Commission cannot question on their behalf, then Section 11 (b) (2) would become almost wholly meaningless. [5]Section 11

[5]In connection with Columbia Oil's argument that all interested parties in Panhandle Eastern have acquiesced in the present distribution of voting power, it may also be appropriate to point out that a new investing interest has come into Panhandle Eastern—the investing interest which has bought $10,000,000 of preferred stock—and that this new preferred stock was issued and purchased pursuant to approval by this Commission in an opinion in which the Commission indicated that the fairness of the voting power of the new stock should be considered in light of the fact that the voting power of the Class B stock prima facie inequitable and would probably be modified in the pending proceedings under Section 11 (b) (2).

(b) (2) was designed to remove the inequities resulting from the exercise of control through disproportionately small investments. The circumstances under which the voting power was acquired are not controlling if, in fact, disproportion exists at the time the issue is presented to us. In the particular case, even if we assume that the voting power conferred by the B stock was fair and equitable at the time of the original issuance of the A and B stock to Columbia Oil, certainly a patent disproportion between the control and the investment represented by the B stock came into being on liquidation of the A stock.

We find that the voting rights of the Class B Preferred Stock of Panhandle Eastern Pipe Line Company are in disproportion to the investment which this stock represents, and that such voting rights constitute an unfair and inequitable distribution of voting power in Panhandle Eastern Pipe Line Company.

[fol. 16605] A further question remains as to what steps must be taken to rectify this unfair and inequitable distribution of voting power. In our opinion, as long as this B stock remains outstanding, the simplest and most direct method for achieving that result is to require that the voting power of the Class B stock be canceled. Our order will so provide. However, the parties may, if they so desire, submit any alternative plan of action which they deem appropriate to cure the unfair and inequitable distribution of voting power, including any plan for the retirement and redemption of the stock, and if such plan is approved, it will supersede our order in this respect.

Our findings and order herein relate only to the two questions which are now before us for disposition. The remaining issues in the consolidated proceedings will be the subject of future hearings.

An appropriate order will issue.

By the Commission (Chairman Purcell, Commissioners Healy, Pike, Burke, and O'Brien).

FRANCIS P. BRASSOR,
(Seal) Secretary.

[fol. 16606] Order Requiring Divestiture Pursuant to Section 11 (b) (1) and Redistribution of Voting Power Pursuant to Section 11 (b) (2).

United States of America
Before the Securities and Exchange Commission

At a regular session of the Securities and Exchange Commission, held at its office in the City of Philadelphia, Pennsylvania, on the 31st day of March A. D., 1942.

In the Matter of

Columbia Gas & Electric Corporation, Columbia Oil & Gasoline Corporation, Panhandle Eastern Pipe Line Company, Michigan Gas Transmission Corporation, Indiana Gas Distribution Corporation, the Ohio Fuel Gas Company,

Files Nos. 59-33, 70-263, 70-371, 70-387, 70-430, 70-431.
(Public Utility Holding Company Act of 1935).

The Commission having instituted proceedings under Sections 11 (b) (1), 11 (b) (2), 12 (c), 12 (f), and 15 (f) of the Public Utility Holding Company Act of 1935, and having ordered that evidence be taken with respect to (1) whether Panhandle Eastern Pipe Line Company may be retained in, or must be divorced from, the holding company system of Columbia Gas & Electric Corporation under Section 11 (b) (1) of the Act, and (2) whether, by reason of the voting rights of the Class B Preferred Stock of Panhandle Eastern Pipe Line Company, there is an unfair or inequitable distribution of voting power which must be rectified under Section (11) (2) of the Act;

Hearings on these two issues having been held after due notice, the Commission having heard argument with respect to the said issues, having duly considered the record and being fully advised in the premises, and having this day made and filed its findings and opinion herein;

It is Ordered, on the basis of such findings and opinion:

(1) That, pursuant to Section 11 (b) (1) of the Public Utility Holding Company Act of 1935, respondents Columbia Gas & Electric Corporation and Columbia Oil & Gasoline Corporation shall take all necessary and appropriate

steps to sever the relationship of Columbia Gas & Electric Corporation with Panhandle Eastern Pipe Line Company by disposing, or causing the disposition, in any appropriate manner not in contravention of the applicable provisions of the Act or the rules and regulations promulgated thereunder, of Columbia Gas & Electric Corporation's direct and indirect ownership, control, and holding of securities issued by and the properties of Panhandle Eastern Pipe Line Company and its subsidiaries;

(2) That, pursuant to Section 11 (b) (2) of the Public Utility Holding Company Act of 1935, the voting power of the Class B Preferred Stock of Panhandle Eastern Pipe Line Company shall be canceled, provided, however, that the respondents may, if they so desire, submit any alternative plan of action which they deem appropriate to cure the unfair and inequitable distribution of voting power, [fol. 16607] including any plan for the retirement or redemption of the said Class B Preferred Stock and, provided, further, that if such plan is approved, it will supersede our order herein in this respect;

(3) That the respondents, in accordance with Section 11 (c) of the Public Utility Holding Company Act of 1935, shall comply with this order within one year from the date of its entry.

It is provided with respect to our findings, opinion, and order herein, in their entirety and with respect to the entry, publication and service thereof, that they shall be without prejudice to the right of the Commission to enter such other further and appropriate orders, from time to time, as the Commission may deem necessary to secure compliance by the respondents with the provisions of the Act and the pertinent rules and regulations thereunder in carrying out the provisions of this order; and

It is Further Provided that jurisdiction is reserved to the Commission with respect to all issues remaining in the consolidated proceedings herein, and with respect to the institution of such further proceedings as the Commission may deem necessary or appropriate under the provisions of the Pubic Utility Holding Company Act of 1935.

By the Commission.

(Seal) FRANCIS P. BRASSOR,
Secretary.

Item	Description (A)	Estimated Cost (B)	Right of Way Tracts	
			No. Required (C)	No. Taken (D)
a.	Drill 5 wells in Panhandle Field, including acidization and liners, at a cost of	$ 106 463		None Required
b.	Install liners in 2 old wells in Panhandle Field at a cost of	916	None	
c.	Install tubing in 2 old wells in Panhandle Field costing	4 262	None	
d.	Acidize 5 old wells in Panhandle Field, costing	7 750	None	
e.	Lay well lines for 5 new wells in Panhandle Field, costing	15 395	8	7
f.	Construct 5 measuring stations for new wells in Panhandle Field, costing	3 450	None	
g.	Construct trunk gathering line, looping present line from Hansford Station South 31.1 miles, costing	672 133	45	43
h.	Increase capacity of present gathering line by looping existing lines and additional gathering lines, costing	422 464	14	8
i.	Install 2,600 additional H.P. at Sneed Station and increase cooling tower capacity, 1 additional auxiliary engine and one scrubber, costing	362 800	None	
j.	Install 1,300 H.P. at Hansford Station, costing	121 200	None	
k.	Construct 12 additional dwellings for employees, including 3 at Zofness, 3 at Hansford and 6 at Sneed, one of the Hansford dwellings being a 10-room hotel for single employees, at a cost of	81 000	None

Gas Contract

Between

Panhandle Eastern Pipe Line Company

and

Detroit City Gas Company

Dated August 31, 1935

TABLE OF CONTENTS

	Page
Dates and Parties	6892
Recitals:	
Seller, party of the first part	6893
Owns production and transmission facilities	6893
Present terminus, Illinois-Indiana state line	6893
Contemplates construction of pipe line to Detroit	6893
Buyer, party of the second part	6893
Owns and operates distribution system	6893
Desires to obtain supply of natural gas	6893
ARTICLE I—DEFINITIONS	
Sec. 1—Effective Date	6893
Sec. 2—Date of Initial Delivery	6893
Sec. 3—Day	6894
Sec. 4—Month	6894
Sec. 5—Special Industrial Customer	6894
ARTICLE II—SCOPE OF AGREEMENT	
Sec. 1—Adjustment of customers' appliances	6894
Sec. 2—Maximum daily demand	6894
Limit of amount of gas available	6894
Sec. 3—Buyer's right to additional gas available	6895
Sales to other parties in Buyer's territory	6895
Sec. 4—Maximum daily delivery required of Seller	6895
Minimum annual acceptances by Buyer	6895
Maximum daily demand of Buyer	6895
Maximum day defined	6895
Sec. 5—Separate contract for Special Industrial Customers	6896
Curtailment of service to Special Industrial Customers	6896
20,800,000 therms for Special Industrial Customers annually	6896
Sec. 6—All gas, except gas for Special Industrial Customers, to be covered by this agreement	6896

Inability to finance pipe line by Feb. 1, 1936 6897
Sec. 8—Other sources of supply 6897

ARTICLE III—TERM AND CANCELLATION OF AGREEMENT 6898

ARTICLE IV—QUALITY OF GAS

Sec. 1—Natural gasoline, butane and other extractions permitted 6898
Compression, cooling, cleaning and other processes permitted 6898
Sec. 2—Purity of gas:
(a) To be free from solids, dust, gums, etc. 6898
(b) Hydrogen sulphide 6898
(c) Sulphur 6899
(d) Moisture 6899
Sec. 3—Buyer's remedies if gas does not meet specifications 6899

ARTICLE V—MEASUREMENTS

Sec. 1—Therm to be sales unit 6900
Sec. 2—Determination of therms delivered 6900
Sec. 3—Measurements, where made:
(1) Volume to be measured at meters of Seller 6900
(2) Heat Value to be determined by calorimeters of Seller 6900
Sec. 4—Measurements, how made: Volume:
(a) Cubic foot of gas saturated with moisture 6900
(b) Barometric pressure 6901
(c) Temperature 6901
(d) Specific gravity, determined monthly 6901
(e) Humidity, determination of 6901
Measurements, how made: Heat Value 6901

ARTICLE VI—METERING EQUIPMENT

Sec. 1—Inspection of meters by Seller at Special Industrial Customers 6902
Sec. 2—Installation, operation and maintenance of 6902
Records and charts from 6902
Sec. 3—Capacity and operation of 6902
Sec. 4—Both parties to approve 6903
Sec. 5—Check measuring equipment 6903
Sec. 6—When meters are out of service, how volume is to be determined: 6903
(a) By using registration of check meters 6904
(b) By correction if percentage of error is ascertainable by calibration, test, etc. 6904
(c) By estimation 6904
Sec. 7—Testing of metering equipment 6904
Sec. 8—Correction of errors 6904
Sec. 9—Hour of daily reading 6905
Sec. 10—Preservation of records 6905

Sec. 6—Rate schedules that will stimulate sales 6919
Extension of distribution system 6919

Gas Contract

Panhandle Eastern Pipe Line Company

and

Detroit City Gas Company

Agreement made and entered into this 31st day of August, 1935, by and between Panhandle Eastern Pipe Line Company, a corporation of the State of Delaware

(hereinafter called Seller), party of the first part, and Detroit City Gas Company, a corporation of the State of Michigan (hereinafter called Buyer), party of the second part.

Buyer represents that it owns and operates a gas distribution system in and adjacent to the City of Detroit, Michigan through which it is engaged in the distribution of gas to the public, and that it desires to obtain a supply of natural gas.

Seller represents that it owns, directly or through subsidiaries, natural gas production facilities and gas purchase contracts in the States of Texas and Kansas and a natural gas transmission pipe line extending from its production area to a point on the Illinois-Indiana state line; that subject to the provisions hereof it will be able to have available at said eastern terminus of its pipe line at the Illinois-Indiana state line, sufficient quantities of natural gas to fulfill the requirements of this Agreement; and that, likewise subject, it contemplates constructing or arranging for the construction of a pipe line to connect the eastern terminus of its pipe line with Buyer's distribution system at or near the City of Detroit.

Now, Therefore, in consideration of the mutual convenants and agreements of the parties hereto as herein set forth, the parties hereto covenant and agree as follows:

Article I.

Definitions

Except where the context otherwise indicates another or different meaning or intent, the following terms are intended and used and shall be construed to have meanings as follows:

1. The "Effective Date" of this Agreement shall mean the first day of the calendar month immediately following the date when Buyer shall notify Seller in writing of the completion of the necessary adjustments to all of its customers appliances.

2. The "Date of Initial Delivery" shall mean the date on which Seller shall notify Buyer of the completion of a connecting pipe line from the eastern terminus of its exist-

ing pipe line at the Illinois-Indiana state line to the Buyer's River Rouge plant, and is ready to begin delivery of gas under this contract, which Seller agrees shall not be earlier than July 1, 1936, nor later than September 1, 1936.

3. The term "day", wherever used in this Agreement, shall mean a period of twenty-four (24) consecutive hours beginning and ending at seven o'clock A. M. Standard Time or Daylight Saving Time, whichever shall be in effect at the place of delivery.

4. The term "month", wherever used in this Agreement, shall mean the period beginning at seven o'clock A. M. Standard Time or Daylight Saving Time, whichever shall be in effect at the place of delivery, on the first day of a calendar month and ending at seven o'clock A. M. Standard Time or Daylight Saving Time, whichever shall be in effect at the said place of delivery on the first day of the next succeeding calendar month.

5. The term "Special Industrial Customer" shall mean an industrial customer for the gas supply for whom Seller and Buyer make specific agreement outside of that provided for in Article VII, Section 2 hereof.

Article II.

Scope of Agreement

1. Commencing with the Date of Initial Delivery Buyer will proceed with due diligence to make necessary adjustments of all of its customers appliances and will complete them within six months. Buyer will notify Seller in writing when the adjustment of all of its customers appliances is completed.

2. Commencing with the Effective Date of this Agreement, and for the period provided in Article III hereof, Seller agrees to sell and deliver to Buyer, and Buyer agrees to buy from Seller, all of the natural gas requirements of Buyer for distribution and sale to any and all of its present and future customers and for its own use, but not in excess of ninety million cubic feet or its equivalent, nine hundred twelve thousand six hundred therms, per day which represents all of the gas Seller now believes it can safely contract to furnish Buyer at this time.

3. In consideration of the covenant in the last preceding paragraph, Seller agrees that if at any time in the future, while this Agreement remains in force, Seller, its assignee, or any successor corporation carrying out the terms of this Agreement, has additional gas which it desires to distribute in the territory served by Buyer, Buyer shall, for the balance of the period during which this Agreement shall remain in force, have the right to purchase such gas in such amount as it is willing to take under a firm commitment and at such price and under such terms and conditions as Seller could otherwise obtain for such gas.

The Seller further agrees that if, during the period that this Agreement shall remain in force, it should sell and deliver natural gas at a price less than that charged Buyer under this Agreement to another or others than Buyer for use or resale within the territory now served by Buyer with gas purchased hereunder, it will simultaneously reduce the contract price to Buyer hereunder to the lowest price obtained by it for gas sold to such party or parties. If conditions of sale be different, the amounts being substantial, Seller shall grant Buyer the right to change this Agreement to conform to such conditions in order to obtain such lower price.

4. Seller shall not be required to supply hereunder more than 90 million cubic feet or its equivalent nine hundred and twelve thousand six hundred therms of natural gas in any one day. Buyer agrees to take and pay for not less than the following annual amounts of natural gas, commencing with the Effective Date hereof:

First Year	81,120,000 therms
Second Year	101,400,000 therms
Third Year	121,680,000 therms
Fourth Year	141,960,000 therms
Fifth year and each year thereafter	152,100,000 therms

Buyer agrees that it will not take on its maximum day more than twice the number of therms which it takes on the average day of the twelve month period to which said maximum day applies in the computation of demand

charge. The term "maximum day" is understood to be that day during either December, January, February or March of the said twelve months period upon which the greatest number of therms has been taken.

5. In the event that Buyer shall have a prospective Special Industrial Customer and shall desire to purchase natural gas to serve such customer, the parties hereto will endeavor to negotiate a separate contract to cover the price at which Seller will furnish such gas to Buyer. Each such separate contract shall depend upon Seller's having available a sufficient supply of natural gas and shall include a provision for the temporary curtailment or discontinuance of service thereunder in the event of an insufficiency of Seller's supply for other deliveries under this Agreement.

It is agreed that if Seller shall refuse to furnish Buyer up to 20,800,000 therms of gas per year to serve such Special Industrial Customers at a price not less than the commodity charge specified in Article VII, Section 2, then Buyer's obligation to take the minimum quantities specified in the next preceding Section of this Agreement shall be reduced by such quantities as Seller shall fail to supply Buyer for such industrial customers, but not to exceed 20,800,000 therms per year.

6. Except as otherwise provided in Section 5 of this Article II, all gas sold by Seller to Buyer shall be governed by all the provisions of this Agreement.

7. Inasmuch as the carrying out of this Agreement depends upon the construction of a pipe line connecting the eastern terminus of Seller's existing pipe-line at the Illinois-Indiana state line with the city of Detroit, as well as on the reinforcement of the present pipe line of Seller, since the present line of Seller is inadequate to deliver the quantity of gas called for by this Agreement without reinforcements requiring the expenditure of a large sum of money, and Seller represents that its financial position is such that it cannot construct either said connecting line or said reinforcement without outside financing, it is expressly understood and agreed that, unless the construction of such connecting line shall have been financed on or before February 1, 1936, and unless a contract shall be entered into providing for the financing of said reinforcement of Sell-

er's present pipe line before said date, this Agreement shall be null and void and no obligations hereunder shall exist on the part of either party hereto. Seller agrees to use its best efforts to arrange for financing the construction of such connecting pipe line and such reinforcement of its present pipe line, but does not undertake any firm commitment to do so. If such financing shall be arranged by said date, Seller will construct and place said connecting pipe line in condition for operation on or before the Date of Initial Delivery.

Recognizing the desire of Buyer to obtain a supply of natural gas at the earliest possible moment, as well as the importance thereof to Buyer, Seller agrees that as soon as it becomes apparent to it that it will be unable to finance the construction of the connecting pipe line or construct the same, or that a contract cannot be made for financing the reinforcement of Seller's pipe line, whereby this Agreement would become null and void, it will give to Buyer written notice of such facts and a release of Buyer from any liability hereunder leaving Buyer then free to obtain or contract for a supply elsewhere.

8. In the event that an adequate supply of natural gas sufficient to meet all of Buyer's requirements for the unexpired term of this Agreement is developed by responsible parties other than Seller and is made available to Buyer in its served territory by the actual construction of a pipe line thereto, or in the event that such a supply is similarly made available to a competitor serving and distributing gas in such territory at a schedule of rates which applied to the deliveries of gas to Buyer hereunder during the preceding twelve months would result in a lower amount than under the rates provided by this Agreement, then and in that event Buyer may give notice to Seller of such available gas and with such notice shall furnish to Seller the rate schedules aforesaid, together with other data and particulars pertinent under this Article, and Seller shall have six months after date of receipt of such notice and rate schedules, data and particulars, within which to meet such lower obtainable price of gas, and in the event of the failure of Seller to agree to modify this Agreement accordingly within said six months period Buyer shall have the option to terminate this

Agreement at any time within twelve months after expiration of said six months period upon six months written notice to Seller.

Article III.

Term of Agreement.

The term of this Agreement shall be for a period of fifteen (15) years beginning with the Effective Date and from year to year thereafter, after the expiration of said fifteen (15) year period, until cancelled on eighteen (18) months' notice in writing given by either party to the other.

Article IV.

Quality

1. Seller agrees that the gas delivered hereunder shall be natural gas (a) except that said natural gas shall at all times comply with the requirements as to purity expressed in this Agreement; (b) that Seller may extract or permit the extraction of moisture, helium, natural gasoline, butane, propane, and/or other hydro-carbons (excepting methane) from said natural gas, or may enrich said natural gas to the extent required to meet the gross heating value requirement hereof before delivery thereof to Buyer; and (c) that Seller may subject or permit the subjection of the gas to compression, cooling, cleaning and other processes to such an extent as may be required in its transmission from the wells to the point or points of delivery.

The gas delivered hereunder is assumed but not guaranteed to have a gross heating value of 1014 British thermal units per cubic foot. In no event shall the gross heating value of the gas delivered hereunder fall below 950 British thermal units per cubic foot nor exceed 1100 British thermal units per cubic foot, and the variation in gross heating value shall not be more than 100 British thermal units per cubic foot in any six months period.

2. Seller agrees that the gas delivered hereunder

(a) shall be commercially free from solid and/or liquid matter, dust, gums and or gum forming constituents;

(b) shall not contain more than one (1) grain of hydrogen sulphide per one hundred (100) cubic feet and that

this purity requirement shall be determined by quantitative test after presence of H2S has been indicated by qualitative test which shall consist of exposing a strip of white filter paper recently moistened with a solution of one hundred (100) grains of lead acetate in one hundred (100) cubic centimeters of water, to be exposed to the gas for one and one-half minutes in an apparatus previously purged, through which the gas is flowing at the rate of approximately five cubic feet per hour, the gas not impinging from a jet upon the test paper, and after this exposure the test paper is found not distinctly darker than a second paper freshly moistened with a solution not exposed to the gas;

(c) shall not contain more than twenty (20) grains of total sulphur per hundred (100) cubic feet;

(d) shall not contain an amount of moisture at any time exceeding that corresponding to saturation at the temperature and pressure of the gas in the main pipe line at a point approximately fifty (50) feet in advance of Seller's meter inlet header, and that the water shall not be present in liquid phase; provided that if Buyer or any purchaser from Buyer shall at any time be required by a duly constituted public regulatory authority to deliver to its customers gas containing less hydrogen sulphide and/or less total sulphur than above specified, Seller shall upon reasonable notice from Buyer cause the gas delivered hereunder to conform to such new requirement at Seller's expense.

3. Seller agrees that if the gas offered for delivery by it hereunder shall fail at any time to conform to any of the specifications hereinabove set forth, then Buyer may at its option refuse to accept delivery of or accept delivery of such gas and itself make changes necessary to bring such gas in conformity with such specifications, and Seller shall reimburse Buyer for any reasonable expense incurred by Buyer in effecting such changes, or for any reasonable expense otherwise incurred by Buyer by reason of the failure of the gas to conform to such specifications.

Article V.

Measurements.

1. The sales unit of the gas deliverable under this Agreement shall be the therm, consisting of one hundred thousand (100,000) British thermal units.

2. The number of therms delivered shall be determined by multiplying the number of cubic feet of gas delivered, measured on the measurement basis hereinafter specified and corrected to saturated conditions, by the gross heating value of such gas in British thermal units per cubic foot, and by dividing the product by one hundred thousand (100,000).

3. Measurements of volume and heat value of gas hereunder shall be at the following points:

Volume

(1) The volume of gas delivered by Seller hereunder shall be measured at the meter or meters of Seller, which, together with building and with all other collateral equipment required for the final determination of volume, Seller agrees to install and maintain and which will be operated by Seller at the Place of Delivery.

Heat Value

(2) The heat value of gas delivered by Seller hereunder shall be determined by a calorimeter or calorimeters of Seller which Seller agrees to install and maintain and which shall be operated by Seller at the Place of Delivery. Provided, however, that Buyer shall install and operate, at its own expense, meters to determine the volume of gas delivered each day to each of Buyer's Special Industrial Customers, the measurements to be corrected to the measurement basis specified in Section 4(a) of this Article V.

4. The measurement of volume and heat value of gas hereunder shall be made in the following manner:

Volume

(a) The unit of volume for the purpose of measurement and for the determination of gross heating value shall be one (1) cubic foot of gas saturated with moisture

at thirty (30) inches of mercury pressure and at sixty (60) degrees Fahrenheit temperature.

(b) The average absolute atmospheric (barometric) pressure shall be assumed to be fourteen and four tenths (14.4) pounds to the square inch, irrespective of actual elevation or location of the Place of Delivery above sea level or variations in such barometric pressure from time to time.

(c) The temperature of the gas passing the meters shall be determined by the continuous use of a recording thermometer so installed that it may properly record the temperature of the gas flowing through the meters. The arithmetic average of the temperature recorded each twenty-four (24) hour day shall be used in computing measurements.

(d) The specific gravity of the gas shall be determined monthly by a joint test as near the first of the month as practicable or as much oftener by a joint test as is found necessary in practice. The method of test shall be by Edwards Balance or by such other method as shall be agreed upon by the parties. The regular test at the first of the month shall determine the specific gravity to be used in computations for the measurement of gas deliveries until the end of such month or until changed by subsequent test; any special test to be applicable from the day made until changed by subsequent test. It is provided, however, that by agreement between the parties a suitable continuous method may be adopted.

(e) The relative humidity of the gas delivered hereunder shall be determined by approved methods at the beginning of delivery of gas to Buyer and at such times thereafter as may be agreed upon by both parties.

Heat Value

The gross heating value of the gas per cubic foot, as defined in Section 4 (a) above, shall be determined by taking the arithmetic average of the daily record of a recording calorimeter of a type to be mutually agreed upon, such recording calorimeter to be checked once each day, or at such other intervals as the parties may agree upon by comparison with a manually operated calorimeter of

a type approved by the U. S. Bureau of Standards and operated in accordance with methods recommended by the said Bureau. If upon any test any calorimeter shall be found to be not more than 2% in error, previous readings of such calorimeter shall be considered correct in computing the heat value of gas delivered by Seller to Buyer. If upon any test any calorimeter shall be found to be in error by more than 2%, then any previous readings of such calorimeter shall be corrected to zero error for any period which is definitely known and/or agreed upon, but in case the period is not definitely known or agreed upon, such correction shall be for a period extending over one-half the time elapsed since the date of last calibration, not exceeding a correction period of four (4) days.

Article VI

Metering Equipment

1. Buyer shall provide in all contracts with Special Industrial Customers that Seller shall have the right at all times during business hours to inspect the measuring and recording equipment of Buyer pertaining to sales to such Special Industrial Customers.

2. Each party shall have the right to be present, at its election, at the time of any installing, reading, cleaning, changing, repairing, inspecting or adjusting done in connection with the other party's measuring equipment and each party shall advise the other party of any intended major maintenance operation sufficiently in advance in order that the other party may conveniently have its representative present. The records from such measuring equipment shall remain the property of the party owning the meter, but, upon the request of either party, the party owning the meter will submit to the other party such records and charts together with calculations therefrom for the other party's inspection and verification, subject to return within ten days after receipt thereof.

3. The total capacity of the gas measuring equipment installed by Seller shall be sufficient to permit the testing and withdrawal of any individual meter from service without restricting the delivery of gas or interrupting the

measurement of gas. The installation, maintenance and operation of regulating equipment shall be such as not to affect the accuracy of the gas volume determination made from Seller's meters. The meter or meters of Seller shall be so located or protected as to assure freedom from pulsations, vibrations, or surges at the meter or meters from any cause in so far as such protection is obtainable within practicable limits mutually agreed upon to embody the best knowledge and information available.

4. Either party shall have the right to examine and approve, or object to, the plans of the other for the installation by it of such measuring equipment, and none of said installations shall be placed in service for the measurement of gas hereunder unless and until both parties are satisfied, or it shall be determined by arbitration, that such installation has been made in such manner as to permit of accurate determination of the quantity of gas to be delivered hereunder and to permit ready verification of the accuracy of measurement.

5. Seller agrees to provide without expense to Buyer check measuring equipment together with a suitable site for the location of said check measuring equipment which shall be operated by Buyer. Any property of Buyer which may be placed thereon shall be and remain Buyer's property. Such check meters and equipment shall be so installed as not to interfere with the operation of meters of Seller. Seller shall have access to such check measuring equipment at all reasonable hours but the reading, calibrating and adjusting thereof and the changing of charts shall be done only by employees or agents of Buyer. Seller shall have the right to be present, at its election, at the time of any installing, reading, cleaning, repairing, inspecting, calibrating or adjusting done in connection with such check measuring equipment or with Buyer's meters measuring gas to Special Industrial Customers. Charts and records from said check measuring equipment, together with calculations therefrom, shall be available to Seller for inspection and verification, subject to return by Seller within ten (10) days after receipt thereof.

6. If for any reason meters are out of service and/or out of repair so that the quantity of gas delivered is not

correctly indicated by the reading thereof, the gas delivered through the period such meters are out of service and/or out of repair shall be estimated and agreed upon by the parties hereto upon the basis of the best data available, using the first of the following methods which is feasible:

(a) By using the registration of any check meter or meters if installed and accurately registering;

(b) By correcting the error if the percentage of error is ascertainable by calibration, test or mathematical calculation; or

(c) By estimating the quantity of delivery by deliveries during preceding periods under similar conditions when the meter was registering accurately.

7. From time to time, and at least once each month, on a date as near the first of the month as practicable, the accuracy of Seller's measuring equipment shall be verified, at Seller's expense, in the presence of representatives of both Seller and Buyer, and the parties shall jointly observe any adjustments which are made in such measuring equipment. If either party at any time shall notify the other that it desires a special test of any meter, the parties shall cooperate to secure an immediate verification of the accuracy of the measuring equipment and joint observation of any adjustments. Each party shall give to the other notice of the time of all tests of meters sufficiently in advance of the holding of the tests in order that the other party may conveniently have its representative present.

8. If upon any test any meter is found to be not more than two per cent. (2%) fast or slow, previous readings of such meters shall be considered correct in computing the volume of gas delivered by Seller to Buyer; but the meter shall at once be properly adjusted to record accurately. If upon any test any meter shall be found to be inaccurate by an amount exceeding two per cent. (2%), then any previous readings of such meter shall be corrected to zero error for any period which is definitely known and/or agreed upon, but in case the period is not definitely known and/or agreed upon, such correction shall be for a period

extending over one-half of the time elapsed since the date of last calibration, not exceeding a correction period of sixteen (16) days.

9. The meters of Seller shall be read at seven o'clock Standard Time (or Daylight Saving Time whichever shall be in effect), in the morning of each day of each calendar month, or as near to that time as practical operating conditions will permit.

10. Each party hereto shall preserve for a period of at least five (5) years all test data, charts and other records resulting from performance by it of the terms of this Agreement.

Article VII.

Rate and Computation of Bills

1. All gas purchased by Buyer from Seller for resale to Special Industrial Customers shall be paid for at the respective prices agreed upon between Buyer and Seller for such gas.

2. For all gas purchased by Buyer from Seller hereunder, other than gas purchased for resale to Special Industrial Customers, subject to the provisions of Sections 3, 4 and 5 of this Article VII, the price shall be as follows:

Demand Charge:

For each month, a sum equal to thirty-eight cents (38c) multiplied by the maximum daily demand, as hereinafter defined. The term "maximum daily demand" shall mean the greatest number of therms delivered on any one day during the immediately preceding winter period, consisting of the months of December, January, February and March, after deducting the sum of the demands of the Special Industrial Customers provided for herein on said day, except that the demand for each month prior to the expiration of the first winter period shall be billed on the actual maximum daily demand established during the said month.

Commodity Charge:

In addition to the demand charge, the sum of one and one-half cents (1½c) per therm for the total number of

therms delivered by Seller to Buyer hereunder during such month.

If the total quantity of therms taken in any one year is less than the minimum requirement provided in Section 4 of Article II, then for the therms representing such deficiency Buyer shall pay at the same average rate per therm as it has paid for such gas as it has actually taken in said year.

3. For all gas delivered between the Date of Initial Delivery and the Effective Date, the price shall be at a flat rate of three cents (3c) per therm.

4. If, at the end of any calendar year during the term of this Agreement, it shall be found that by reason of any legislation enacted by the Federal Government, or regulations or orders of any of its governmental agencies, or, as hereinafter limited and defined, by reason of any state or local legislation, or regulations or orders of state or local governmental agencies, there has been a direct increase or decrease in the operating costs of Seller's transmission line, applicable and incidental to the gas delivered to Buyer hereunder, in respect only to the rates of wages, hours of labor, prices of materials and supplies and rates of taxation, as a result of which (computed as hereinafter set out) such operating costs have for such year just passed increased or diminished 20% or more from the costs experienced by Seller during the first twelve calendar months of operation after the Effective Date of this Agreement, then and in such event one-half of one-twelfth of the amount of such increase or decrease shall be added to or deducted from the charge for gas as provided in paragraph 2 of Article VII for each month of the ensuing year.

In computing the amount of any such increase or decrease, applicable to the gas sold to Buyer, the increases or decreases due to national legislation, regulations or orders shall be that proportion of the total amount which the gas sold to Buyer hereunder (other than to Special Industrial Customers) bears to the total gas transmitted by the Seller in its pipe line; and due to State of Michigan and local legislation, regulations or orders shall be that proportion of the total amount which the gas sold to

Buyer hereunder (other than to Special Industrial Customers) bears to the total gas transmitted and sold by Seller in said State and locality respectively.

In the event of the imposition of a production tax or other similar tax in Texas or Kansas or either of them, the increase or decrease due thereto shall be determined by first ascertaining the quantity of gas produced and/or purchased by Seller in such State and delivered to said pipe line and upon which such tax has been paid. Buyer shall be deemed to have received of such gas the same proportion thereof that the gas purchased by Buyer bears to the total gas transmitted by Seller in its pipe line. In general the applicable increase or decrease due to such State legislation, regulations or orders shall be that proportion of the increased cost which the quantity of gas sold to Buyer bears to the total quantity transmitted beyond the boundary line of such State.

Adjustments shall be made thereafter annually, at the close of each calendar year and in the same manner, but if at the end of any calendar year it be found that the increase or decrease for such calendar year, based upon the costs during the first twelve calendar months period of operation, and computed as herein provided, be less than 20%, then the charge for gas set forth in Section 2 of Article VII shall remain in force for the next succeeding calendar year.

In computing increase or decrease in taxation there shall not be considered changes in income taxes, excess profits taxes, capital stock taxes, franchise taxes or general property taxes, or such taxes as by plain provision or intent of the law are to be paid by the party taxed and not passed on to the consumer. Neither shall there be considered any increase or decrease in costs or regulation by any state or national commissions engaged purely in the regulation of utilities or carriers.

As soon as possible after the close of each calendar year Seller shall furnish Buyer with a computation showing the increase or decrease in such operating costs, and such amount as it claims the charges for gas should be increased or decreased for the ensuing year. For the purpose of determining the accuracy of such computation and

the facts upon which it is based, Buyer shall have the right at any reasonable time or times, by its duly authorized agents or accountants, but no more than once a year, to audit the pertinent records and books of account of Seller, and of any successor carrying out this Agreement.

5. As Seller's share in Buyer's cost of changing over its distribution system to adapt it to the distribution of natural gas or mixed gas, Seller will contribute to Buyer the sum of $220,000, by way of twelve equal monthly credits against the monthly bills to be rendered by Seller to Buyer pursuant to Article VIII of this Agreement, and during the first year immediately following the Effective Date.

Article VIII.

Billing

1. On or before the fifth day of each month, Buyer shall render to Seller a statement showing for the preceding calendar month the volume of natural gas shown by its meters to have been delivered by Buyer to each of its Special Industrial Customers.

2. Seller shall, on or before the tenth day of each calendar month, render to Buyer a statement showing the following:

(1) The total number of therms delivered by Seller to Buyer during the preceding calendar month; with complete computation showing procedure by which determined;

(2) The number of therms delivered by Buyer to each of the Special Industrial Customers during the preceding calendar month, in accordance with its aforesaid statement;

(3) The total number of therms delivered by Seller to Buyer for other than Special Industrial Customers during the preceding calendar month, in accordance with its aforesaid statements (1) and (2);

(4) The maximum daily demand applicable to the period; and

(5) The payment then due from Buyer to Seller determined as provided in this Agreement and in any other

Agreements between the parties relating to sales to Special Industrial Customers.

Such statements shall be accompanied by charts showing the basis on which the daily deliveries in therms were computed.

3. Each party shall have the right to examine at reasonable times the books, records and charts of the other party to the extent necessary to verify the accuracy of any statement, charge or computation made under or pursuant to any of the provisions of this Agreement.

Article IX.

Payments

1. Buyer agrees to pay Seller at its designated office on or before the twentieth day of each calendar month for natural gas delivered during the preceding month, according to the measurements, computations and prices herein provided and billed by Seller in the statement for said month, excepting that in the event that at any time Buyer shall dispute the correctness of any statement so rendered, then payment shall be made by Buyer for such amounts as it concedes to be correct and such amount as may be in dispute shall be settled by agreement by mutual submission to arbitration, or by court action. Any payment by Buyer shall not prejudice its right to adjustment of any bill to which it has taken exception or may subsequently take exception within a reasonable time after discovery of its right to such adjustment, but in any event within twelve (12) months from date of bill.

2. Should Buyer fail to pay the amount of any bill for gas rendered by Seller as herein provided, when such amount is due, interest thereon shall accrue at the rate of 6% per annum from the due date until the date of payment. If such failure to pay continues for 60 days after payment is due, Seller may, in addition to any other remedy it may have hereunder, suspend further delivery of gas until such amount is paid, provided, however, that if the Buyer shall, in good faith, either dispute the amount of any such bills or parts thereof, or present a counterclaim or offset against the same, and shall at any time

thereafter within thirty (30) days of a demand made by Seller, furnish a good and sufficient surety bond, in amount and with sureties to be approved by Seller, conditioned upon the payment of any amounts ultimately to be found due upon such bills after a final determination, which may be reached either by agreement, arbitration award or judgment of the courts as may be the case, then such bills shall not be deemed to be due within the meaning of this paragraph unless and until default be made in the conditions of such bond.

Except as Seller may question the ability of Buyer to respond in damages, it need not demand or require such bond and it may permit such disputed amounts to accumulate, but in the event Seller shall require Buyer to give bond then Seller shall be obligated to institute appropriate legal action to determine such dispute within one year after the date of the bills in question, or unless by agreement of the parties the matter be submitted to arbitration within such period.

3. If presentation of bill by Seller is delayed after the tenth day of the month, then the time of payment shall be extended correspondingly, unless the delay in the presentation of the bill is occasioned by the delay on the part of Buyer in furnishing a statement of the amount of natural gas delivered to Special Industrial Customers.

4 If it shall be found at any time that Buyer has been overcharged in any form whatsoever under the provisions hereof, and Buyer shall have actually paid the bills containing such overcharges, Seller shall refund such amount or amounts of overcharges within thirty (30) days of the determination thereof, with interest thereon at the rate of six per cent. (6%) per annum from the times respectively when such overcharges were paid until the date of refund, provided, however, that claim therefor shall have been made within sixty (60) days from the date of discovery of any such overcharges, but in any event within twelve (12) months of bill.

Article X.

Operations By Seller

1. Seller agrees that all construction of pipe lines shall be of adequate capacity for the delivery of gas to Buyer

in accordance with the requirements of this Agreement, but not to exceed a maximum amount of 90,000,000 cubic feet of gas per day or its equivalent nine hundred and twelve thousand six hundred therms.

2. In addition to the sources of supply, contracts for the purchase of gas, and transmission facilities which Seller represents it now holds or has available through subsidiaries, Seller agrees at all times to hold or have available through subsidiaries, sufficient gas acreage and gas production facilities to meet the requirements of this Agreement and its other obligations for the sale of gas and to have sufficient gas available and/or to hold long term gas purchase contracts with responsible parties calling for the sale and delivery to it of gas in sufficient quantities for the aforesaid purposes and to own or have available through subsidiaries or contract rights a system of pipe lines which shall be of adequate size for the transmission of gas from the various sources of supply to the Place of Delivery hereunder.

3. It is further understood and agreed that Buyer is a public utility company operating in the metropolitan area of Detroit, Michigan, and that, inasmuch as one of its most important obligations is to supply the City of Detroit and its environs with gas, Seller shall operate its pipe line, or cause the same to be operated in such manner as to assure, as nearly as is reasonably possible, continuous supply of gas in the quantity and of the quality required by this Agreement.

Article XI.

Buyer's Facilities

1. Buyer agrees to make such changes in its distribution system as may be necessary to enable it to distribute natural gas and agrees to proceed to make such changes in time to be prepared to receive deliveries of natural gas on the Effective Date.

2. Buyer agrees to give Seller notice at all times, as far in advance as operating conditions will permit, of the estimated daily, monthly and annual quantities of natural gas required hereunder and the anticipated peak hourly

demands. Buyer shall use its best judgment and experience in arriving at such estimates, but shall not be bound by the quantities thereof.

3. Buyer agrees that it will, subject to temporary or permanent outage resulting from either unavoidable deterioration or casualty, maintain in operation the storage holders which it now has, and will operate the same each day so as to assist in leveling the peak demands for natural gas to be delivered by Seller hereunder, subject, however, to the right of Buyer to keep at all times in its holders a reserve of gas of sufficient quantity to insure safe and adequate service to its customers as determined by Buyer; and Buyer will as nearly as practicable, with such storage capacity, take natural gas in equal and uniform hourly volumes. Subject to the aforesaid use by Buyer of holder capacity, Seller agrees to deliver to Buyer natural gas in accordance with the hourly and daily demands of the markets of Buyer up to but not to exceed a maximum daily demand of 90,000,000 cubic feet, or its equivalent nine hundred and twelve thousand six hundred therms.

4. Inasmuch as interruptions in the delivery of gas hereunder may, from time to time occur due to force majeure, as herein defined, or otherwise, and Buyer serving the large population and industries within the metropolitan area of Detroit, being in duty bound to maintain its present water gas generating plants in good operating condition to effect continuity of service during such periods of interrupted service on the part of Seller, and because, in order to furnish gas of substantially the heat equivalent of natural gas it will be necessary for Buyer to make large expenditures on such generating equipment, Seller recognizes and agrees that notwithstanding the covenant that Buyer will purchase from Seller all its natural gas requirements, Buyer may use its present generating plants from time to time to manufacture gas substantially equivalent in heat units to natural gas, to assist in leveling those peak demands which would otherwise increase the cost of gas under this Agreement, provided, however, that Buyer shall pay for the minimum requirements specified in Section 4 of Article II; pro-

vided, further, that nothing in this Section contained shall limit Seller's obligation to furnish Buyer's requirements for gas as elsewhere herein provided.

Article XII.

Place and Point of Delivery

The Place of Delivery for all gas to be delivered by Seller to Buyer hereunder shall be at Buyer's River Rouge plant, Greenfield and Allen Roads, in Melvindale, Michigan, except in the case of such Special Industrial Customers as shall be served directly from some other point on Seller's pipe line, as may be agreed on by the parties. The Point of Delivery shall be the outlet side of Seller's meters at the Place of Delivery and before passing through Buyer's regulators.

Article XIII.

Possession of Gas

1. As between the parties hereto, Seller shall be in control and possession of the gas deliverable hereunder and responsible for any damage or injury caused thereby until the same shall have been delivered to Buyer at the Point of Delivery, after which Buyer shall be deemed to be in exclusive control and possession thereof and responsible for any injury or damage caused thereby.

2. Each party shall indemnify and save harmless the other party on account of any and all damages, claims or actions arising out of the maintenance or operation of the property and/or equipment of the indemnifying party, the Point of Delivery of the gas as hereinbefore specified to be the point of division of responsibility between the parties.

Article XIV.

Pressure

Seller agrees to furnish gas hereunder at such pressures as Buyer may require, up to but not exceeding 100 pounds to the square inch gauge pressure, at the Point

of Delivery. Buyer agrees to install, operate and maintain at the Point of Delivery such regulating devices as may be necessary to regulate the pressure of the gas delivered hereunder. Seller agrees to use due care and diligence to furnish gas to Buyer at a uniform pressure.

Article XV.

Force Majeure

1. Neither party shall be liable in damages to the other for any act, omission or circumstance occasioned by or in consequence of any acts of God, strikes, lockouts, acts of the public enemy, wars, blockades, insurrections, riots, epidemics, landslides, lightning, earthquakes, fires, storms, floods, washouts, arrests and restraints of rulers and peoples, civil disturbances, explosions, breakage or accident to machinery or lines of pipe, the binding order of any court or governmental authority which has been resisted in good faith by all reasonable legal means, and any other cause, whether of the kind herein enumerated, or otherwise, not within the control of the party claiming suspension and which by the exercise of due diligence such party is unable to prevent or overcome.

2. Such causes or contingencies affecting the performance of this Agreement by either party, however, shall not relieve it of liability in the event of its concurring negligence or in the event of its failure to use due diligence to remedy the situation and remove the cause in an adequate manner and with all reasonable dispatch, nor shall such causes or contingencies affecting the performance of this Agreement relieve either party from its obligations to make payments of amounts then due hereunder; nor shall such causes or contingencies relieve either party of liability unless such party shall give notice and full particulars of the same in writing or by telegraph to the other party as soon as possible after the occurrence relied on.

Article XVI.

Warranty of Title to Gas.

Seller agrees that it will and hereby does warrant generally the title to all gas delivered under this Agreement

and the right to sell the same and that such gas shall be free and clear from all liens and adverse claims and that it will indemnify Buyer and save it harmless from all suits, actions, debts, accounts, damages, costs, losses and expenses arising from or out of adverse claims of any or all persons to said gas and/or to royalties, taxes, license fees or charges thereon, which are applicable before the title to the gas passes to Buyer or which may be levied and assessed upon the sale thereof to Buyer. In the event any adverse claim of any character whatsoever is asserted in respect of any of said gas, Buyer may retain the purchase price thereof up to the amount of such claim without interest until such claim has been finally determined, as security for the performance of Seller's obligations with respect to such claim under this Section, or until Seller shall have furnished bond to Buyer, in an amount and with sureties satisfactory to Buyer, conditioned for the protection of Buyer with respect to such claim.

Article XVII.

Patents

In case Buyer should wish to use gas purchased hereunder for reforming, Seller will undertake to secure for Buyer, without cost to Buyer, the right to use in the area now served by Buyer, necessary processes covered by patents which Seller can control.

Article XVIII.

Remedies

In the event that:

(a) Seller should be unable to, or fail, for a period longer than ninety (90) days to deliver gas of a standard and British thermal unit content as provided in this Agreement or which would meet the approval of any governmental agency having jurisdiction over Buyer, Buyer may by written notice to Seller cancel and terminate this

Agreement in five days, on condition that at least sixty (60) days before said notice be given, Buyer shall have notified Seller that the gas delivered, or sought to be delivered, is below standard or unacceptable to the regulatory body and that said condition has then pertained for a period of thirty (30) days.

In the event that:

(b) Seller should, for a period of five (5) consecutive days, fail to deliver to Buyer and material portion of the gas which under this Agreement it is bound to deliver, or

(c) there should be a deficiency in deliveries, caused by the failure or inability of Seller to deliver the quantity of gas which Buyer desires and is entitled to demand under this Agreement on any day of each seven (7) day period over a period of six (6) consecutive seven (7) days periods, commencing with the day on which such deficiency first occurred,

Buyer may, within two (2) weeks of the last day of any such periods provided in (b) and (c), by written notice cancel and terminate this Agreement, to be effective six (6) months from the delivery of such notice, on condition that Buyer shall have notified Seller in writing of each such daily deficiency or deficiencies within forty-eight (48) hours after the same shall have occurred.

If by reason of any of the causes enumerated in Section 1, Article XV, either party is effectively prevented or prohibited from further carrying out this Agreement, or if by reason of any order of court or governmental agency resisted by all reasonable legal means, Buyer is prevented from selling and distributing gas within the City of Detroit, then either party may by five (5) days written notice to the other party, cancel and terminate this Agreement, without liability of any kind from one to the other, excepting for such transactions and dealings as were had and completed prior to the effective date of such cancellation.

In the event that Buyer shall fail to pay any bill rendered it by Seller for gas delivered under this Agreement within sixty (60) days after the same became due, Seller may, in addition to all other remedies which it may have at law in addition to those provided herein, at any time thereafter by written notice to Buyer, cancel and terminate this Agreement, to be effective six (6) months from the delivery of such notice, provided that this remedy shall not be available or effective in case of default in the payment of disputed bills as elsewhere provided herein.

2. Any cancellation of this Agreement pursuant to the provisions of this Article XVIII shall be without prejudice to the right of Seller to collect any amounts then due it for gas delivered prior to the effective date of the cancellation, subject to any proper counter-claims or set-offs of Buyer, and without waiver of any remedy to which the party not in default may be entitled for violation of this Agreement.

3. The remedies herein specifically provided for are cumulative, and in addition to all rights and remedies for specific performance or for damages, including loss of return and profits, or otherwise, which either party may have at law or in equity for breach by the other party of any agreement, condition or covenant contained herein, which rights and remedies neither Buyer nor Seller shall in anywise be deemed to have waived either by the expressed provisions for the foregoing remedies or by the exercise of any thereof; provided, however, that in the event that this Agreement be cancelled or terminated by reason of any of the causes enumerated in Section 1 of Article XV hereof, or by reason of any order of court or governmental agency prohibiting the Buyer from distributing natural gas within the City of Detroit which has been resisted by all reasonable legal means, there shall be no liability upon the part of either party to the other, excepting such liability as remains unsettled between the parties arising from the sale of gas and such transactions as were had and completed between the parties prior to cancellation.

4. If Seller shall at any time fail to deliver gas in volumes and/or at such pressures as Buyer may require

up to the limits otherwise herein provided, Seller shall, unless relieved by the terms of Article XV hereof, reimburse and indemnify Buyer for any expenses, loss or damage which it may sustain by reason of such failure; including the expense of putting into operation any gas manufacturing equipment, and/or obtaining manufactured gas or natural gas to remedy such deficiency.

Article XIX.

Miscellaneous

1. There shall be no modification of the terms and provisions hereof except by the formal execution of supplementary written contracts.

2. No waiver by either party of any one or more defaults by the other in the performance of any provisions of this Agreement shall operate or be construed as a waiver of any future default or defaults, whether of a like or of a different character.

3. Seller may assign its rights and obligations hereunder to a corporation to be formed for the purpose of carrying out this Agreement. Either Seller or Buyer may assign the rights and obligations of this Agreement to a corporation which shall receive the assets of such assignor and obligate itself to carry out the provisions hereof binding on such assignor, in which event the assignor shall be released hereunder, but otherwise neither party shall assign this Agreement or any of its rights hereunder unless it shall first have obtained the consent thereto of the other party.

4. Any notice, request, demand, statement or bill provided for in this Agreement shall be in writing and shall be duly delivered when mailed by registered mail to the Post Office address of either of the parties hereto, as the case may be, as follows:

Seller: Panhandle Eastern Pipe Line Company, 101 West 11th Street, Kansas City, Mo.

Buyer: Detroit City Gas Company, 415 Clifford Street, Detroit, Michigan.

or at such other address as either party shall designate for the purpose.

5. This Agreement shall be binding on any company which shall succeed by purchase, merger or consolidation to the properties of the Seller or Buyer, as the case may be.

6. Buyer will adopt and use schedules and forms of rates which will in its judgment tend to stimulate sales of natural gas for domestic, industrial and commercial purposes and for house heating. Buyer will make every reasonable effort to increase and build up the sales of natural gas throughout its gas distribution system and Seller will cooperate with Buyer in accomplishing this result. Buyer agrees to make such reasonable extensions to its distribution system as would be susceptible of earning a reasonable return on the investment.

In Witness Whereof, the parties hereto have caused this Agreement to be signed by their respective Presidents or Vice-Presidents thereunto duly authorized, and their respective corporate seals to be hereto affixed and attested by their respective Secretaries or Assistant Secretaries, the day and year first above written.

PANHANDLE EASTERN PIPE LINE COMPANY,

(Exhibit 264)

Supplement 2 of Schedule 12.

Supplemental Gas Contract

Between

Panhandle Eastern Pipe Line Company

and

Detroit City Gas Company

Dated June 2, 1936.

Supplemental Gas Contract

Panhandle Eastern Pipe Line Company

and

Detroit City Gas Company.

Agreement made this 2nd day of June, 1936, by and between Panhandle Eastern Pipe Line Company, a corporation of the State of Delaware (hereinafter called Seller), party of the first part, and Detroit City Gas Company, a corporation of the State of Michigan (hereinafter called Buyer), party of the second part,

Whereas, under date of August 31, 1935, the parties entered into a contract (hereinafter called the Gas Contract) whereby, among other things, Seller agreed to sell and deliver to Buyer and Buyer agreed to buy and take from Seller all of the natural gas requirements of Buyer for distribution and sale to any and all of its present and future customers and for its own use, within the limits therein specified;

Whereas Seller is making large investments in extensions, additions and reinforcements of its existing pipeline system in order to enable it to comply with and meet the requirements of the Gas Contract, and desires Buyer to create as rapidly as possible a market for natural gas larger than that which now exists;

Whereas Buyer now represents that, under the conditions hereinafter provided, it will be able to obtain within the near future a substantial number of additional

househeating customers and thereby increase its natural gas requirements under the Gas Contract, but that the obtaining of such househeating customers will involve it in considerable expense;

Whereas Seller desires Buyer to increase its natural gas requirements under the Gas Contract through the acquisition of additional househeating customers;

Whereas Buyer contemplates maintaining and operating the storage holders and the water gas generating plants which it now has to assist in leveling peak demands for natural gas to be delivered by Seller, as set forth in Sections 3 and 4 of Article XI of the Gas Contract; and

Whereas, upon condition that Buyer shall sell and distribute gas having a heating value approximately equal to the heating value of the natural gas delivered by Seller to Buyer, the parties hereto have concluded to enter into this Supplemental Contract;

Now, Therefore, in consideration of the mutual covenants and agreements of the parties as herein set forth, the parties hereto covenant and agree as follows:

Article I

Definitions

Except where the context otherwise indicates another or different meaning or intent, the following terms are intended and used and shall be construed to have meaning as follows:

1. The term "Househeating Customer" shall mean a customer of Buyer who uses no other kind of fuel than gas for his space heating purposes and who purchases gas from Buyer under Buyer's rate schedule applicable to such customers.

2. The term "Househeating Purposes" shall apply to that portion of the gas sold by Buyer to its Househeating

Customers which shall be used by them for space heating purposes.

3. The term "Average Number of Househeating Customers" served during any calendar month shall mean one-half of the total number of Househeating Customers actually receiving househeating service on the last day of the calendar month preceding the calendar month in question plus one-half of the total number of Househeating Customers actually receiving househeating service on the last day of the calendar month in question.

4. The term "Winter Period" shall mean a period consisting of the four consecutive months of December, January, February and March.

5. The term "Total Measured Deliveries" for any given day shall mean the total number of therms of natural gas delivered by Seller to Buyer on that day at the Point of Delivery specified in the Gas Contract, exclusive of gas sold by Seller to Buyer and resold to Special Industrial Customers.

6. The term "Degree Day Deficiency" for any day shall mean the number of degrees the mean outside temperature for that day is below 65° Fahrenheit. The term "Degree Day Deficiency" for any other period shall mean the sum of the Degree Day Deficiencies for that period. The outside temperature shall be the 24-hour mean of outside temperature reported by the United States Weather Bureau at Detroit, Michigan.

7. The term "Factor K" shall mean the number of therms of gas which the average Househeating Customer is deemed to take for Househeating Purposes per unit of Degree Day Deficiency and shall be fixed for the purposes of this contract at .31 until changed as hereinafter provided.

8. The term "Househeating Daily Delivery of Buyer" shall mean the number of therms of gas calculated to have been sold by Buyer for Househeating Purposes on any given day during a month, determined by multiplying the

Degree Day Deficiency for that day by the Factor K, and multiplying this product by the Average Number of Househeating Customers served during that month, determined as described in Section 3 of this Article I.

In order to limit the extent of the application of the special rate for Househeating Purposes herein provided for, it is agreed that the Average Number of Househeating Customers used as a factor for the purpose of the computations to be made under this Section shall not exceed 6,000 in connection with each of the months prior to May, 1937, 10,000 in connection with each of the months after April, 1937 and prior to May, 1938, 13,000 in connection with each of the months after April, 1938 and prior to May, 1939, 16,000 in connection with each of the months after April, 1939 and prior to May, 1940 and shall never exceed 20,000, even if the actual Average Number of Househeating Customers in any month is greater than 20,000.

9. The term "Base Load" for any given day shall mean (a) the total number of therms of gas (other than gas sold to Special Industrial Customers) sent out by Buyer on that day minus the Househeating Daily Delivery of Buyer for that day or (b) the Total Measured Deliveries for that day, whichever shall be less.

10. The term "Househeating Daily Delivery of Seller" shall mean the number of therms, if any, by which the Total Measured Deliveries for any given day exceed the Base Load for that day.

11. The term "Base Load Maximum Demand" shall mean the Base Load delivered on that day of the preceding Winter Period on which the delivery of Base Load was a maximum.

12. Prior to the end of the first Winter Period following the "Effective Date" of the Gas Contract, the "Base Load Maximum Demand" shall mean the Base Load delivery on that day on which the delivery of Base Load was a maximum.

Article II

Billing Basis

1. From the "Effective Date," as defined in the Gas Contract, until the date of termination of this Supplemental Gas Contract, as hereinafter set forth, the Demand Charge for each month, in lieu of the Demand Charge set forth in Section 2 of Article VII of the Gas Contract, shall be an amount equal to 38c multiplied by the sum of (a) the established Base Load Maximum Demand, and (b) twice the average Househeating Daily Delivery of Seller for the current billing month. Monthly payments by Buyer to Seller shall be made on the basis of the modified Demand Charge hereinabove provided and the Commodity Charge as set forth in the Gas Contract; provided, however, that if for any twelve-months' period ending on March 31 in any year (or for a period of less than 12 months commencing on the Effective Date of the Gas Contract and ending on March 31, 1937), the total payments due to Seller for natural gas, other than that purchased for resale to Special Industrial Customers, calculated on the foregoing basis shall exceed the total amount that would have been payable for such period if calculated pursuant to the provisions of the Gas Contract unaffected by this Supplemental Gas Contract, then Seller shall refund to Buyer an amount equal to such excess by credit against the monthly payment due in the succeeding month.

2. On or before June 1st of each year during the life of this Supplemental Gas Contract, a redetermination of the accuracy of Factor K shall be made by two engineers or representatives, one designated by each of the parties hereto. Such redetermination shall be made in the light of the data which Buyer shall procure as to the average number of therms of gas consumed by Househeating Customers per unit of Degree Day Deficiency in the territory served by Buyer during the heating season just ended and during prior heating seasons. If such redetermination discloses that the Factor K is inaccurate, said engineers or representatives shall fix and agree upon the correct value of the Factor to be applied during the ensuing heating season, and such new value shall be binding on both parties during the ensuing heating season, and thereafter until changed as herein provided.

In the event that the said engineers or representatives shall fail to agree, they shall select an impartial engineer whose decision on the question or questions involved shall be final and shall be binding on both parties during the ensuing heating season and thereafter until changed as herein provided.

For the purpose of providing actual operating data by means of which the accuracy of Factor K may be redetermined, Buyer agrees to install in the houses of at least one per cent of its Househeating Customers separate meters for the determination of the amount of gas sold to such customers for Househeating Purposes. Such customers shall be selected in such manner as to give a representative cross section of the consumption of Buyer's Househeating Customers.

4. On or before the fifth day of each month, Buyer shall render to Seller a statement showing for the preceding calendar month all data (other than the total daily and monthly deliveries of natural gas by Seller to Buyer) necessary to enable Seller to make the computations called for by the provisions of this Article II.

5. Representatives of Seller shall have the right at all reasonable times to inspect, audit and check the records of Buyer for the purpose of verifying or correcting any of the statements rendered to Seller by Buyer pursuant to the provisions of Section 4 of this Article II.

Article III

Buyer's Covenant

1. Buyer agrees promptly to inaugurate a campaign and deligently to continue its efforts to induce customers in the territory served by Buyer to install the necessary equipment and to use natural gas for heating their houses.

Article IV

New Special Househeating Customers

1. For Househeating Customers obtained by Buyer, whose premises are heated solely by gas through the means of a central heating system (hereinafter in this

Article IV referred to as "Special Househeating Customers") in addition to those Buyer has obtained prior to May 1, 1936, Seller will pay to Buyer, within the dates and limits hereinafter specified, the amounts set forth in the following table:

Obtained during period			Total payment per new customer	
Commencing	Ending			
May 1, 1936	April 30 1937	$10 00	Not exceeding	5,000 customers
" " 1937	" " 1938	8 00	" "	4,000 "
" " 1938	" " 1939	6 00	" "	3,000 "
" " 1939	" " 1940	4 00	" "	3,000 "
" " 1940	" " 1941	2 00	" "	3,000 "

2. As soon as practicable after the execution of this Supplemental Gas Contract, Buyer shall furnish to Seller a statement of the number of its Special Househeating Customers on May 1, 1936. On or before the 10th day of the month following the rendition of the aforesaid statement, and on or before the 10th day of each calendar month thereafter, to and including the month of May, 1941, Buyer shall furnish to Seller a statement of the total number of new Special Househeating Customers obtained subsequent to the 1st day of May next preceding the month for which such statement is rendered and actually connected to its distribution system on the last day of the preceding calendar month.

3. The payments above specified shall be made per new Special Househeating Customer, by credit against the monthly statement rendered in August following the close of the yearly period in question for natural gas sold by Seller to Buyer under this Agreement. No payments shall be made pursuant to this Section 3 in respect of new Special Househeating Customers obtained after April 30, 1941.

Should Buyer obtain fewer new Special Househeating Customers in any year than the maximum for which Buyer would be entitled for such year to receive the payments above specified, the number for which Buyer would be entitled for the succeeding year to receive the payments for the succeeding year shall be increased by the arithmetic deficit of the previous year. Except as the maximum number of new Special Househeating Customers for which

Buyer would be entitled for any year to receive the payments above specified may be increased as provided in this paragraph, no payments shall be made at any time on account of new Special Househeating Customers obtained by Buyer in any year in excess of the maximum number set forth in the foregoing table.

4. Payments in any year shall be based on the monthly average of the monthly totals of the number of new Special Househeating Customers to whom such payments are applicable. Said average shall be determined from Buyer's records and the monthly statements referred to in Section 2 of this Article IV.

5. Representatives of Seller shall have the right at all reasonable times to inspect, audit and check the records of Buyer for the purpose of verifying or correcting statements of Buyer concerning number of new Special Househeating Customers secured or actually served during any period in question.

Article V

Termination

If Buyer shall fail to sell and distribute gas having a heating value approximately equal to the heating value of the natural gas delivered by Seller to Buyer under the Gas Contract, this Supplemental Gas Contract shall terminate and be automatically cancelled and thereafter all payments for such natural gas shall be made pursuant to the provisions of Article VII of the gas contract. In no event shall the life of this Supplemental Gas Contract exceed the life of the Gas Contract.

Article VI

Miscellaneous Provisions

1. Seller shall not be required, by reason of anything contained herein, to supply in the aggregate hereunder and under the Gas Contract, more than 90,000,000 cubic feet or its equivalent, 912,600 therms, of natural gas in any one day.

2. All of the provisions of the Gas Contract, except in so far as they are inconsistent herewith, shall be applicable

to natural gas sold and purchased for Househeating Purposes hereunder.

In Witness Whereof, the parties hereto have caused this Agreement to be signed by their respective Presidents or Vice-Presidents thereunto duly authorized and their respective corporate seals to be hereto affixed and attested by their respective Secretaries or Assistant Secretaries the day and year first above written.

[fol. 16686] Petition.

(Received February 28, 1941, Federal Power Commission.)

Before the

Federal Power Commission.

City of Detroit and County of Wayne, Municipal Corporations, Complainants,

No. G-200 vs.

Panhandle Eastern Pipe Line Company, and Michigan Gas Transmission Corporation, Defendants.

Petition

To the Honorable Members of the Federal Power Commission:

The City of Detroit and the County of Wayne, municipal corporations in the State of Michigan, respectfully show:

First: The complainants are the City of Detroit, a municipal corporation, and the County of Wayne, a municipal corporation, both established and existing under and by virtue of the laws of the State of Michigan, and both of which are municipalities within the meaning of the Federal Natural Gas Act. Said petitioners represent the interest of the customers of Michigan Consolidated Gas Company which distributes natural gas having its source in Texas and Kansas to approximately 450,000 residential, house heating, commerical and industrial customers in the City of Detroit and in and throughout the County of Wayne, in the State of Michigan.

[fol. 16687] Second: The defendant, Panhandle Eastern Pipe Line Company, is a corporation organized and existing under the laws of the State of Delaware, and is engaged in the transmission and sale of natural gas in interstate commerce, transporting said gas from fields in the states of Texas and Kansas to the lines of Michigan Consolidated Gas Company, in the County of Wayne, State of Michigan, in the vicinity of the City of Detroit, and said Panhandle Eastern Pipe Line Company sells said natural gas to said

Michigan Consolidated Gas Company at said point of delivery aforesaid.

Third: Michigan Gas Transmission Corporation is a corporation organized and existing under the laws of the State of Delaware, and is a natural gas company as defined by the Federal Natural Gas Act, being engaged in the transmission of natural gas from the State of Indiana in and to the State of Michigan, and that said Michigan Gas Transmission Company is engaged in the transportation of the natural gas being sold by Panhandle Eastern Pipe Line Company to Michigan Consolidated Gas Company, transporting said natural gas from the Illinois-Indiana state line to said distribution system of Michigan Consolidated Gas Company near the City of Detroit in the County of Wayne, performing said transportation service for said Panhandle Eastern Pipe Line Company under contract. Said Michigan Gas Transmission Corporation is affiliated with said Panhandle Eastern Pipe Line Company in that both of said companies are controlled by Columbia Gas and Electric Company.

Fourth: The rates and charges of said Panhandle Eastern Pipe Line Company to Michigan Consolidated Gas Company are governed by a certain contract dated August 31, 1935, between Panhandle Eastern Pipe Line Company and Detroit City Gas Company, the predecessor of Michigan Consolidated Gas Company, as amended by supplemental agreements. Under the terms of said contract as supplemented, there is provided a demand charge of 58 cents per therm per month, based upon the maximum daily demand in the months of December, January, February and March, and a commodity charge of 1.5 cents per therm. [fol. 16688] A special provision is made in respect to computing the cost of gas for house heating customers up to a maximum of 25,000 customers. There are at the present time approximately 40,000 house heating customers and there are available a large number of additional customers for house heating gas.

Fifth: Under the terms of said contract, the cost of gas to Michigan Consolidated Gas Company cannot be definitely known, but said average cost has varied from a low of approximately 32 cents per thousand cubic feet of natural

gas, to upwards of 34 cents. The cost of house heating gas for the first 25,000 customers has been approximately 41 cents per thousand cubic feet, but for customers in excess of 25,000, the price of said gas as the same may be estimated, will be approximately 62 cents per thousand cubic feet. The exact price of said gas cannot be known until the maximum day's delivery during the winter season of 1940-1941 is ascertained, and the demand charge computed upon said maximum delivery will be applicable for one year from and after April 1st, 1941.

Sixth: Your petitioners charge that the cost of gas to said Michigan Consolidated Gas Company is excessive and that the rates and charges maintained by Panhandle Eastern Pipe Line Company and the division thereof to Michigan Gas Transmission Corporation are unjust and unreasonable as the same affect the interest of domestic and house heating customers of Michigan Consolidated Gas Company for said gas, and said rates, charges and divisions are unjust and unreasonable as they affect the rates and charges of said Michigan Consolidated Gas Company in the commercial and industrial classifications.

Seventh: Said Panhandle Eastern Pipe Line Company, in violation of the provisions of the Natural Gas Act, maintains an unreasonable difference in rates and charges as between house heating customers, and has adopted a general system and plan whereby a demand for house heating service should be fostered, and when said demand should result in the acquisition of substantially more than 25,000 [fol. 16689] customers, a marked increase in cost for such additional customers should ensue, with the result that the claim would arise on the part of Michigan Consolidated Gas Company for a general increase in the house heating rate. That such claim has already materialized and has found favor with the Michigan Public Service Commission, the body having the authority to fix rates for Michigan Consolidated Gas Company, and said Michigan Public Service Commission has granted an increase in said house heating rate and has predicated said increase upon the additional cost of gas to serve house heating customers in excess of 25,000, as provided by the contract above referred to.

Eighth: Wherefore, the complainants pray for an investigation by the Federal Power Commission, a finding that the rates and charges of said Panhandle Eastern Pipe Line Company are unjust and unreasonable, are unlawfully preferential and work undue prejudices and disadvantages, and that said rates shall be reduced below the present schedules, and that a fair and reasonable rate shall be established in respect to natural gas sold and transmitted by the defendants for the use of customers in said Detroit district and in said County of Wayne, and that the demand charge feature practiced by said defendants may be prohibited.

[fol. 16691] From the Corporation Counsel

February 19, 1941.

To the Honorable, the Common Council:

Gentlemen—In conjunction with the investigation made by this Department incidental to the natural gas rate schedules, we have done considerable work with reference to the so-called gate rate contracts between the Detroit City Gas Company (now Michigan Consolidated Gas Company), and the Panhandle Eastern Pipe Line Company and the Michigan Gas Transmission Company.

At the time these contracts were executed, there was no Federal or other agency which had jurisdiction over the contracts, despite the fact that the Pipe Line companies were engaged in interstate commerce. However, during the past three years, the United States Congress passed an act amending the Federal Power Commission Act, and which, in effect, gives the Federal Power Commission the

sion jurisdiction over pipe lines as it has over interstate power transmission facilities.

Inasmuch as there has been a great deal of controversy over the provisions of the contracts, above referred to, it is our firm opinion that the public's interest could be best protected by petitioning the Natural Gas Division of the Federal Power Commission to make a thorough investigation of these gate rate contracts. This position is concurred in by the Prosecuting Attorney of Wayne County, who has co-operated with the City in the gas rate schedule hearings before the Michigan Public Service Commission.

We, therefore, recommend that your Honorable Body approve the filing of such a petition on behalf of the City and the County of Wayne, as represented by the Prosecuting Attorney, and suggest the adoption of the enclosed resolution.

Very truly yours,

JAMES H. LEE,
Assistant Corporation Counsel.

Approved:

PAUL E. KRAUSE,
Corporation Counsel.

By Councilman Ewald:

Whereas, the Corporation Counsel has recommanded that it is in the public's interest for the City of Detroit to file a petition with the Natural Gas Division of the Federal Power Commission, praying that such Commission make a thorough investigation of the existing contracts between the Michigan Consolidated Gas Company and the Panhandle Eastern Pipe Line Company and the Michigan Gas Transmission Company, which contracts provide for the delivery of natural gas to the City of Detroit; and

Whereas, the Prosecuting Attorney of Wayne County, who has co-operated with the City in the hearings respecting natural gas rate schedules before the Michigan Public Service Commission, concurs in the opinion that such a petition should be filed with the Federal Power Commission.

Now, therefore be it Resolved, that on behalf of the City of Detroit, this Common Council does approve of the sug-

gestion of the Corporation Counsel and does recommend and authorize that such a petition be filed by the Corporation Counsel jointly on behalf of the City of Detroit and the Prosecuting Attorney on behalf of the County of Wayne.

Adopted as follows:

Yeas—Councilmen Ewald, Garlick, Hamilton, Lodge, Sweeny, Van Antwerp and the President—7.

Nays—None.

True Copy Certificate.

State of Michigan,
City of Detroit,—ss.:

City Clerk's Office, Detroit.

I, Thomas D. Leadbetter, City Clerk of the City of Detroit, in said State, do hereby certify that the annexed paper is a true copy of a Resolution adopted by the Common Council, at a session held on the 25th day of February, 1941, as appears from the Journal of said Common Council remaining in the office of the City Clerk of Detroit, aforesaid; that I have compared the same with the original, and the same is a correct transcript therefrom, and of the whole of such original.

In Witness Whereof, I have hereunto set my hand and affixed the corporate seal of said City, at Detroit, this 26th day of February, A. D. 1941.

THOMAS D. LEADBETTER,
(Seal) City Clerk.

[fol. 16693] Separate Answer of Michigan Gas Transmission Corporation

(Received March 28, 1941, Federal Power Commission.)

Before the

Federal Power Commission

City of Detroit and County of Wayne, Municipal Corporations, Complainants,
Docket No. G-200. vs.
Panhandle Eastern Pipe Line Company, and Michigan Gas Transmission Corporation, Defendants.

To the Honorable Members of the Federal Power Commission:

Michigan Gas Transmission Corporation, defendant, for its separate answer to the petition of the complainants, respectfully shows to the Commission as follows:

First: In answer to the paragraph of the complaint numbered First: defendant admits the allegations of the first sentence thereof. It also admits the allegation of the second sentence thereof that Michigan Consolidated Gas Company distributes natural gas having its source in Texas and Kansas to customers in the City of Detroit and in the County of Wayne, State of Michigan, but as to the remainder of the allegations of said second sentence it denies knowledge or information thereof sufficient to form a belief.

Second: In answer to the paragraph of the complaint numbered Second: defendant admits the allegations thereof, except that it states that the line of Panhandle Eastern [fol. 16694] Pipe Line Company terminates at a point in Indiana near the Illinois-Indiana state line, at which point its pipe line connects with the pipe line of the defendant Michigan Gas Transmission Corporation which transports the gas from that point to the line of the Michigan Consolidated Gas Company in the County of Wayne, State of Michigan, where it delivers said gas sold by Panhandle Eastern Pipe Line Company to said Michigan Consolidated Gas Company for the account of Panhandle Eastern Pipe Line Company.

Third: In answer to the paragraph of the complaint numbered Third: defendant admits the allegations of the first sentence thereof. It admits the allegation of the second sentence thereof that Michigan Gas Transmission Corporation is controlled by Columbia Gas & Electric Corporation; but it denies the remaining allegations of said second sentence.

Fourth: In answer to the paragraph of the complaint numbered Fourth, it admits the allegations of the first sentence of paragraph Fourth, but it denies that the al-

legations of the second and third sentences of said paragraph Fourth correctly state the terms of the contract referred to as amended and if states that the demand charge provided for in said contract as amended is 38 cents per therm per month instead of 58 cents, and prays leave in general to refer to the provisions of said contract as amended for an accurate statement of the terms thereof. It admits upon information and belief that there are at the present time approximately 40,000 househeating customers but denies any information or knowledge sufficient to form a belief as to the remaining allegations of the last sentence of said paragraph Fourth.

[fol. 16695] Fifth: In answer to the paragraph of the complaint numbered Fifth: It denies that the average cost of gas to Michigan Consolidated Gas Company under the terms of said contract as amended varied from a low of approximately 32 cents per thousand cubic feet of natural gas to upwards of 34 cents and alleges that such average cost for the year 1937 was 29.54 cents, for the year 1938, was 31.15 cents, for the year 1939 was 32.79 cents, and for the year 1940 was 32.44 cents, and further states that said contract as amended sets forth in detail the rate for gas to said latter Company and prays leave to refer to the same for an accurate statement thereof.

Sixth: In answer to the paragraph of the complaint numbered Sixth: defendant denies the allegations of paragraph Sixth of the complaint, in so far as it is alleged therein that the division to Michigan Gas Transmission Corporation of the rates and charges maintained by Panhandle Eastern Pipe Line Company are unjust and unreasonable, or that any charges of Michigan Gas Transmission Corporation in connection with the sale or delivery of gas to Michigan Consolidated Gas Company are excessive, unjust or unreasonable and denies any knowledge or information sufficient to form a belief as to the remaining allegations of said paragraph Sixth.

Seventh: In answer to the paragraph of the complaint numbered Seventh: defendant denies the allegations of the first sentence of paragraph Seventh. It denies any [fol. 16696] knowledge or information thereof sufficient to form a belief as to the allegations of the second sentence of said paragraph Seventh.

Wherefore, defendant prays that the petition of the complainants be denied and the above-entitled proceeding be dismissed.

MICHIGAN GAS TRANSMISSION CORPORATION,
By Walter C. Beckjord, President,
Office and Post Office Address:
Suite 2901, No. 61 Broadway,
New York, N. Y.

[fol. 16697] State of New York,
County of New York.—ss.:

Walter C. Beckjord, being duly sworn, deposes and says:

That he is the President of Michigan Gas Transmission Corporation, one of the defendants in the above-entitled proceeding; that he has read the foregoing complaint and knows the contents thereof and that the same is true to his own knowledge except as to the matters therein stated to be alleged upon information and belief and that as to those matters he believes it to be true.

WALTER C. BECKJORD.

Nassau County Clerk's No. 35-C-40,

Commission expires March 30, 1942.

[fol. 16698] (Petition of Michigan Public Service Commission for Leave to Intervene.)

(Filed March 31, 1941, Federal Power Commission.)

Before the

Federal Power Commission

City of Detroit and County of Wayne, Municipal Corporations, Complainants,
Docket No. G-200. vs.
Panhandle Eastern Pipe Line Company, and Michigan Gas Transmission Corporation, Defendants.

Michigan Public Service Commission, Intervener.

To the Honorable Members of the Federal Power Commission:

Comes now the Michigan Public Service Commission, by and through its attorneys Herbert J. Rushton, Attorney General of the State of Michigan and James W. Williams, [Assistance] Attorney General for the State of Michigan, and, in accordance with part (a) section 15 of the "Natural Gas Act" and upon the grounds that its participation in the proceedings may be in the public interest, moves the Federal Power Commission that it be granted permission [fol. 16699] to intervene in the proceedings now pending upon the petition for an investigation of the rates and charges of the Panhandle Eastern Pipe Line Company made by the Michigan Municipalities: the City of Detroit and the County of Wayne; and for the following reasons:

1.

It is an administrative commission of the State of Michigan, created by Act 3 of the public acts of 1939 of the State of Michigan, and made successor to the Michigan Public Utilities Commission, vested with the power and authority to regulate public utilities doing business within the State of Michigan.

2.

The Michigan Consolidated Gas Company is a corporation doing business within the State of Michigan as a public utility, in that; the Michigan Consolidated Gas Company distributes natural gas to the consuming public; accessible to its plant, in the cities of Detroit, Grand Rapids, Muskegon and Ann Arbor and certain adjacent municipalities.

3.

The natural gas distributed to the consuming public within the cities of Detroit, Ann Arbor and certain adjacent municipalities, is purchased by the Michigan Consolidated Gas Company from the Panhandle Eastern Pipeline Company and the terms of the purchase and sales contract between these companies relating to the natural gas distributed within the municipalities of the City of De- [fol. 16700] troit and the County of Wayne are material and relevant to the investigation pending before your Honorable Commission.

4.

The fixing of reasonable rates and charges to customers of the Michigan Consolidated Gas Company is within the power and authority of your petitioner and any modification of the cost of natural gas to the Michigan Consolidated Gas Company may affect the reasonableness of that Company's rates and charges to consumers.

5.

Further, there is presently pending before this Commission a petitioner by National Utilities Company of Michigan, a corporation doing business within the State of Michigan as a public utility, for permission to serve the City of Monroe and certain adjacent municipalities with natural gas, which petition has a contract with the Panhandle Eastern Pipe Line Company whereby said Pipe Line Company undertakes to supply natural gas to it, which gas will be transported over the same pipe line now used to supply the municipalities of Detroit and Wayne County. The contract differs from the Detroit purchase contract in that it provides for a price for the natural gas of three cents per therm for "year round" gas and four cents per therm for seasonal gas during winter months and has no general clause of the type and kind found in the "Detroit" contract.

6.

All allegations herein contained other than those relating to the municipalities of the City of Detroit and the County of Wayne are not intended to broaden or narrow the scope [fol. 16701] of the issues presented in the instant proceedings and are made solely for the purpose of more fully disclosing your petitioner's interest. Further, your petitioner is of the opinion that public interest will best be served through your permission for it to intervene as a party with interest and without compelling it to elect to intervene in behalf of any other party to the proceedings.

7.

Your petitioner offers to make available to your Honorable Commission such services, records, and facilities as it may afford in furtherance of the instant proceedings.

Wherefore your petitioner prays:

(a) That it may be permitted to intervene and be treated as a party hereto;

(b) That it be given the right to have notice of any and all proceedings;

(c) That it be given the right to appear and be represented by counsel;

(d) That it be given the right to have notice of and appear at the taking of testimony;

(e) That it be given the right to produce and cross-examine witnesses;

(f) That it be given the right to be heard on brief and on argument, if oral argument be heard; and

[fol. 16702] (g) That it be given such other and further rights as may be necessary to the full and complete protection of the public interest.

(h) Your petitioner will ever pray, etc.

MICHIGAN PUBLIC SERVICE COMMISSION,
By James W. Williams,
Assistant Attorney General,
Assigned to the Commission.

Dated: March 27, 1941.

HERBERT J. RUSHTON,
Attorney General,
By James W. Williams,
Asst. Atty. Gen'l.
Business Address:
Attorney General Department,
State Capitol,
Lansing, Michigan.

State of Michigan,
County of Ingham.—ss.:

On this 28th day of March, A. D., 1941, before me, a Notary Public, appeared James W. Williams, to me known, who, being first duly sworn, did say that he knows the contents of the foregoing petition by him subscribed and that the same are true, except as to those matters therein

stated upon information and belief which he believes to be true.

Seal

H. A. FORSTER,
Notary Public, Kalamazoo County, Acting in Ingham County, Michigan.

My Commission Expires April 18, 1941.

[fol. 16705] Separate Answer of Panhandle Eastern Pipe Line Company.

(Filed April 3, 1941, Federal Power Commission.)

Before the

Federal Power Commission

City of Detroit and County of Wayne, Muncipal Corporations, Complainants,

Docket No. G-200. vs.

Panhandle Eastern Pipe Line Company, and Michigan Gas Transmission Corporation, Defendants.

To The Honorable Members of The Federal Power Commission:

Defendant, Panhandle Eastern Pipe Line Company, for its separate answer to the petition of complainants, respectfully shows to the Commission:

1. That in answer to paragraphs numbered first, second, and third of the petition, this defendant admits that the complainants are municipal corporations existing under and by virtue of the laws of the State of Michigan, and are municipalities within the meaning of the Natural Gas Act; that this defendant is a corporation organized and existing under the laws of the State of Delaware and is engaged in the transmission and sale of natural gas in interstate commerce; that it sells natural gas to Michigan Consolidated Gas Company for resale in the City of De-[fol. 16706] troit and environs in the County of Wayne, State of Michigan; and that it transports said natural gas from its sources of supply in Texas and Kansas to a point in Indiana near the Illinois-Indiana state line, at which point its transmission facilities connect with the trans-

mission facilities of Michigan Gas Transmission Corporation and from which point said company transports and delivers said natural gas to Michigan Consolidated Gas Company at the point of delivery near the City of Detroit for the account of this defendant, such transportation and delivery by Michigan Gas Transmission Corporation being performed by it under a contract, as amended, with this defendant dated March 17, 1936.

This defendant denies that it is affiliated with Michigan Gas Transmission Corporation or that it is controlled by Columbia Gas & Electric Corporation.

2. In answer to paragraph numbered fourth of the petition, except the last sentence thereof which is answered in paragraph numbered five hereof, this defendant admits that its rates and charges to Michigan Consolidated Gas Company for gas sold by this defendant to said company for resale in Detroit and environs are governed by contract dated August 31, 1935, as amended by four certain supplemental agreements, between this defendant and Michigan Consolidated Gas Company, formerly Detroit City Gas Company, but denies that said contract provides a demand charge of fifty-eight (58) cents per therm per month. This defendant alleges the fact to be that said con- [fol. 16707] tract provides for a demand charge of thirty-eight (38) cents per therm, per month, based upon the maximum daily demand established during the four months' period December to March, inclusive, of each year, and for a commodity charge of one and five tenths (1.5) cents per therm.

3. With respect to paragraph numbered fifth of the petition, this defendant denies the allegations thereof and states that further answer thereto is made in paragraph numbered five hereof.

4. Answering paragraphs numbered sixth and seventh of the petition, except the allegations in paragraph seventh thereof with respect to the rates of this defendant for gas used for househeating purposes by customers of Michigan Consolidated Gas Company, which allegations are fully answered in paragraph five hereof, this defendant denies that its rates and charges and the cost of gas to Michigan

Consolidated Gas Company are unjust, unreasonable or excessive, or that the same adversely affect the customers of Michigan Consolidated Gas Company in any classification. This defendant denies that the amount received by it for gas sold under the aforesaid contract of August 31, 1935, as amended, after deducting therefrom the amount paid to Michigan Gas Transmission Corporation for transporting said gas from the Illinois-Indiana state line to the Detroit point of delivery is excessive.

With respect to the allegations to the effect that the division of this defendant's rates and charges to Michigan Gas Transmission Corporation is unjust and unreasonable, [fol. 16708] this defendant states that it believes that at the time its contract with Michigan Gas Transmission Corporation, dated March 17, 1936, was entered into, the charges of that company for transporting gas were equitable and reasonable, and that at this time this defendant has insufficient knowledge and information to form a belief as to the present reasonableness of said charges.

5. Further answering paragraphs numbered fourth, fifth and seventh of the petition, this defendant in denying the allegations thereof, states that its contract with Michigan Consolidated Gas Company dated August 31, 1935, as amended, sets forth in detail the rates and charges for natural gas delivered thereunder and respectfully refers this Commission to said contract for an accurate statement thereof; that the average prices per therm paid for such gas during the calendar years 1937, 1938, 1939, and 1940 were 2.92 cents, 3.08 cents, 3.24 cents, and 3.20 cents, respectively; that under this defendant's aforesaid contract, as amended, with Michigan Consolidated Gas Company, the rate for gas resold to househeating customers in excess of twenty five thousand might, under certain extreme conditions, be sixty two (62) cents per thousand cubic feet; that by supplemental gas contract with Michigan Consolidated Gas Company, dated June 2, 1936, this defendant in effect guaranteed that the rate for a quantity of natural gas equal to the requirements of twenty thousand househeating customers would not be greater than four and one tenth (4.1) cents per therm, and by a third supplemental contract with said company dated September 29,

[fol. 16709] 1939, this defendant in effect extended said guarantee to include an amount of natural gas equal to the requirements of twenty five thousand househeating customers; that the actual rate for gas resold to househeating customers in excess of twenty five thousand is dependent on the rate of growth of such business of Michigan Consolidated Gas Company from year to year and upon the relation of the demand on the maximum day to such deliveries of said company during the year; that this defendant has calculated the average rate paid by Michigan Consolidated Gas Company for househeating gas delivered to customers in excess of twenty five thousand during the calendar year 1940 to have been less than three (3) cents per therm and has estimated that during the calendar year 1941 said rate will be less than three and five tenths (3.5) cents per therm instead of a rate even approaching sixty two (62) cents per thousand cubic feet as estimated and alleged by complainants; that during all calendar years to date under said contract the rate for all househeating gas has been less than four and one tenth (4.1) cents per therm; that by letter to Michigan Consolidated Gas Company dated July 18, 1940, this defendant offered to substitute for the rate provided in the aforesaid contract a different form of rate which would result in a charge of not more than four (4) cents per therm for natural gas sold to Michigan Consolidated Gas Company for resale to househeating customers regardless of the number thereof; that said offer was not accepted by Michigan Consolidated Gas Company because, as this defendant believes, of the then existing characteristics of its business and particularly [fol. 16710] the continuing growth thereof; that on information and belief, this defendant states that the Michigan Public Service Commission did on November 20, 1940 order an increase in househeating rates of Michigan Consolidated Gas Company in the Detroit area effective January 4, 1941, that at the time of the issuance of said order said Commission was not aware of this defendant's offer of a new form of rate by said letter dated July 18, 1940, that after being informed of said offer, the Michigan Public Service Commission postponed the effective date of said increased rates to May 1, 1941 and ordered a rehearing in the matter of the househeating rates of Michigan Consolidated Gas Company.

6. Further answering the petition, this defendant shows the Commission:

That about eighteen months ago it commenced studies of its rate structure with the view of eliminating the demand feature of its rates; that about twelve months ago it developed rates for its customers which eliminated the changing demand feature of its then existing rates and said rates have been generally accepted by such customers, but, as hereinabove stated, was rejected by Michigan Consolidated Gas Company.

This defendant has continued its studies and believes it can develop a new rate which will be accepted by Michigan Consolidated Gas Company; that if such a rate is developed and accepted for the Detroit area, it will necessitate a modification of this defendant's rates to certain other of its customers; that it hesitates to propose such a modifi- [fol. 16711] cation of said rates pending the outcome of the April 7, 1941 election to be held in the City of Detroit, and the final determination thereafter of the question of municipal ownership of the gas plant in Detroit and environs; that upon final determination of the question of municipal ownership this defendant believes it will be in a position to offer such a new rate either to Michigan Consolidated Gas Company or to the City of Detroit as the case may be and that negotiations with such owner will develop a rate which will satisfy the complaint filed in this cause.

This defendant desires to acquire the properties of Michigan Gas Transmission Corporation and states on information and belief that the Department of Justice and the Securities and Exchange Commission have indicated that Columbia Gas & Electric Corporation should dispose thereof; that this defendant believes that such acquisition may occur in the near future and in that event no question of divided revenues or separate plant accounts will be involved herein.

This defendant has continuously found it necessary to expend large sums of money for additional facilities in order to increase the capacity of its system sufficiently to keep pace with the requirements of new and expanding markets; that such expansion, in addition to normal

growth, has been so rapid that it is impossible to accurately appraise the results of any rate modifications which it might make effective: that taxes have increased and the estimated Federal Income and Excess Profits Tax liability of this defendant in 1940 will be one hundred forty five [fol. 16712] per cent greater than was its Federal Income Tax liability in the year 1939; that as a more stabilized condition of this defendant's markets, operating costs, and tax liability is approached, an appraisal of its rate structure becomes simpler and more susceptible of accurate analysis.

This defendant believes, and therefore states, that should it later appear that an investigation as prayed for by complainants is necessary or advisable, the same will be greatly facilitated and simplified by the occurrence of any of the matters set forth in this paragraph numbered six and should this Commission postpone such an investigation, this defendant represents that it stands ready to keep the Commission informed as to the progress of its rate studies and negotiations and the developments occurring with respect to all of the matters and things in this paragraph numbered six referred to.

Wherefore, this defendant prays that the petition of complainants be denied, or in the alternative that the investigation prayed for therein be postponed pending further developments with respect to the matters and things set forth in paragraph numbered six hereof, or in the event of undue delay of such developments, for such time as this Commission shall determine is reasonable in view of all [fol. 16713] circumstances.

Respectfully submitted,

PANHANDLE EASTERN PIPE LINE COMPANY,

Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Corporation.

It appearing to the Commission that:

(a) On February 28, 1941, the City of Detroit and the County of Wayne, Michigan, both of which are municipalities within the meaning of the Natural Gas Act, filed a petition which, among other things, alleges in substance: that the Panhandle Eastern Pipe Line Company is engaged in the transportation of natural gas in interstate commerce from producing fields in the States of Texas and Kansas, to a point of delivery near the City of Detroit; that it is also engaged in the sale of such gas to the Michigan Consolidated Gas Company for resale in said City of Detroit and County of Wayne; that such gas is transported from a point on the Indiana-Illinois boundary line to a point at or near the City of Detroit by the Michigan Gas Transmission Corporation for the account of the Panhandle Eastern Pipe Line Company, for which transportation Panhandle Eastern Pipe Line Company pays its affiliate, Michigan Gas Transmission Corporation, an excessive rate or charge; that the rates and charges demanded and collected by Panhandle Eastern Pipe Line Company from the Michigan Consolidated Gas Company are unjust, unreason-[fol. 16716] able, and unduly discriminatory; and said City of Detroit and County of Wayne request this Commission, after investigation, to fix and determine the just and reasonable rates to be thereafter observed and in force in respect of such transportation and sale of natural gas for resale in said City and County;

(b) Michigan Gas Transmission Corporation filed an answer to said petition on March 28, 1941, denying, among other things, that it is affiliated with Panhandle Eastern Pipe Line Company, or "that the division to Michigan Gas Transmission Corporation of the rates and charges maintained by Panhandle Eastern Pipe Line Company are unjust and unreasonable, or that any charges of Michigan Gas Transmission Corporation in connection with the sale or delivery of gas to Michigan Consolidated Gas Company are excessive, unjust or unreasonable";

(c) Panhandle Eastern Pipe Line Company filed an answer to said petition, on April 3, 1941, denying, among other things, that it is affiliated with the Michigan Gas Transmission Corporation, or that it is controlled by the Columbia Gas & Electric Corporation, or that its rates are unjust, unreasonable, or discriminatory;

(d) The Panhandle Eastern Pipe Line Company is engaged in the transportation of natural gas in interstate commerce through a transmission pipe line extending from the State of Texas to a point on the border line between the States of Illinois and Indiana, and the sale in interstate commerce of natural gas for resale, and may be a natural-gas company within the meaning of the Natural Gas Act;

(e) The Michigan Gas Transmission Corporation is engaged in the transportation of natural gas in interstate commerce through a transmission pipe line extending from a point on the border line between the States of Illinois and Indiana to a point at or near the City of Detroit, Michigan, and the sale in interstate commerce of natural gas for resale, and may be a natural-gas company within the meaning of the Natural Gas Act;

(f) Natural gas sold by the Panhandle Eastern Pipe Line Company to the Michigan Consolidated Gas Company for resale in the City of Detroit is transported by Michigan Gas Transmission Corporation through its interstate transmission pipe line for the account of Panhandle Eastern Pipe Line Company.

(g) By letter of June 4, 1941, the said City of Detroit and County of Wayne have advised the Commission "that at a date approximately 30 days from date hereof, your

[fol. 16717] petitioners will be prepared to present evidence to substantiate the allegations contained in our petition";

The Commission orders that:

A public hearing in this proceeding be held commencing on July 15, 1941, at 9:45 o'clock, a. m. (E.S.T.), at 1800 Pennsylvania Avenue, N. W., in the City of Washington, D. C.

By the Commission.

LEON M. FUQUAY,
Secretary.

[fol. 16718] (Order permitting Michigan Public Service Commission to Intervene.)

United States of America

Federal Power Commission

Commissioners: Claude L. Draper, Acting Chairman, Basil Manly, John W. Scott and Clyde L. Seavey. Leland Olds not participating.

June 10, 1941.

City of Detroit, Michigan and County of Wayne, Michigan,
Docket No. G-200 vs.
Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Corporation.

It appearing to the Commission that:

(a) On March 31, 1941, the Michigan Public Service Commission filed a petition praying for leave to intervene in this proceeding;

(b) The participation of the Michigan Public Service Commission in this proceeding may be in the public interest;

The Commission orders that:

The Michigan Public Service Commission be and it is hereby permitted to become an intervenor in this proceeding, provided, however, such permission shall not be

construed as recognition by this Commission that said Michigan Public Service Commission might be aggrieved by any order of this Commission issued in this proceeding.

By the Commission.

LEON M. FUQUAY,
Secretary.

[fol. 16720] (Petition of Panhandle Eastern Pipe Line Company for Continuance of hearing.)

(Received June 26, 1941, Federal Power Commission.)

Before the

Federal Power Commission.

City of Detroit and County of Wayne, Municipal Corporations, Complainants,

Docket No. G-200 vs.

Panhandle Eastern Pipe Line Company, and Michigan Gas Transmission Corporation, Defendants.

Panhandle Eastern Pipe Line Company, one of the defendants in the above entitled cause, hereby petitions the Commission for a six months' continuance of the hearing now set for July 15, 1941 and as grounds therefor states:

1. The public interest does not require an early hearing in this cause.

The petition filed by the City of Detroit and the County of Wayne on or about February 28, 1941, although containing general allegations and a broad prayer for relief, manifestly was primarily aimed at and instituted because of a supposed discriminatory rate affecting gas ultimately to be used by housheating customers in excess of twenty-five thousand in number in the City of Detroit, Michigan. It is apparent that the general allegations as to the unreasonableness of this defendant's rates and the division [fol 16721] of revenues between this defendant and the defendant, Michigan Gas Transmission Corporation, bring into question the value of defendants' properties, the expected life of the enterprise as a whole, the lawful and

proper rate of depreciation, the reasonableness of operating expenses, and many other factors which complainants are not equipped to develop and, even if so equipped, would be unable to develop because of the lack of any right to make adequate investigation. Probably for this reason this Commission instituted an investigation (Docket No. G-207) and undoubtedly intends, by virtue of the powers vested in it by Congress and by the use of a staff equipped to obtain necessary information and to develop the pertinent facts, to inquire through its customary proceedings as to the matters involved under the general allegations of complainants' petition filed at Docket G-200. Therefore, as to those matters, the public interest does not require that complainants be heard on July 15, 1941.

As to the apparent gravamen of complainants' petition, that is, the allegation of discrimination as to gas sold by this defendant to Michigan Consolidated Gas Company for resale to househeating customers in excess of twenty-five thousand, the public interest does not require an early hearing because the alleged discrimination does not in fact exist, but is merely a claim born either of a lack of correct information and data or of a complete misunderstanding [fol. 16722] of correct information and data and the applicable contracts. Although at first blush this might be considered by the Commission as a statement of an ultimate fact to be determined by hearing, and although such a position might technically be correct, it nevertheless is true that the staff of this Commission can ascertain beyond any question of a reasonable doubt from contracts, reports and other data which has been furnished to this Commission by this Defendant, and without any reasonable necessity for an early hearing, that the average rate paid by Michigan Consolidated Gas Company for househeating gas delivered to customers in excess of twenty-five thousand during the calendar year 1940 was substantially less than three (3) cents per therm.

The billing demand which will govern until April, 1942 has been established and by the application of reasonable estimates based upon information and data derived from known experience, this Commission's staff can readily determine from such data as this defendant has furnished the

Commission that the average rate paid and to be paid by Michigan Consolidated Gas Company for househeating gas delivered and to be delivered to customers in excess of twenty five thousand during the calendar year 1941 will not exceed three and five-tenths (3.5) cents per therm, and that there is not, and could not be, under present conditions, any foundation for a claim that such gas will cost Michigan Consolidated Gas Company more than gas for other househeating customers and much less for complainants' extravagant claim that such gas may cost [fol. 16723] Michigan Consolidated Gas Company sixty-two (62) cents per thousand cubic feet.

2. The public interest does require that this defendant's petition for continuance be granted.

For several months it has been apparent to this defendant that requirements of its customers during the winter of 1941 and 1942 will be such as to gravely tax and probably render inadequate the capacity of its facilities without frequent interruption or curtailment of gas supplied to many industries contributing to National Defense unless facilities for a substantial increase in capacity can be installed prior to the severe winter months. The Defense Program has created an acute shortage in steel for private industry and it is practically impossible to obtain steel plate for the manufacture of pipe without the assistance of the United States Government by way of priorities granted because of the need for steel in activities directly related to National Defense.

Therefore, several weeks ago this defendant, in order to substantiate its claim for priority, set out to obtain estimates of the requirements of its customers for the winter of 1941-42, together with data as to the defense materials being manufactured by industries using its gas. The data thus acquired shows that almost all industries now using gas from this defendant's pipe lines are engaged in defense work, that fully fifty per cent of their entire output is directly related to the defense program and that practically all of the increase in their gas requirements for the winter of 1941-42, in the estimated quantity of more than [fol. 16724] fifteen million (15,000,000) cubic feet per day

over and above their requirements for the last winter, will be used in defense work.

In addition to present consumers, this defendant expects to serve the requirements of additional domestic, commercial and industrial consumers in and near many cities, towns and communities in the State of Michigan, including Flint, Pontiac, Kalamazoo, Jackson, and Battle Creek, none of which are presently being served with natural gas. Included among these consumers are many industries which are vital to the Defense Program, now using gas but faced with an inadequate supply. This defendant is now engaged in obtaining necessary certificates and licenses for the construction of pipe lines in the State of Michigan and will apply to this Commission for a certificate of convenience and necessity if required under the provisions of the Natural Gas Act as construed under the decisions of this Commission.

The industries, now using gas from this defendant's pipe lines and manufacturing defense materials, number eighty-nine in the City of Detroit, Michigan, seventy-four in the State of Indiana; thirty-six in the State of Illinois, and ten in the State of Missouri. More than fifty additional industries engaged in defense work elsewhere in the State of Michigan are expected to be supplied with gas to be transported by this defendant upon completion of its pipe lines in the State of Michigan.

Seeking a preference rating sufficiently high to insure [fol. 16725] deliveries of steel pipe to meet its schedule for the construction of facilities for additional capacity and its proposed pipe lines in the State of Michigan, this defendant filed its formal application, supported by extensive data, including the above, with the Priorities Division of the Office of Production Management. Complete analysis of said data has been made by the Priorities Division and hearings have been held before it with the result that on June 17, 1941 it issued its Certificate No. C-102393 granting a Preference Rating, sufficiently high to meet this defendant's construction schedule, on steel for all pipe required by this defendant for the aforesaid construction program.

This defendant's construction program involves the obtaining of more than fifty five thousand (55,000) tons of steel pipe, together with large quantities of gate valves,

couplings, and pipe coating; and the construction of over four hundred (400) miles of pipe line for which rights of way and river, railroad and highway crossing permits must be obtained before the construction work can be done.

This defendant's personnel, while sufficient for ordinary operations, is not large enough to carry out the aforementioned complex program without every man bending unusual efforts to that end. Sufficient additional men of adequate training and experience are unavailable, and therefore present employees must devote their time to this program in addition to their regular work. To this end many of this defendant's employees have been required to [fol. 16726] defer vacations. Under the best conditions obtainable in view of these circumstances, this defendant will be unable to complete its construction program before the first of the coming year. The full time and efforts of the men who would be required to prepare for and attend the hearing now set for July 15, 1941 are all important to the aforementioned program which is vital not only to the National Defense Program but also to many thousands of residential users of gas. To divert the efforts of these men, even for a short time, would seriously impede the work now being carried on.

For the foregoing reasons this defendant believes that the public interest requires that the hearing be postponed.

Wherefore, this defendant prays that this Commission enter an order continuing the hearing now set for July 15, 1941 for a period of approximately six months, at which time much of the work connected with its present construction program will have been completed.

Respectfully submitted,

PANHANDLE EASTERN PIPE LINE COMPANY,

By G. J. Neuner,
Vice-President,

[fol. 16728] (Concurring Petition of Michigan Gas Transmission Corporation for Continuance of Hearing.)

(Received July 3, 1941, Federal Power Commission.)

Before the

Federal Power Commission.

City of Detroit and County of Wayne, Municipal Corporations, Complainants,
Docket No. G-200 vs.
Panhandle Eastern Pipe Line Company, and Michigan Gas Transmission Corporation, Defendants.

Michigan Gas Transmission Corporation, one of the defendants in the above entitled cause, hereby joins in the petition of Panhandle Eastern Pipe Line Company for a six months' continuance of the hearing now set for July 15, 1941, and as additional grounds therefor states:

1. The granting of a continuance would tend to simplify the hearings.

It is probable that a substantial saving of time and effort, both to the Commission and to the various parties to the proceeding as well, could be realized by a continuance of six months. It has for some time been contemplated that Panhandle Eastern Pipe Line Company would, pursuant to a certain Plan, acquire the stock and indebtedness of Michigan Gas Transmission Corporation. On June 7, 1941 an agreement was entered into providing for the carrying out of this Plan, with certain modifications. Under said agreement it is contemplated that Panhandle Eastern Pipe [fol. 16729] Line Company will acquire said stock and indebtedness of Michigan Gas Transmission Corporation by October 1, 1941, and said agreement provides that it shall terminate unless all the transactions provided for are effected by that date, but that such date shall be extended to December 1, 1941 upon the request of any one of the parties. In connection with carrying out the various provisions of said agreement, applications must be made to the United States District Court for the District of Delaware and the Securities and Exchange Commission, and said applications are now in course of preparation.

It is obvious that after the acquisition by Panhandle Eastern Pipe Line Company of the stock and indebtedness of Michigan Gas Transmission Corporation the problem of determining questions involving rates will be considerably simplified, particularly if the physical properties of Michigan Gas Transmission Corporation and Panhandle Eastern Pipe Line Company are put into the same corporation by merger or otherwise, a move which Michigan Gas Transmission Corporation is informed is under consideration after said acquisition by Panhandle Eastern Pipe Line Company.

2. The grounds urged by Panhandle Eastern Pipe Line Company in its petition for continuance are largely applicable to Michigan Gas Transmission Corporation as well.

Not only is Michigan Gas Transmission Corporation hampered in its individual operations at this time by reason of various circumstances and conditions arising out of the present emergency, but it is necessarily affected by emergency conditions applicable to Panhandle Eastern [fol. 16730] Pipe Line Company by reason of the fact that all gas received and transported by Michigan Gas Transmission Corporation comes from the lines of Panhandle Eastern Pipe Line Company.

3. The Defendant Primarily Involved is Panhandle Eastern Pipe Line Company.

The gravamen of this case appears to be the charge of discrimination against Panhandle Eastern Pipe Line Company, and that company is the defendant principally and primarily involved. Michigan Gas Transmission Corporation has no contractual relationships with the City of Detroit or the County of Wayne, the complainants herein, but the contractual relationships in question are between said complainants and Panhandle Eastern Pipe Line Company. It may be, therefore, that evidence as to Michigan Gas Transmission Corporation will prove not to be pertinent in this proceeding. In any event it could hardly be pertinent until after an investigation into the rates and charges of Panhandle Eastern Pipe Line Company demonstrated its relevance and pertinency as bearing upon such rates and charges.

Wherefore the defendant Michigan Gas Transmission Corporation prays that the hearing now set for July 15, 1941 be deferred for a period of six months as requested by Panhandle Eastern Pipe Line Company.

Respectfully submitted,

MICHIGAN GAS TRANSMISSION CORPORATION,

By Walter C. Beckjord,

President.

Commission expires March 30, 1942.

[fol. 16733] (Objection of City of Detroit and County of Wayne to Defendants' Petition for Continuance.)

(Received July 3, 1941, Federal Power Commission.)

The City of Detroit and the County of Wayne, complainants herein, file this objection to the petition for continu-

ance of Panhandle Eastern Pipe Line Company and say as follows:

There exists an emergency in connection with the rates of Michigan Consolidated Gas Company affecting the inhabitants in the complainant municipalities for the reason that the Michigan Public Service Commission has a hearing scheduled on July 21, 1941, continued to said date from prior dates, wherein will be considered the question of whether the entire house-heating rates for customers in the complainant municipalities should be increased.

The allegations in respect to a cost of 3.5 cents per therm appearing on page 3 of respondent's petition for continuance are on their face confused and deceptive in purport, for it is there alleged and concluded that "during the cal- [fol. 16734] endar year of 1941 such cost will not exceed three and five-tenths (3.5) cents per therm." But the average cost of gas during the calendar year 1941 is affected by the peak dates of December, 1939, and January, February, March, 1940, when the number of customers did not exceed 25,000 and the only reflection of the peak occurring in December, 1940, or in January, February, March, 1941, in the calendar year, will be for such use as is made of house-heating gas in the fall and early winter season of the 1941-1942 heating season. From the evidence before complainants, it appears that the house-heating demand has a load factor of 25% and in view thereof, that particular demand so enlarges the demand charge as to create an additional burden equal to about six (6) cents per therm in respect to the gas consumed by house-heating customers in excess of 25,000.

The emergency confronting complainants municipalities still exists, for the Michigan Public Service Commission appears to be about to increase the rates for all house- [fol. 16735] heating customers unless such action shall be rendered unnecessary by the prompt and appropriate action of this Commission.

Respectfully submitted,

CITY OF DETROIT,
By Paul E. Kraus,
Corporation Counsel.

Harold Goodman, being duly sworn, deposes and says that the foregoing statements by him subscribed are true according to his best knowledge and belief.

[fol. 16736] Designation of Trial Examiner.

By virtue of the order of the Commission adopted November 3, 1939, authorizing Commissioners and others to preside at hearings, and the Commission, by order adopted June 10, 1941, having directed that a hearing be held in the above matter, to convene at 9:45 o'clock a. m. on July 15, 1941, Samuel H. Crosby is designated as trial examiner to preside at said hearing.

Done, this 8th day of July 1941, by authority of the Commission.

LELAND OLDS,
Chairman.

[fol. 16737] (Order Denying Petitions for Continuance of Date of Hearing.)

United States of America
Federal Power Commission

Commissioners, Leland Olds, Chairman, Claude L. Draper, Basil Manly, John W. Scott and Clyde L. Seavey.

July 8, 1941.

City of Detroit, Michigan,
and
County of Wayne, Michigan,
Docket No. G-200. vs.
Panhandle Eastern Pipe Line Company,
and
Michigan Gas Transmission Corporation.

Upon petition of the Panhandle Eastern Pipe Line Company filed June 26, 1941, and petition of the Michigan Gas Transmission Corporation filed July 3, 1941, for a continuance of the hearing in this proceeding now fixed for July 15, 1941;

It appearing to the Commission that:

No good cause for the granting of said petitions has been shown;

The Commission orders that:

The petitions of the Panhandle Eastern Pipe Line Company and the Michigan Gas Transmission Corporation filed on June 26, 1941, and July 3, 1941, respectively, be and the same are hereby denied.

By the Commission.

LEON M. FUQUAY,
Secretary.

[fol. 16739] (Petition of Michigan Consolidated Gas Company for Leave to Intervene.)

(Received July 10, 1941, Federal Power Commission.)

Before the Federal Power Commission.

City of Detroit and County of Wayne, Municipal Corporations, Complainants,
Docket No. G-200. vs.
Panhandle Eastern Pipe Line Company, and Michigan Gas Transmission Corporation, Defendants.

Michigan Consolidated Gas Company, Intervener.

To the Honorable Members of the Federal Power Commission:

Comes now the Michigan Consolidated Gas Company by and through its attorney, Park Chamberlain, and, upon the ground that its participation in the proceedings may be in the public interest, moves the Federal Power Commission that it be granted permission to intervene in the proceedings now pending upon the petition for an investigation of the rates and charges of the Panhandle Eastern Pipe

[fol. 16740] Line Company and Michigan Gas Transmission Corporation, made by the City of Detroit and the County of Wayne, municipal corporations of the State of Michigan, and in the proceeding instituted by the Federal Power Commission upon its own motion to investigate Panhandle Eastern Pipe Line Company and the Michigan Gas Transmission Corporation to determine the status of such companies under the "Natural Gas Act", whether rates charged by them for natural gas in interstate commerce are excessive, unjust, unreasonable, or discriminatory, and what rates and charges for natural gas for resale in the Detroit area would be just and reasonable, and for the following reasons:

1.

It is a public utility incorporated under the laws of the State of Michigan, engaged in the distribution of natural gas in the metropolitan area of Detroit, Michigan, and to a small extent in the production, sale, and distribution of manufactured gas.

2.

Petitioner has, since about July 1st, 1936, purchased its entire supply of natural gas from the defendant, Panhandle Eastern Pipe Line Company, (which delivers the gas through Michigan Gas Transmission Corporation, an affiliate), under the terms of a contract entered into between petitioner and Panhandle Eastern Pipe Line Company August 31st, 1935, and four supplemental contracts, all of which are subject to orders within the jurisdiction of the Federal Power Commission.

[fol. 16741]

3.

The natural gas purchased by petitioner from Panhandle Eastern Pipe Line Company is distributed to approximately 435,000 consumers within the State of Michigan for domestic, commercial, house heating, and industrial purposes, and the cost of natural gas is an operating expense which directly affects the rates which must be charged by petitioner to the public.

4.

The rates and charges of petitioner are established by the Public Service Commission of the State of Michi-

gan, an intervener in these actions, and rates heretofore established by said Public Service Commission have been suspended pending the hearings before this Commission, and it is necessary in the public interest that the house-heating rates which have been suspended be promptly established because of the approaching fall and winter demand.

5.

Inasmuch as natural gas has, up to this time, been purchased under written contracts with Panhandle Eastern Pipe Line Company, petitioner is directly interested in such revisions of rates and in such regulations as may be required and enforced by this Commission with respect to the service and the discriminatory practices of Panhandle Eastern Pipe Line Company.

6.

Petitioner attaches hereto its duly verified petition directed toward and made a part of the investigations of [fol. 16742] Panhandle Eastern Pipe Line Company, its rates and charges as aforesaid, and asks that the same be filed therein and that it be allowed to become a party by way of intervention.

Wherefore your petitioner prays:

(a) That it may be permitted to intervene and be treated as a party hereto;

(b) That it be given the right to have notice of any and all proceedings;

(c) That it be given the right to appear and be represented by counsel;

(d) That it be given the right to have notice of and appear at the taking of testimony;

(e) That it be given the right to produce and cross-examine witnesses;

(f) That it be given the right to be heard on brief and on argument if oral argument be heard; and

(g) That it be given such other and further rights as may be necessary to the full and complete protection of the public interest.

(h) Your petitioner will ever pray, etc.

MICHIGAN CONSOLIDATED GAS COMPANY,
By Park Chamberlain, Its Attorney.
Business Address: 815-15 St. N. W., Washington, D. C.

By Frank L. Conrad, Vice President,
Business Address: Of Petitioner, 415 Clifford Street, Detroit, Michigan.

Dated: July 9, 1941.

[fol. 16743] State of Illinois,
County of Cook—ss.

On this 9th day of July, A. D. 1941 before me, a Notary Public, appeared Frank L. Conrad, to me known, who, being first duly sworn, did say that he is the Vice President of the Michigan Consolidated Gas Company, the petitioner herein; that he has read the foregoing petition for leave to intervene and that the statements therein contained are true, except as to those matters therein stated upon information and belief which he believes to be true.

ANNETTE HELBIG,
Notary Public in and for Cook County, Illinois.

My commission expires Aug. 25, 1942.

[fol. 16744] (Intervention of Michigan Consolidated Gas Company.)

To the Honorable Members of the Federal Power Commission:

The Michigan Consolidated Gas Company respectfully shows:

I.

Petitioner is a corporation duly organized and existing under and by virtue of the laws of the State of Michi
[fol. 16745] gan, with principal place of business at 415

Clifford Street in the City of Detroit, County of Wayne, and State of Michigan. It is a public utility engaged in the sale and distribution of natural gas, which it purchases from Panhandle Eastern Pipe Line Company, and in the production, sale, and distribution of manufactured gas in small amount. It serves, at the present time, approximately 435,000 residential, househeating, commercial, and industrial consumers located in the City of Detroit and environs, the area served being about 500 square miles in extent, including the cities of Hamtramck, Highland Park, Dearborn, River Rouge, Grosse Pointe, Melvindale, Wyandotte, Lincoln Park and 22 smaller municipalities, with a total population estimated on the basis of Federal Census to be 1,855,000.

2.

The defendant, Panhandle Eastern Pipe Line Company, is a corporation organized and existing under and by virtue of the laws of the State of Delaware, with principal place of business at Kansas City, Missouri, and is engaged in the transportation of natural gas in interstate commerce and in the sale in interstate commerce of natural gas for resale for ultimate public consumption. It is a "natural gas company" as defined by the "Natural Gas Act" and has, since 1936, been furnishing the entire natural gas requirements of petitioner for distribution to its consumers, delivering such gas into the transmission mains of petitioner in Melvindale, Wayne County, Michigan. For convenience it will sometimes hereinafter be referred to as "Panhandle Eastern".

[fol. 16746]

3.

The defendant, Michigan Gas Transmission Corporation, is a corporation organized and existing under and by virtue of the laws of the State of Delaware, engaged in the transportation of natural gas in interstate commerce, and in the sale in interstate commerce of natural gas for resale for ultimate public consumption and is a "natural gas company" as defined by the "Natural Gas Act". It has, throughout the period in which Panhandle Eastern has furnished natural gas to petitioner, transported all of said gas from the terminus of the pipe line of Panhandle Eastern situate at the Illinois-Indiana state

line at or near the town of Dana, Indiana, to the point of delivery to petitioner. For convenience it will sometimes hereinafter be referred to as "Michigan Gas Transmission".

4.

Panhandle Eastern is a subsidiary of Columbia Oil and Gasoline Corporation, which is in turn a subsidiary of Columbia Gas and Electric Corporation, both Delaware corporations. Michigan Gas Transmission is a wholly owned subsidiary of Columbia Gas and Electric Corporation and, therefore, an affiliate of Panhandle Eastern.

5.

On or about August 31, 1935, Panhandle Eastern entered into a written contract with petitioner, then named Detroit City Gas Company, agreeing to supply petitioner's requirements of natural gas up to a maximum daily demand of 90,000,000 cubic feet, or 912,600 therms, under what is known as a two-part rate. The demand or capacity charge is a monthly charge equal in amount to 38c [fol. 16747] multiplied by the number of therms delivered on the maximum day during the preceding months of December, January, February, and March, and the commodity charge is 1.5c per therm. Under this contractual rate, the cost of gas to petitioner at the point of delivery varies in accordance with the load factor on which it is taken, the rate at the following indicated load factors being approximately as follows:

Load Factor	Rate in Cents Per M.c.f.
27%	62.5
50%	40
70%	32.9
85%	29
100%	27.5

(In this and the next succeeding section (6) the computation as to cost per M.c.f. is based on 1,000 B.t.u. gas.)

Under this contract it was made mandatory upon petitioner to ultilize its existing gas-holders, with capacity

of approximately 56,000,000 cubic feet, to assist in leveling peak loads, and petitioner was permitted to use its water gas generating equipment at its option for the purpose of reducing and leveling such peak loads, thereby increasing the load factor, releasing capacity to the pipe line company for other and further public service, and lowering the rate which petitioner is required to pay for natural gas.

6.

Under the contract, petitioner was required to pay 3¢ per therm for all gas taken prior to such time as its customers' appliances were completely adjusted for the use of natural gas. Since March 31st, 1937, shortly thereafter, petitioner has paid the following average rate per M.c.f. for each of the years indicated:

[fol. 16748] For the year ending March 31, 1938..29.07¢

For the year ending March 31, 1939.....32.08¢

For the year ending March 31, 1940.....32.13¢

For the calendar year 1940.....33.00¢

Due to the increased demand for gas for househeating and for defense purposes it is estimated and believed that the average cost of gas for 1941 will be substantially increased.

7.

Detroit, located in a northern area, affords a large market for househeating gas. Due to the seasonal character of this type of service, the load factor is poor and is estimated to be around 27½%. The rates contained in the contract of August 31, 1935, failed to recognize that petitioner could not market househeating gas which cost in the neighborhood of 62½¢ per M.c.f. and not until some months after the contract had been made firm did did Panhandle Eastern become convinced that petitioner would not promote househeating sales if it be required to purchase under the contract rate. Desirous of promoting sales for househeating purposes, notwithstanding its low load factor, Panhandle Eastern entered into further

negotiations with petitioner and on or about June 2nd, 1936, voluntarily entered into a contract stipulating that it would pay petitioner a bonus of from $10.00 down to $2.00 per househeating consumer connected to its distribution mains up to 18,000 customers, the aggregate payment to be $118,000. It further agreed that petitioner might place a total of 20,000 househeating customers on its mains and that the charge for the gas consumed for that purpose should not exceed approximately 4¢ per therm (equal to the rate provided for gas taken under the contract on a 50% load factor). Provision was made that [fol. 16749] the cost of househeating gas should be computed under both the original and supplemental contracts and that petitioner would be charged the lowest of the two rates.

On or about September 29, 1939, by a third supplemental contract, Panhandle Eastern voluntarily extended the same househeating rate of not to exceed approximately 4¢ per therm, to 5,000 additional customers and increased the maximum daily demand to 100,000,000 cubic feet, the latter being increased to 125,000,000 cubic feet by a fourth supplemental contract under date of June 29, 1940.

To stimulate sales of househeating gas, petitioner established and announced a rate which is believed fair and reasonably compensatory for that class of service and soon succeeded in placing 25,000 househeating customers on its mains. Additional consumers sought the same type of service and, notwithstanding Panhandle Eastern had made a voluntary rate for 25,000 consumers at approximately 4¢ per therm and paid a bonus or premium for the business, it refused to furnish gas for other consumers at that rate, thus wilfully discriminating against petitioner.

Petitioner, as a public utility, is unable to discriminate as against others in the class of househeating consumers and Panhandle Eastern, although repeatedly requested to make househeating gas available to petitioner at the same rate, in amount sufficient to serve other consumers demanding the same type of service under the same conditions, has refused such gas to petitioner except that petitioner pay for it under the terms of the original con-

tract, or on a basis of about 62¢ per M.c.f. More than 40,000 housheating consumers are now attached to petitioner's distribution mains and it is believed that within a year or two that number will be increased to 60,000. [fol. 16750] No intervening circumstances or costs justify the refusal of Panhandle Eastern to make available to petitioner a rate for housheating gas, available to all applicants for that type of service, no higher than that which it voluntarily put into effect for the first 25,000 gas consumers attached to the mains of petitioner which were procured at the solicitation of and at large expense to Panhandle Eastern and its action constitutes unjust discrimination and undue prejudice within the meaning of the "Natural Gas Act".

8.

Sales of natural gas made by Panhandle Eastern in 1935 were approximately 15,979,390 M. c. f. and were the largest for any year since the pipe line was placed in operation. Its net earnings from operations for 1935 were approximately $1,494,650.91, wholly inadequate to provide any return to stockholders after the payment of interest and fixed charges and, in fact, creating an additional deficit of $326,054.03. Since 1935 the annual sales of Panhandle Eastern in M. c. f., and the amount taken by petitioner, have been as follows:

	Total Sales	Sales to Petitioner	% of Total
1936	26,747,931	3,957,058	14·8
1937	40,806,962	15,969,598	39·1
1938	41,185,762	16,032,297	39
1939	49,233,072	18,391,954	37·35
1940	56,394,762	22,281,273	39·5

As a result of the increased sales made possible by the Detroit contract, the corporate income of Panhandle has increased as indicated in the following statement:

	Net Earnings from Operations	Net Income Available to Stockholders
1934	$1,004,104 52	$ 872,006 76*
1935	1,494,660 91	326,054 03*
1936	2,859,441 49	1,711,185 43
1937	4,859,071 78	3,759,527 81
1938	4,386,985 18	3,059,223 74
1939	5,615,979 84	4,363,399 34
1940	5,727,645 85	4,548,323 98

*Deficit

[fol. 16751] Defendant, Panhandle Eastern, has expended for improvements and extensions to its physical properties approximately $15,500,000 during the years 1936 to 1939, inclusive, and $5,750,000 in 1940, a total of $21,250,000. The book value of its plant as of the close of 1940 is reported as approximately $65,000,000 with accrued depreciation reserves of over $9,000,000, leaving a net value of $56,000,000. The book value as of the beginning of 1936, less depreciation, was therefore between thirty-five and forty million dollars.

The contract with petitioner has resulted in a sale of approximately 40% of the total sales of Panhandle Eastern since its effective date, the sales in that area having increased in the same proportion as the increase along the length of the pipe line. Not only does petitioner take 40% of the total sales of Panhandle Eastern, but the gas purchased is delivered at one point with a minimum of accounting, testing and measurement expense. This is in direct contrast with the remaining sales which are made up of small deliveries along the entire length of a 1,200 mile transmission line.

Since 1935 the sales of Panhandle Eastern have increased 252% and the increased investment in facilities was approximately only 50%. Further the construction of the connecting line necessary to supply Detroit has enabled Panhandle Eastern to enormously increase its sales in Indiana, the increase by 1940 being more than eight billion cubic feet.

Further, the execution of this contract with its advantageous terms and the practical pledge of the great do-
[fol. 16752] mestic and industrial market of the metropolitan area of Detroit for the future, instantly and permanently established the economic soundness of the pipe line project and guaranteed its earning capacity over such a period of years that no question could arise as to its ability to fully amortize its facilities during the period of their useful life. It turned failure into success and transformed Panhandle Eastern from a losing venture to an investment of the highest class, enabling it to attract money at unusually low cost and making service possible and cheaper to the communities served along the line, together with many additional ones.

Therefore, in the establishment of rates the Detroit area is entitled to recognition not only for the lessened cost of delivery of so great a quantity, but for the contribution made by it, insuring the stability and permanence of the investment and extending a needed public service to communities otherwise unable to obtain it.

Notwithstanding the fact that the sales to petitioner enabled Panhandle Eastern to greatly increase its income, and notwithstanding its income has been constantly increasing, the cost of gas to petitioner for use in the Detroit area per unit of consumption has continually increased, whereas rates in other areas have been lowered.

Petitioner alleges that the rate charged by Panhandle Eastern for natural gas for resale for public consumption in the Detroit area under this contract is now unreasonable and excessive, and that Panhandle Eastern is earning more [fol. 16753] than a fair return on its property used and useful in the conduct of the business as a result thereof. It further alleges that said rates are unjustly discriminatory as against both the locality served and the class of service rendered, and that by a practical construction of the terms of said contract made and insisted upon by Panhandle Eastern, petitioner and the gas consumers to whom it distributes natural gas are suffering undue discrimination, prejudice, and disadvantage.

Wherefore petitioner prays for an investigation by the Federal Power Commission of the rates, classifications, and practices of Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Corporation and of the unjust discrimination, undue prejudice and disadvantages suffered by petitioner and the public by reason of the acts and practices of defendants and the practical interpretations placed by them upon their contracts and rate schedules. Petitioner further prays for a finding that the rates and charges of Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Corporation are unjust and unreasonable, and unlawfully preferential and cause undue prejudice and disadvantages to petitioner and the public in the Detroit metropolitan area, and that a schedule of fair and reasonable rates be established for natural gas sold for resale for

public consumption, and for such other relief as may be found just and right in the public interest.

And petitioner will ever pray, etc.

MICHIGAN CONSOLIDATED GAS COMPANY,
By Park Chamberlain,
Its Attorney,
Business Address: 815—15th St., N. W.
Washington, D. C.

By Frank L. Conrad,
Vice President,
Business Address: Of Petitioner,
415 Clifford Street,
Detroit, Michigan.

Dated: July 9, 1941.

[fol. 16754] State of Illinois,
County of Cook—ss.

On this 9th day of July, A. D. 1941 before me, a Notary Public, appeared Frank L. Conrad, to me known, who, being first duly sworn, did say that he is the Vice President of the Michigan Consolidated Gas Company, the petitioner herein; that he has read the foregoing petition and that the statements therein contained are true, except as to those matters therein stated upon information and belief which he believes to be true.

ANNETTE HELBIG,
Notary Public in and for
Cook County, Illinois.

My commission expires Aug. 25, 1942.

[fol. 16755] (Order Permitting Intervention of Michigan Consolidated Gas Company.)

United States of America

Federal Power Commission

Commissioners Claude L. Draper, Acting Chairman, Basil Manly, John W. Scott and Clyde L. Seavey. Leland Olds not participating.

July 12, 1941.

City of Detroit, Michigan, and County of Wayne, Michigan,
Docket No. G-200. vs.
Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Corporation.

It appearing to the Commission that:

(a) On July 10, 1941, the Michigan Consolidated Gas Company filed a petition with this Commission for leave to intervene in the above-entitled matter;

(b) The participation of the Michigan Consolidated Gas Company in this matter may be in the public interest;

The Commission orders that:

The Michigan Consolidated Gas Company be and it is hereby permitted to become an intervener and a party to this proceeding, subject to the rules and regulations of this Commission; provided, however, that the admission of the Michigan Consolidated Gas Company as an intervener and party to this proceeding shall not be construed as recognition by the Commission that such party might be aggrieved by any order of the Commission issued in this proceeding.

By the Commission.

LEON M. FUQUAY,
Secretary.

[fol. 16757] Answer of Michigan Gas Transmission Corporation to Petition of Intervener, Michigan Consolidated Gas Company.

(Received August 12, 1941, Federal Power Commission.)

Before the Federal Power Commission

City of Detroit and County of Wayne, Municipal Corporations, Complainants,
Docket No. G-200. vs.
Panhandle Eastern Pipe Line Company, and Michigan Gas Transmission Corporation, Defendants.

To The Honorable Members of the Federal Power Commission:

Michigan Gas Transmission Corporation, defendant, in answer to the petition of the intervener, Michigan Con-

solidated Gas Company, respectfully shows to the Commission as follows:

First: In answer to the paragraph of said petition, numbered "1": said defendant denies that it has any knowledge or information sufficient to form a belief as to the allegations thereof, except that said defendant admits that said petitioner is a public utility engaged in the sale and distribution in the City of Detroit and environs of natural gas, which it purchases from Panhandle Eastern Pipe Line Company.

Second: In answer to the paragraph of said petition, numbered "4": said defendant admits that it is a wholly [fol. 16758] owned subsidiary of Columbia Gas & Electric Corporation and that the Securities and Exchange Commission has held that Panhandle Eastern Pipe Line Company is a "subsidiary company" of Columbia Oil & Gasoline Corporation and that Columbia Oil & Gasoline Corporation is a "subsidiary company" of said Columbia Gas & Electric Corporation, as the term "subsidiary company" is defined in Section 2(a)(8) of the Public Utility Holding Company Act of 1935, but denies on information and belief that for any other purpose whatsoever said Panhandle Eastern Pipe Line Company is a subsidiary of said Columbia Oil & Gasoline Corporation or that said Columbia Oil & Gasoline Corporation is a subsidiary of said Columbia Gas & Electric Corporation or that said defendant is an affiliate of Panhandle Eastern Pipe Line Company.

Third: In answer to the paragraph of said petition, numbered "5": said defendant admits that on or about August 31, 1935, Panhandle Eastern Pipe Line Company entered into a written contract with said petitioner, and begs leave to refer to said contract for a full and accurate statement of the terms and conditions thereof and the effect thereof.

Fourth: In answer to the paragraph of said petition, numbered "6": said defendant admits that said contract provided for a price of 3¢ per therm for gas delivered thereunder between the Date of Initial Delivery and the Effective Date, as such terms are defined in said contract, and admits that said petitioner has paid under said contract the average rate per Mcf (based on a hypothetical

1,000 Btu gas) alleged in said paragraph for the years ended March 31, 1938 and March 31, 1939, respectively, but denies that the average rates paid under said contract for the year [fol. 16759] ended March 31, 1940, and the calendar year 1940, respectively, were as stated in said paragraph, and denies that it has any knowledge or information sufficient to form a belief as to the truth of the remaining allegations in said paragraph.

Fifth: In answer to the paragraph of said petition, numbered "7": said defendant denies that it has any knowledge or information sufficient to form a belief as to the truth of the allegations contained therein, except that it admits that Detroit, located in a northern area, affords a large market for househeating gas, that due to the seasonal character of this type of service the load factor is poor, and that certain supplemental contracts were entered into between Panhandle Eastern Pipe Line Company and said Michigan Consolidated Gas Company and begs leave to refer to the provisions of said supplemental contracts for a full and accurate statement of the terms and conditions thereof and the effect thereof.

Sixth: In answer to the paragraph of said petition, numbered "8": said defendant denies that it has any knowledge or information sufficient to form a belief as to the truth of the allegations contained therein, except that it admits that the sales of natural gas made by Panhandle Eastern Pipe Line Company to said petitioner for the years 1936, 1937, 1938, 1939 and 1940 were approximately of the respective amounts stated in said paragraph.

Seventh: In answer to the paragraph of said petition, numbered "9": said defendant denies that it has any knowledge or information sufficient to form a belief as [fol. 16760] to the truth of the allegations contained therein.

Eighth: In answer to the paragraph of said petition, numbered "10": said defendant denies that it has any knowledge or information sufficient to form a belief as to the truth of the allegations contained therein, except that it admits that the gas purchased by said petitioner from Panhandle Eastern Pipe Line Company for resale

and distribution in the City of Detroit and environs is delivered at one point.

Ninth: In answer to the paragraph of said petition, numbered "11": said defendant denies that the rates charged to said petitioner for gas have been increased.

Tenth: In answer to the paragraph of said petition, numbered "12": said defendant denies that it has any knowledge or information sufficient to form a belief as to the truth of the allegations contained therein.

Eleventh: Said defendant points out that while said petitioner prays for a finding that the rates of said Michigan Gas Transmission Corporation are unjust, unreasonable, and unlawfully preferential, it is nowhere in said petition alleges that said defendant's rates and charges are unjust, unreasonable, or unlawfully preferential, and that said petitioner makes no allegation as to the rates, charges, or practices of said Michigan Gas Transmission Corporation.

Wherefore, said defendant prays that said petition be dismissed as to said defendant, Michigan Gas Transmission Corporation.

MICHIGAN GAS TRANSMISSION CORPORATION,
By Walter C. Beckjord, President.

Office and Post Office Address: Suite 2901, No. 61 Broadway, New York, N. Y.

[fol. 16761] State of New York:
County of New York—ss.

Walter C. Beckjord, being duly sworn, deposes and says:

That he is the President of Michigan Gas Transmission Corporation, one of the defendants in the above entitled proceeding; that he has read the foregoing answer and knows the contents thereof and that the same is true to his own knowledge except as to the matters therein stated to be alleged upon information and belief and that as to those matters he believes it to be true.

WALTER C. BECKJORD.

Sworn to before me this 11 day of August, 1941.

Maude H. Curry,

Notary Public, New York County, N. Y. Co. Clk's No. 390, Reg. No. 2C-543 Nassau County Clerk's No. 35-C-40. Commission expires March 30, 1942.
(Notarial Seal)

[fol. 16762] Answer of Defendant, Panhandle Eastern Pipe Line Company, to the Petition of Michigan Consolidated Gas Company, Intervener

(Received August 18, 1941.)

Before the

Federal Power Commission

Docket No. G-200

City of Detroit and County of Wayne, Municipal Corporations, Complainants,

v.

Panhandle Eastern Pipe Line Company, and Michigan Gas Transmission Corporation, Defendants.

Michigan Consolidated Gas Company, Intervener.

To the Honorable Members of the Federal Power Commission:

Defendant, Panhandle Eastern Pipe Line Company, for its separate answer to the petition of intervenor, respectfully shows:

1. Answering paragraphs 1, 2, and 3 of said petition, this defendant admits the allegations thereof, except those with respect to the status of Michigan Gas Trans-[fol. 16763] mission Corporation under the Natural Gas Act, concerning which this defendant is without sufficient knowledge and information to form a belief.

2. Answering paragraph 4 of the petition, defendant denies the allegations thereof, except that it admits that under the provisions of the Public Utility Holding Company Act of 1935, it has been held by the Securities and Exchange Commission to be a subsidiary of Columbia Oil and Gasoline Corporation, which in turn is a subsidiary of Columbia Gas and Electric Corporation, and except that it admits on information and belief that Michigan Gas Transmission Corporation is a subsidiary of Columbia Gas and Electric Corporation.

3. Answering paragraph 5 of said petition, this defendant admits that on August 31, 1935, it entered into a written contract with intervener, then named Detroit City Gas Company, providing, among other things, for the sale and delivery of natural gas to intervener up to a maximum daily demand and at the rate set forth by petitioner and admits that the cost of gas per MCF at the different load factors enumerated by intervener is approximately correct when based on one thousand BTU gas. Defendant also admits that said contract of August 31, 1935, required intervener to utilize its existing storage holders and permitted it to use its water gas generating equipment for the purpose of leveling peaks, but alleges that intervener has not, by the use of its storage holders and gas generating plant, released pipe line capacity of this defendant for other and further public service.

4. Answering paragraph 6 of the petition, defendant admits that for the years ending March 31, 1938, March [fol. 16764] 31, 1939, and March 31, 1940, the average cost per MCF to intervener was approximately the amounts set forth in said paragraph, but denies that the average cost to intervener for the calendar year 1940 was 33.80 cents. It says that in truth the average cost of gas to intervener for the calendar year 1940, based on one thousand BTU gas, was approximately 32.01 cents per MCF or 1.79 cents less than the amount alleged by intervener. In this connection, the defendant points out that it is obviously erroneous and misleading to compare (as intervener has done) the rate for the calendar year 1940 with the rate for the preceding fiscal year ending March 31, 1940; and says that if a comparison between the period following March 31, 1940, and the preceding period is of importance, the comparison should be made by the use of the fiscal year ending March 31, 1941, rather than with the calendar year 1940, and that the actual cost to intervener for gas produced during the fiscal year ending March 31, 1941, was 31.88 cents.

5. Answering paragraph 7 of the petition, defendant admits that it is now and has at all times been desirous of promoting sales for househeating purposes, as well as any other purposes for which gas sold to intervener might

be suitably used, and that it paid intervener bonuses for 18,000 househeating customers added to intervener's mains. It admits that by a Supplemental Contract of September 29, 1939, it entered into a contract with intervener, increasing this defendant's maximum daily obligation to 100,000,000 cubic feet and extended the househeating rate provided in the contract of June 2, 1936, to include an amount of natural gas equal to the requirements of an additional 5,000 househeating customers and that by contract dated June 29, 1940, defendant's maximum daily obligation was further increased to 125,000,000 cubic feet.

[fol. 16765] It admits that the original contract and all supplemental contracts were entered into by defendant voluntarily and without coercion of any kind and that said contracts have resulted in the sales of substantial volumes of gas to intervener.

It admits that intervener has succeeded in placing 25,000 househeating customers on its mains, but denies that it has wilfully or otherwise discriminated against intervener or subjected it to undue prejudice. It denies that the contracts heretofore entered into between intervener and this defendant have been at the solicitation of this defendant, but says that said contracts were entered into as a result of arms length bargaining between intervener and this defendant and that the supplemental contracts relating to househeating customers were excuted as a result of solicitation by intervener therefor.

Defendant denies that it has ever required intervener to pay for househeating gas at the rate of 62 cents per MCF during any year of operations under said original contract or said supplemental contract. It admits that more than 40,000 househeating customers are now attached to intervener's distributing mains.

Defendant denies that it his ever placed any limitation on the number of househeating customers which intervener might place on its mains and states that the only limitation with respect to househeating customers contained in said contracts is that intervener's right to purchase gas thereunder at a rate which would not exceed four cents per therm, was limited to a total of 25,000 customers.

Further answering said paragraph 7, defendant alleges that the actual unit cost to intervener for quantities of gas purchased for resale to househeating customers in [fol. 16766] excess of 25,000 in number is dependent upon the rate of growth of its househeating business from year to year and upon the relation of the demand contributed or created by househeating customers in excess of 25,000 to the consumption during the year of househeating customers in excess of 25,000. Defendant further alleges that intervener has been purchasing gas from defendant for resale to househeating customers on a "lagging demand" and for that reason its unit cost of gas for resale to househeating customers in excess of 25,000 has been substantially less than four cents per therm. Defendant alleges that the average cost per therm to intervener of gas resold to such excess househeating customers during the calendar year 1940 was only 2.395 cents per therm; and that, based upon reasonable estimates, its average cost of gas for resale to househeating customers in excess of 25,000 during the calendar year 1941 will be less than 3.5 cents per therm and may not exceed the cost during the calendar year 1940, depending upon the rate of growth of househeating business during the calendar year 1941.

Further answering, defendant alleges that by letter to intervener, dated July 18, 1940, it offered to substitute for the rate provided in the aforesaid contract, as supplemented and amended, a different form of rate which would result in a charge of not more than four cents per therm for natural gas sold to it for resale to househeating customers, regardless of the number thereof, but said offer was not accepted. Defendant also alleges that in April, 1941, it indicated to intervener in writing a willingness to recommend to its Board of Directors another rate schedule in substitution for the existing rate schedule under the househeating portion of which intervener could purchase natural gas for resale to an unlimited number of [fol. 16767] househeating customers at a cost of four cents per therm. Defendant states that to this date intervener has not indicated a willingness to accept said rate schedule, although it would effect a substantial savings to intervener.

6. Answering paragraph 8 of the petition, defendant denies that the figures set forth by intervener purporting to represent defendant's total sales and net earnings from operations are correct, but in this connection states that said figures reasonably approximate the correct figures for consolidated sales and consolidated net earnings from operations of defendant and its subsidiary companies. Defendant admits that the other figures set forth in paragraph 8 of the petition reasonably approximate the correct figures.

7. Answering paragraph 9 of the petition, defendant admits that the amount of expenditures for improvements and extensions to its physical properties from 1936 to 1940, inclusive, reasonably approximate the amount set forth therein. Defendant admits that its books reflect a plant account of approximately sixty-five million dollars and that entries for depreciation, depletion and amortization, as recorded on its books, are in excess of nine million dollars, but denies that the figures set forth in said paragraph represent either the value of defendant's plant, or the actual depreciation, depletion or amortization thereof.

8. Answering paragraph 10 of the petition, defendant admits that its present sales to intervener are approximately forty per cent of its total sales.

Defendant admits that its sales and investment in facilities have increased approximately as set forth in said [fol. 16768] petition, and admits that through use of the connecting line now used in supplying Detroit, defendant has increased its sales in the State of Indiana.

In this connection, defendant shows that when the decision was finally reached to supply gas for use in the City of Detroit and it became necessary, in order to supply that market, for defendant to increase its other facilities, both with respect to pipe line and reserves, the management of defendant decided to increase its facilities to such an extent that by the use of that same line for transporting this gas it could market additional gas in the State of Indiana. Likewise, when the connecting line referred to was constructed, it was constructed with facilities adequate for use in transporting gas not only to the

City of Detroit but to various points in the State of Indiana.

Defendant admits that operations under its contract with intervener have contributed to the successful operation of defendant's project, but denies that there was any greater earnings resulting from such operations than from equivalent sales to defendant's other customers or from sales which might have been negotiated in other markets or to other purchasers who might have desired to furnish gas to the City of Detroit if intervener had not seen fit to enter into a contract with defendant.

Defendant further alleges in this connection that the contract between it and intervener has been one extremely valuable to intervener in that it has made available to intervener for distribution in the Detroit area greater volumes of gas than theretofore distributed by it in said area, at a cost to it which was, as stated in a letter from the President of intervener to its customers, written in June, 1936, [fol. 16769] thirty-four per cent lower than the lowest previous proposal offered it by any company.

Defendant denies that from a regulatory or any other standpoint intervener is entitled to special recognition or favors greater than those allowed other customers of defendant with respect to the prices charged for gas or with respect to contractual provisions relating to the price of gas.

9. Answering paragraph 11 of the petition, defendant denies that, eliminating the period of preliminary build-up of intervener's load, there has been any material increase in the price of gas charged intervener by defendant. In this connection, defendant says that such slight variations in the unit cost of gas under the contract and various supplements as have occurred during the several years since the preliminary build-up period closed, such slight variations have been the result of the manner selected by intervener in the operation of its business and failure to take advantage of privileges granted by said contract which, if exercised, might reasonably have resulted in a substantially lower unit cost than that now being paid.

10. Answering paragraph 12 of the petition, defendant denies that its rates for natural gas for resale for pub-

lic consumption in the Detroit area are unreasonable or excessive, and denies that it is earning more than a fair rate on its property used and useful in the conduct of its business. Defendant further denies that its rates are unjustly discriminatory, either as against the locality served or as to the class of service rendered, and denies that by reason of a practical construction of the terms of its contract with intervener, or otherwise, intervener and [fol. 16770] the gas consumers to whom it distributes natural gas are suffering undue discrimination, prejudice or disadvantage.

Wherefore, defendant prays that the petition of intervener, Michigan Consolidated Gas Company, be dismissed or denied.

Respectfully submitted,

PANHANDLE EASTERN PIPE LINE COMPANY,
By G. J. Neuner, Vice President.

New York, N. Y.

Dated, August 19, 1941.

[fol. 16775] (Order of Federal Power Commission Denying Motions to Dismiss of Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Corporation.)

United States of America,

Federal Power Commission.

Commissioners: Leland Olds, Chairman, Claude L. Draper and John W. Scott. Basil Manly and Clyde L. Seavey not participating.

September 2, 1941.

City of Detroit, Michigan, and County of Wayne, Michigan,

Docket No. G-200, vs.

Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Corporation.

Upon consideration of a motion filed by Panhandle Eastern Pipe Line Company on August 20, 1941, and motion filed by Michigan Gas Transmission Corporation on August 21, 1941, to dismiss the proceeding herein upon certain grounds as specified in said motions, and the request for oral argument thereon;

It appearing to the Commission that an order has this day been adopted consolidating this proceeding with the proceedings at Docket No. G-207 in the matter of Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Corporation, and that no good cause exists for granting the said motions;

The Commission orders that:

The motions be and they are hereby denied.

By the Commission.

LEON M. FUQUAY,
Secretary.

[fol. 16776] Order Instituting Investigation.

United States of America,

Federal Power Commission.

Commissioners) Leland Olds, Chairman, Claude L. Draper, Basil Manly, John W. Scott and Clyde L. Seavey.

May 22, 1941.

In the Matter of

Panhandle Eastern Pipe Line Company,
and
Michigan Gas Transmission Corporation.

Docket No. G-207.

It appearing to the Commission that:

(a) On February 28, 1941, the City of Detroit and the County of Wayne, Michigan, both of which are municipalities within the meaning of the Natural Gas Act, filed, at Docket No. G-200, a petition which, among other things, alleges in substance that the Panhandle Eastern Pipe Line Company is engaged in the transportation of natural gas in interstate commerce from producing fields in the States of Texas and Kansas to a point of delivery near the City of Detroit; that it is also engaged in the sale of such gas to the Michigan Consolidated Gas Company for resale in said City of Detroit and County of Wayne; that such gas is transported from a point on the Indiana-Illinois boundary line to a point at or near the City of Detroit by the Michigan Gas Transmission Corporation for the account of the Panhandle Eastern Pipe Line Company, for which transportation Panhandle Eastern Pipe Line Company pays its affiliate, Michigan Gas Transmission Corporation, an excessive rate or charge; that the rates and charges demanded and collected by Panhandle Eastern Pipe Line Company from the Michigan Consolidated Gas Company are unjust, unreasonable, and unduly discriminatory; and said City of Detroit and County of Wayne request this Commission, after investigation, to fix and determine the just and reasonable rates to be thereafter observed and in force in respect of such transporta-

tion and sale of natural gas for resale in said City and County;

(b) Michigan Gas Transmission Corporation filed an answer to said petition on March 28, 1941, denying, among other things, that it is affiliated with Panhandle Eastern Pipe Line Company, or "that the division to Michigan Gas Transmission Corporation of the rates and charges maintained by Panhandle Eastern Pipe Line Company are unjust and unreasonable, or that any charges of Michigan [fol. 16777] Gas Transmission Corporation in connection with the sale or delivery of gas to Michigan Consolidated Gas Company are excessive, unjust or unreasonable";

(c) Panhandle Eastern Pipe Line Company filed an answer to said petition, on April 3, 1941, denying, among other things, that it is affiliated with the Michigan Gas Transmission Corporation, or that it is controlled by the Columbia Gas & Electric Corporation, or that its rates are unjust, unreasonable, or discriminatory;

(d) The Panhandle Eastern Pipe Line Company is engaged in the transportation of natural gas in interstate commerce through a transmission pipe line extending from the State of Texas to a point on the border line between the States of Illinois and Indiana, and the sale in interstate commerce of natural gas for resale, and may be a natural-gas company within the meaning of the Natural Gas Act;

(e) The Michigan Gas Transmission Corporation is engaged in the transportation of natural gas in interstate commerce through a transmission pipe line extending from a point on the border line between the States of Illinois and Indiana to a point at or near the City of Detroit, Michigan, and the sale in interstate commerce of natural gas for resale, and may be a natural-gas company within the meaning of the Natural Gas Act;

(f) Natural gas sold by the Panhandle Eastern Pipe Line Company to the Michigan Consolidated Gas Company for resale in the City of Detroit is transported by Michigan Gas Transmission Corporation through its interstate transmission pipe line for the account of Panhandle Eastern Pipe Line Company;

(g) It is necessary and proper, in the public interest, and to aid in the enforcement of the provisions of the Natural Gas Act that an investigation be instituted by the Federal Power Commission, on its own motion, (1) to determine whether the Panhandle Eastern Pipe Line Company or the Michigan Gas Transmission Corporation is a natural-gas company within the meaning of the Natural Gas Act; and (2) into and concerning all rates, charges, or classifications demanded, observed, charged, or collected by the Panhandle Eastern Pipe Line Company and the Michigan Gas Transmission Corporation in connection with any transportation or sale of natural gas subject to the jurisdiction of the Commission, and any rules, regulations, practices, or contracts affecting such rates, charges, or classifications;

The Commission, on its own motion, orders that:

[fol. 16778] An investigation of the Panhandle Eastern Pipe Line Company and the Michigan Gas Transmission Corporation be and it is hereby instituted for the purpose of enabling the Commission:

(1) To determine with respect to each of said companies (a) whether it is a natural-gas company within the meaning of the Natural Gas Act, and (b) whether in connection with any transportation or sale of natural gas subject to the jurisdiction of this Commission, any rates, charges, or classifications demanded, observed, charged, or collected, or any rules, regulations, practices, or contracts affecting such rates, charges, or classifications, are unjust, unreasonable, unduly discriminatory, or preferential; and

(2) If the Commission, after hearing has been had, shall find that the Panhandle Eastern Pipe Line Company or the Michigan Gas Transmission Corporation is a natural-gas company within the meaning of the Natural Gas Act, and that any of their rates, charges, classifications, rules, regulations, practices, or contracts, subject to the jurisdiction of this Commission, are unjust, unreasonable, unduly discriminatory, or preferential, to determine and fix by appropriate order or orders, just and reasonable

rates, charges, classifications, rules, regulations, practices, or contracts to be thereafter observed and in force.

By the Commission.

J. H. GUTRIDE,
Acting Secretary.

[fol. 16779] Order Consolidating Proceedings For Purposes of Hearing.

United States of America,

Federal Power Commission.

Commissioners: Leland Olds, Chairman, Claude L. Draper and John W. Scott. Basil Manly and Clyde L. Seavey not participating.

September 2, 1941.

City of Detroit, Michigan, and County of Wayne, Michigan,

Docket No. G-200. vs.

Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Corporation.

In the Matter of

Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Corporation.

Docket No. G-207.

It appearing to the Commission that:

(a) By order of June 10, 1941, the Commission fixed the date of hearing in the above-entitled proceeding at Docket No. G-200 for July 15, 1941, and hearing thereon was held on July 15, 16, and 18 and was adjourned to reconvene on September 2, 1941;

(b) The proceedings in the above-entitled matters at Docket No. G-200 and Docket No. G-207 involve similar issues and facts;

The Commission orders that:

(A) A public hearing in the proceeding at Docket No. G-207 be held commencing on September 2, 1941, at 9:45

a. m. (E.S.T.), at 1800 Pennsylvania Avenue, N. W., in the City of Washington, D. C.;

(B) The proceedings in the above-entitled matters at Docket No. G-200 and Docket No. G-207 be and they are hereby consolidated for the purposes of hearing thereon.

By the Commission.

LEON M. FUQUAY,
Secretary.

* * * * * * *

[fol. 16799] (Petition of Panhandle Eastern Pipe Line Company for Continuance of Hearing.)

(Received February 4, 1942, Federal Power Commission.)

Before the Federal Power Commission of the United States

In the matter of

City of Detroit, Michigan, and County of Wayne, Michigan, Complainants,

Docket No. G-200 vs.

Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Corporation, Defendants.

In the matter of

Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Corporation.

Docket No. G-207.

Panhandle Eastern Pipe Line Company, one of the defendants in the above-entitled cause, hereby petitions the Commission for a continuance of the hearing now in progress, and as grounds therefor states:

I.

Status of Hearing.

The hearing in these proceedings has been in progress since July 15, 1941. Short recesses only have been taken, these having been solely for such periods of time as were necessary to enable the defendants to prepare their direct

testimony and also to enable counsel for other parties to prepare for cross-examination of defendants' witnesses.

[fol. 16800] The direct testimony of defendant Panhandle Eastern Pipe Line Company was completed on October 29, 1941, except for such additional testimony as may be required to complete certain phases of the case. The direct testimony of defendant Michigan Gas Transmission Corporation was completed on November 19, 1941. Five days thereafter, on November 24, 1941, Commission counsel and counsel for the complainants and interveners commenced cross-examination of defendant Panhandle Eastern Pipe Line Company's witnesses. This cross-examination has been continuous, except for a brief recess during the holiday season. Since cross-examination commenced, more than 5,000 pages of oral testimony have been taken, the entire record now containing more than 7500 pages of oral testimony and more than 150 exhibits. The cross-examination of witnesses offered by defendant Panhandle Eastern Pipe Line Company on their direct testimony to date has now been practically completed. However, cross-examination of the witnesses offered by defendant Michigan Gas Transmission Corporation has not been commenced. Counsel for all parties to these proceedings have fully cooperated with the Trial Examiner in expediting the hearing.

The defendants Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Corporation, while joint defendants, have to date operated under entirely separate managements, and have therefore presented their evidence separately. They have offered different witnesses, and [fol. 16801] have been represented by separate counsel. Defendant Panhandle Eastern Pipe Line Company has not participated in any way in the development or presentation of the evidence offered by Michigan Gas Transmission Corporation.

II.

The Changed Status of Defendants' Corporate Structures and Relations

By an order of the Securities and Exchange Commission, dated January 21, 1942 (Exhibit No. 147 in these proceedings), defendant Panhandle Eastern Pipe Line Company was authorized

(a) To acquire from Columbia Oil & Gasoline Corporation all the Class A preferred stock of Panhandle Eastern Pipe Line Company of the par value of $10,000,000;

(b) To acquire from Columbia Gas & Electric Corporation all of the stock and debt of Michigan Gas Transmission Corporation and of Indiana Gas Distribution Corporation at the cost of $10,780,840.59 for the Michigan Corporation and $153,698.20 for the Indiana Corporation;

(c) To acquire from The Ohio Fuel Gas Company certain pipe lines and other property in the States of Indiana and Ohio at a price of $439,326.08;

(d) To issue and sell a new class of preferred stock to the amount of 150,000 shares of the par value of $100 per share;

[fol. 16802] (e) To issue and sell first mortgage and first lien bonds to the amount of $10,000,000.

Pursuant to proper notice, a contract for the sale of these bonds and the issue of preferred stock was entered into on February 2, 1942, and the sale thereof to be consummated on February 6, 1942, has been approved by the Securities and Exchange Commission. A copy of said contract has been filed as an exhibit in these proceedings. The proceeds from the sale of said bonds and stock are to be used in liquidating the outstanding Class A preferred stock of defendant Panhandle Eastern Pipe Line Company, to the extent of $10,000,000; to the payment of the purchase price for the stock and debt of Michigan Gas Transmission Corporation and Indiana Gas Distribution Corporation, and as payment for the properties to be acquired from The Ohio Fuel Gas Company. Any balance remaining is to be expended in connection with capital expenditures now being made by Panhandle Eastern Pipe Line Company for expansion of its facilities.

All parties to the transactions above outlined have agreed that the transactions will be closed on February 6, 1942, at which time Michigan Gas Transmission Corporation and Indiana Gas Distribution Corporation will become wholly owned subsidiaries of defendant Panhandle Eastern Pipe Line Company, and on the same date the pro-

perties of Ohio Fuel Gas Company will become a part of the Panhandle Eastern Pipe Line Company system.

[fol. 16803] Obviously, upon the consummation of these transactions, the corporate structures and relations of the defendants in these proceedings will be changed. Defendant Panhandle Eastern Pipe Line Company will then have securities outstanding different in certain respects from those heretofore outstanding, and the operating problems of defendants Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Corporation must be considered from a consolidated standpoint rather than from the standpoint of a separate entities.

III.

Defendant Panhandle Eastern Pipe Line Company Requires Time to Consider and to Prepare Evidence Concerning the Effect of the Change in Status Upon its Present and Future Operations

Upon the consummation of these transactions on February 6, 1942, it will become necessary for the executives and employees of Panhandle Eastern Pipe Line Company, in connection with present war emergency requirements, and these corporate changes, to study the operating practices of Michigan Gas Transmission Corporation, with a view to determining whether any changed methods of operation would enable the two companies more adequately to serve the public interest. This will include, among other things, a consideration of whether additional pipe line capacity or power should be installed by Michigan Gas Transmission Corporation so that its facilities could be used to the best advantage in connection with the necessary expansion of Panhandle Eastern Pipe Line Company's system to serve its customers.

[fol. 16804] It will also be necessary for the executives of Panhandle Eastern Pipe Line Company to prepare and to supervise the preparation of such exhibits, for introduction in these proceedings, as will be necessary to reflect the consolidated operations of these properties. The present record does not comprehend such a situation. It is expected that such exhibits will not be numerous, and they will be supplemental to those now in evidence. They are,

however, necessary, in order that the record may reflect the correct situation as it has now developed.

IV.

General World Situation

In further support of the prayer of this motion, defendant Panhandle Eastern Pipe Line Company represents that since the hearings in these proceedings commenced, and in fact since the conclusion of its direct testimony, the United States has been precipitated into a state of war. During this period, and largely as a result of world conditions, there has been a more rapid rise in price levels than was originally anticipated. Data respecting these matters should also be prepared and presented in these proceedings.

Wherefore, defendant Panhandle Eastern Pipe Line Company respectfully prays that the Commission grant a continuance of the hearing in these proceedings for a period of at least sixty (60) days.

Respectfully submitted,

PANHANDLE EASTERN PIPE LINE COMPANY.
By J. D. Creveling,
President.

[fol. 16805] District of Columbia,
United States of America,—ss.:

J. D. Creveling, being duly sworn, deposes and says: that he is President of Panhandle Eastern Pipe Line Company, a party to the above-entitled proceedings; that he has read the foregoing petition, and knows the contents thereof; that the same are true as stated, except as to matters and things if any, stated on information and belief, and that as to those matters and things, he believes them to be true.

J. D. CREVELING.

Subscribed in my presence, and sworn to before me, by the affiant above named, this 4th day of February, 1942.

(Seal) Notary Public.

My Commission expires

[fol. 16806] I hereby certify that I have this day served the foregoing document upon all parties of record in these proceedings by delivery in person to the following.

Harry Littman, Esq.,
Federal Power Commission,
Washington, D. C.

James H. Lee, Esq.,
City of Detroit,
Washington, D. C.

Harry Goodman, Esq.,
County of Wayne,
Washington, D. C.

Park Chamberlain, Esq.,
Michigan Consolidated Gas Company,
Washington, D. C.

Milton C. Baldridge, Esq.,
Michigan Gas Transmission Corporation,
Washington, D. C.

Dated at Washington, D. C., this 4th day of February, 1942.

D. H. CULTON,
Of counsel for
PANHANDLE EASTERN PIPE LINE COMPANY.

Objections of Complainants to Defendants' Motion for Continuance.

[fol. 16809] (Received February 11, 1942, Federal Power Commission.)

Now come the City of Detroit, and the County of Wayne, the Complainants, by their respective attorneys, and object to the granting of a continuance to the defendants for a sixty day period, as requested, for the following reasons:

This case, though prosecuted with diligence, has, nevertheless, required a protracted time. It is the plaintiffs' contention that, upon the evidence admitted, a very sub-

stantial rate reduction will be in order, and that, prior to the inception of this case, the defendants were maintaining unjust and unreasonable rates as against the consumers represented by the complainants; and that, if reasonable rates had been in effect from the beginning of this case, the saving to all of the defendants' customers would have [fol. 16810] amounted to a figure in excess of Ten Thousand ($10,000.00) Dollars per day. If complainants' contentions are well founded, the defendants' customers are losing in excess of Ten Thousand ($10,000.00) Dollars per day for each day the hearing is protracted.

There has been allowed to the defendants an adjournment from February 4, 1942 to February 23, 1942, and, in this interim, the defendants ought to be able to make adequate preparations for such further presentation of evidence as may be proper.

The conditions of the war actually require that the price of great natural resources be fixed at the lowest possible level, and that controversies in respect to rates be determined with the utmost diligence.

It is recognized that persons who might be engaged with matters in connection with this case may have, at various times, paramount duties to attend to, but such circumstances, as they arise, should be determined simply as a matter of orderly trial procedure under the directions of the examiner, and are wholly apart from protracted delays amounting to two months.

Wherefore, complainants respectfully submit that the motion for continuance be denied.

WILLIAM E. DOWLING,
Prosecuting Attorney for Wayne County.

HAROLD GOODMAN,
Special Assistant Prosecuting Attorney.

PAUL E. KRAUSE,
Corporation Counsel for the City of Detroit.

JAMES H. LEE,
Assistant Corporation Counsel.

[fol. 16811] Order Denying Petition for Continuance and Changing Place of Hearing.

United States of America

Federal Power Commission.

Commissioners Leland Olds, Chairman, Claude L. Draper, Basil Manly, John W. Scott and Clyde L. Seavey.

February 17, 1942.

City of Detroit, Michigan, and County of Wayne, Michigan,
Docket No. G-200. vs.
Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Corporation.

In the Matter of

Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Corporation.

Docket No. G-207.

Upon application, filed February 4, 1942, by Panhandle Eastern Pipe Line Company, Defendant, for a continuance of the hearing in this proceeding for a period of at least 60 days; and

It appearing that:

(a) The City of Detroit, Michigan, and County of Wayne, Michigan, Complainants, on February 11, 1942, filed objections to the said petition for continuance;

(b) Subsequent to the filing of said petition for continuance, the hearing was recessed by the Commission's Examiner to reconvene on February 23, 1942;

(c) No good cause exists for a 60-day postponement of the hearing;

The Commission orders that:

[fol. 16812] (A) The said petition for a continuance of 60 days be and is hereby denied;

(B) The hearing in this proceeding be resumed on February 24, 1942, at 9:45 a. m., C. W. T., in Room 406, County Building, at Detroit, Michigan.

By the Commission.

LEON M. FUQUAY,
Secretary.

[fol. 16814] (Petition of Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Corporation for Continuance of Hearing.)

(Received February 28, 1942, Federal Power Commission.)

Before the Federal Power Commission of the United States.

In the matter of

City of Detroit, Michigan, and County of Wayne, Michigan, Complainants,

Docket No. G-200. vs.

Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Corporation, Defendants.

In the matter of

Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Corporation.

Docket No. G-207.

Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Corporation, defendants in the above numbered and entitled proceedings, hereby petition and move the Commission for a continuance of the hearing now in progress therein, and as grounds therefor state:

Since the dates upon which these defendants presented their direct evidence in these proceedings the surrounding conditions have so changed as a result of matters and happenings not caused by them and not predictable when such evidence was prepared and presented, that many of the estimates and much of the factual data on which estimates and other testimony were based, do not now apply. Therefor, the Commission cannot, without consideration of such changed conditions and the manifold present and potential results thereof, determine or be in a position properly or reasonably to determine the issues involved in these proceedings in a manner calculated to give effect to the actual-[fol. 16815] ities which now confront these defendant corporations.

In this connection defendants point out:

These proceedings were instituted in the Spring of 1941, and in July 1941 defendants were required to be prepared

to present their evidence at hearings commencing on September 2, 1941. Defendants promptly commenced and carried forward the preparation of their direct testimony, based on June 30, 1941 conditions, and as expeditiously as possible actually completed such preparations and the presentation of such evidence to this Commission. As a matter of fact, subject to certain reservations, Panhandle Eastern Pipe Line Company completed the presentation of its direct evidence on October 29, 1941 and Michigan Gas Transmission Corporation completed the presentation of its direct evidence on November 19, 1941.

In order properly to present their evidence, however, defendants at that time could only anticipate and estimate sales and market conditions for the immediate future in the light of conditions theretofore existing. Thus, market conditions at the various points of delivery were perforce treated as normal. Prices reasonably expected to be received for gas sold were based on those then existing. With respect to defendants' largest single customer, Michigan Consolidated Gas Company, the estimates were prepared and presented on the basis of reasonable expectancy in the light of the 1940-1941 maximum demand and on information received from its customer as to its then expected 1941-1942 maximum demand. However, as a result of information now available, and as a result of matters and events which have transpired since defendants' closed the presentation of their direct evidence, it is now apparent [fol. 16816] that the estimates then made do not properly, reasonably or adequately reflect the conditions which now obtain.

With respect to the Detroit market, the estimates offered by defendants were based on the assumption that the maximum day's purchases for that market during the winter season 1941-1942 would at least equal the maximum provided under the contract, to wit: 125,000,000 cu. ft. As of today, although defendants are reliably informed that the maximum Detroit market requirements for gas have already exceeded 140,000,000 cu. ft. per day in 1942, the maximum volume actually taken from defendants under said contract has at no time exceeded 110,000,000 cu. ft., thus resulting in the establishment of a maximum day at least 15,000,000 cu. ft. less than that heretofore estimated,

and thereby greatly reducing the demand charge collectible by defendants with a resultant substantial decrease in their revenues. This result was made possible by the exercise by the customer of its contractual right to "shave its peaks" through the operation of its manufactured gas facilities.

Defendants further show that since their evidence was prepared and introduced in these proceedings, the United States has been forced into an all-out war and is now faced with a national emergency which unquestionably will exist for some time. These defendants have not escaped and cannot escape the results of such national emergency. Defendants directly or indirectly furnish gas to more than two hundred defense industries and have been and are now continuously being requested to furnish service to many others, with which requests defendants, to the extent of their capacity, desire to comply. Because of the importance [fol. 16817] of defendants' lines and properties from the standpoint of the national defense effort, defendants have been warned by the War Department and by the Federal Bureau of Investigation of the possibility of attempts at sabotage. Following defendants' best judgment of the proper protection which should be afforded to these properties against such potential acts of sabotage and in line with views expressed by said Federal Agencies, defendants have organized a property protection department. To date defendants have employed in this department more than one hundred carefully selected men at substantial additional annual expense. This expense will be increased from time to time because of the necessary addition of other employees for these purposes.

Defendants further represent that on February 16, 1942, the Federal War Production Board issued its official "Limitation Order L-31", applicable to the States of Michigan, Ohio, Indiana, Illinois and Missouri, in which defendants operate, as well as to numerous other States. This order, a copy of which (together with the release of the War Production Board which accompanied it) is attached hereto as "Exhibit A". The order has been incorporated in the record in these proceedings. It was promulgated in the interest of national defense and, although styled "to curtail consumption of natural gas" is rather an order issued for

the purpose of controlling and determining the use to which natural gas may be put under certain defined circumstances, as well as for the purpose of determining priorities of use for such gas. The provisions of said order impose upon these defendants certain definite and significant obligations not theretofore existing; similarly it imposes new obligations on defendants' customers, and finally it imposes new obligations on the customers of defendants' customers.

[fol. 16818] The full extent of the effects of such order upon defendants and their customers has not yet been determined and cannot reasonably be determined for some time; yet it is already apparent that as a result of such order, defendants' previous estimates with respect to the volumes of gas which they may sell to their various classes of customers will necessarily be materially altered and that all former estimates of gross revenues will be substantially decreased. This result necessarily flows from the circumstances that priority in use is provided for gas sold to manufacturing industries engaged in war activities. Moreover the full extent of the effects of said order cannot be determined without considering the purpose for which each ultimate user of gas is purchasing such gas, and also the standby facilities available to such user or to the distributor furnishing such gas. These defendants now serve directly or indirectly more than two hundred industries directly engaged in defense activities, as well as approximately seven hundred thousand domestic, commercial and other industrial users of gas. A determination of the effect of this important federal order on defendants' operations and on the revenues to be received therefrom is essential, and obviously can be determined only as a result of careful and detailed analysis. Such analysis will, of necessity, require considerable time. This is obviously a situation not at all of defendants' making, but results wholly from the war in which the nation is now engaged.

Furthermore, it appears upon the record herein that large capital expenditures will be required in the immediate future for additions and improvements in defendants' trans- [fol. 16819] mission and production facilities, in order to enable them more adequately to serve their existing market areas, and in order to provide for such increases in sales of gas as would normally have been expected therein. Such

capital expenditures are still required, probably at an accelerated rate in [in] order to meet war conditions and demands. In developing their direct evidence in these proceedings, defendants estimated and then believed that the revenues resulting from such increased sales would produce returns comparable to those received from existing sales. Under normal conditions defendants believe that such assumptions would have been justified, but the regulations and limitations contained in said War Production Board Order L-31 have so materially altered the surrounding circumstances and conditions as to render such assumptions wholly unwarranted and presently untenable. Said order would, in effect, confine additional sales of gas to uses less remunerative per unit than would otherwise be the case in the absence of such limitation. Obviously, a careful analysis of such changed situation must be reflected in the record herein before any fair or reasonable evaluation of defendants' rates can be arrived at.

This is a matter of paramount import. In the light of the considerations above outlined; in view of the complex and wholly unprecedented situation which now confronts these defendants; in view of the serious nature of the factors which have intervened since the presentation of defendants' direct testimony in these proceedings, and by reason of the state of war which has come into being since such presentation, and the order of the War Production Board herein mentioned, defendants now ask this Commission to direct a continuance of the hearings in said proceedings [fol. 16820] for a period of not less than one hundred and twenty days, in order to afford to these defendants a minimum opportunity to attempt to ascertain the effect of and to develop and present evidence in respect to the probable effect upon them of such changed conditions, and in order to afford to these defendants that measure of due process of law to which they are entitled under the Constitution of the United States.

Respectfully submitted,

PANHANDLE EASTERN PIPE LINE COMPANY,
By J. D. Creveling, Its President.

MICHIGAN GAS TRANSMISSION CORPORATION,
By J. D. Creveling, Its President.

[fol. 16821] State of Michigan,
County of Wayne—ss.

J. D. Creveling, being duly sworn, deposes and says: that he is President of Panhandle Eastern Pipe Line Company, and President of Michigan Gas Transmission Corporation, parties to the above-entitled proceedings; that he has read the foregoing petition, and knows the contents thereof; that the same are true as stated, except as to matters and things if any, stated on information and belief, and that as to those matters and things, he believes them to be true.

J. D. CREVELING.

Subscribed in my presence, and sworn to before me by the affiant above named, this 27th day of February, 1942.

(Seal) KATHERYN STIMMELL,

James H. Lee, Esq., City of Detroit, Detroit, Michigan.

Harry Goodman, Esq., County of Wayne, Detroit, Michigan.

Park Chamberlain, Esq., Michigan Consolidated Gas Company, Detroit, Michigan.

Dated at Detroit, Michigan, this 28th day of February, 1942.

D. H. CULTON.

Of counsel for
Panhandle Eastern Pipe Line Company

[fol. 16823] Exhibit A.

Title 32—National Defense

Chapter IX—War Production Board

Subchapter B—Division of Industry Operations

Part 1056—Natural Gas

Limitation Order L-31

To Curtail Consumption of Natural Gas

Whereas, because of increased gas requirements for war production and civilian uses, and because of scarcity of materials for the construction of pipe lines and other facilities, shortages of natural gas have occurred in certain areas of the United States and are threatened in others; and

Whereas, during periods of adverse weather conditions, the demand for natural gas in many areas will increase beyond the capacity of existing facilities to meet such demand; and

Whereas, the limitations upon deliveries of natural gas and the integration of gas system operations hereinafter ordered are necessary in order to maintain gas deliveries to war industries and essential civilian services;

Now, Therefore, It Is Ordered That:

Part 1056.1—General Limitation Order

(a) Definitions. For the purposes of this Order:

(1) "Person" means any individual, partnership, association, business trust, corporation, governmental corporation or agency, or any organized group of persons whether incorporated or not.

(2) "Utility" means any person in the United States supplying natural gas or mixed natural and manufactured gas, directly or indirectly, for general use by the public.

(3) "Consumer" means an ultimate user of gas purchased or otherwise received from any Utility.

(4) "Standby Facilities" means equipment in serviceable operating condition designed to use oil, electricity, coal

or other fuel to replace natural gas, and for the operation of which a supply of such fuel is available.

(b) Integration of Gas System Operation. Each Utility shall so operate its gas manufacturing, transmission, storage, distribution, and other facilities, and shall so interchange gas with other Utilities as to achieve as far as practicable maximum output in the area or areas in which a shortage exists or is imminent, and each Utility shall make such pooling arrangements as may be necessary to effectuate such purpose. Where necessary for such purpose, the Director of Industry Operations will, from time to time, issue specific directions as to the operation of gas manufacturing, transmission, storage, distribution, and other facilities, and as to deliveries of gas.

[fol. 16824] (c) Limitation on Deliveries of Natural or Mixed Natural and Manufactured Gas.

(i) In the event that the supply of natural or mixed natural and manufactured gas available in an area served by any Utility is insufficient to meet the demand therefore, and reduction in deliveries to Consumers becomes necessary, the Utility supplying such area shall reduce deliveries to its Consumers in the following manner and in accordance with such other specific directions as the Director of Industry Operations may from time to time issue:

(ii) First, the Utility shall, within the limits of its contractual rights, reduce deliveries to all dump or surplus Consumers, not engaged in war production, and deliveries to Consumers who have Standby Facilities, the operation of which can directly or indirectly reduce the total demand for natural or mixed natural and manufactured gas in the area.

(ii) Second, the Utility shall, to the extent necessary, operate all of its available gas manufacturing equipment so as to effect directly or indirectly the maximum increase in the supply of gas in the area.

(iii) Third, the Utility shall, without regard to its contractual rights or those of any Consumer, reduce deliveries to all other Consumers who have Standby Facilities to the extent that the operation of such facilities can directly or

indirectly alleviate the shortage of natural or mixed natural and manufactured gas in the area, and no such Consumer, after notification of the reduction in deliveries required shall accept deliveries of gas unless his Standby Facilities are being operated so as to effect the required reduction in his purchases of gas.

(iv) Fourth, the Utility shall, without regard to its contractual rights or those of any Consumer, reduce as far as practicable deliveries to Consumers in such manner as will cause the least interference with war production, and each Consumer who receives notification of the reduction in deliveries required shall reduce his acceptance of deliveries accordingly.

(2) Whenever any Utility finds it necessary to make any reduction in deliveries of gas to any Consumer in accordance with paragraphs (c) (1) (iii) and (c) (1) (iv) of this Order, it shall promptly notify the Consumer and at the same time give telegraphic notice thereof, to the Power Branch, War Production Board.

(3) Following each such shortage period, each affected Utility shall submit a detailed report of the quantities of gas conserved by the operation of Standby Facilities and the duration of curtailment and the extent to which each industrial Consumer was curtailed. Such report shall be filed on Form PD-283.

[fol. 16825] (4) Any Consumer who considers that any reduction in deliveries to him interferes materially with war production shall have the right to apply by telegram for relief to the Director of Industry Operations, who may grant such specific exemptions or take such other action as may be consistent with the purposes of this Order. Such application shall state the nature of the war materials being manufactured, the extent to which production has been curtailed because of reduced delivery of gas, and the increase in delivery of gas required for restoration of full production.

(5) No consumer shall be relieved of the requirements of section 944.2 or any other section of Priorities Regulation No. 1 Amended, by reason of the provisions of this paragraph (c).

(d) Restrictions upon Increased Deliveries to Non-residential Consumers. No Utility shall, after ten days following the effective date of this Order, deliver natural or mixed natural and manufactured gas to any new non-residential Consumer in the areas specified in Exhibit "A" annexed hereto, as the same may be amended from time to time, or increase deliveries of such gas to any existing non-residential Consumer in such areas for the operation of any new gas equipment, unless:

(1) Such new or existing non-residential Consumer shall have installed, prior to the date of the increase in deliveries, Standby Facilities of sufficient capacity to replace the new or increased deliveries of such gas during periods of shut-off, or

(2) Such new or existing non-residential Consumer cannot reasonably use any fuel other than gas, natural, or mixed natural and manufactured, because of technical utilization factors or process requirements.

(3) Such new delivery or increase in deliveries shall have been specifically approved in advance by the Director of Industry Operations. Any Consumer or Utility who considers that such deliveries are necessary for war production may apply for such approval to the Director of Industry Operations, who may grant such specific exemptions or take such other action as may be consistent with the purposes of this Order.

(e) Prohibition against Delivery to New Space Heating Installations.

(1) No Utility shall deliver and no Consumer shall accept delivery of natural gas or mixed natural and manufactured gas in the areas specified in Exhibit "A" annexed hereto, as the same may be amended or modified from time to time by the Director of Industry Operations, for either of the following purposes:

(i) For the operation of central space heating equipment (or heating equipment supplying the major portion of the heating requirements of the premises), unless such equipment was installed prior to March 1, 1942, or unless, in the case of new construction, the equipment was speci-

fied in the construction contract, and the foundation under [fol. 16826] the main part of the structure in which the equipment is to be installed was completed prior to March 1, 1942; or

(ii) For the operation of central space heating equipment (or heating equipment supplying the major portion of the heat requirements of the premises), which has been converted from other fuel to natural or mixed natural and manufactured gas unless such conversion has been completed prior to ten days after the effective date of this Order.

(2) Any Utility affected by the provisions of this paragraph (e) or any governmental agency which considers that supply of gas available on any particular system or portion thereof is adequate to take care of all existing and estimated future requirements of war industry, and unrestricted civilian use for the period ending April 1, 1944, may apply for exemption of the system or any portion thereof from the provisions of this paragraph to the Director of Industry Operations, who may grant such specific exemptions or take such other action as may be consistent with the purposes of this Order.

(f) Appeal. Any person affected by this Order who considers that compliance therewith would work an exceptional and unreasonable hardship on him may appeal for relief to the Director of Industry Operations who may grant such specific exemptions or take such other action as may be consistent with the purposes of this Order.

(g) Reports and Information

(1) Each Utility shall keep and preserve for not less than two years accurate and complete records concerning deliveries of natural gas to Consumers.

Such records shall be subject to inspection by duly authorized representatives of the War Production Board.

(2) All persons affected by this Order shall execute and file with the War Production Board such reports and questionnaires as said Board shall, from time to time, request.

(h) Communications to War Production Board. All reports required to be filed hereunder, and all communications concerning this Order, shall, unless otherwise directed, be addressed to:

"War Production Board

Washington, D. C. Ref.: L-31."

(i) Violations. Any person who wilfully violates any provisions of this Order, or any other order, direction or regulation, issued pursuant hereto, or who by any act or omission falsifies records to be kept or information to be furnished pursuant to this Order, may be prohibited from delivering or receiving gas, or any other material subject to allocation, and such further action may be taken as is deemed appropriate, including a recommendation for prosecution under Section 35(A) of the Criminal Code (18 U. S. C. 80).

[fol. 16827] (j) Effective Date. This Order shall take effect immediately and, unless sooner terminated, shall continue in full force and effect until April 1, 1943.

(P. D. Reg. 1 Amended, Dec. 23, 1941, 6 F. R. 6680; W. P. B. Reg. 1 Jan. 26, 1942, 7 F. R. 561; E. O. 9024, Jan. 16, 1942, 7 F. R. 329; E. O. 9040, Jan. 24, 1942, 7 F. R. 527; sec. 2(a), Public No. 671, 76th Congress, Third Session, as amended by Public No. 89, 77th Congress, First Session.)

Issued this 16th day of February, 1942.

J. S. KNOWLSON,
Director of Industry Operations.

[fol. 16828] Exhibit A.

Areas subject to prohibitions contained in paragraph (e) of Limitation Order L-31.

Alabama—(except the area served by the United Gas Pipe Line Company)

Arkansas—(only the area served by the Mississippi River Fuel Company).

California

District of Columbia

Georgia
Illinois
Indiana
Kentucky
Maryland

Missouri
New York
Ohio
Pennsylvania
Tennessee
Virginia
West Virginia

[fol. 16829] Advance Release: for Monday Morning Papers, February 16, 1942.

24033

War Production Board

WPB 230

The War Production Board today ordered a curtailment in the consumption of natural gas and mixed natural and manufactured gas.

The action was taken to assure adequate supplies of gas for war production. It was necessary because of increased gas requirements for both war production and civilian use, coupled with the scarcity of materials that would be required if existing systems were expanded.

Parts of the order (L-31) apply to the entire country. They do not become operative until a gas shortage occurs or becomes imminent in any area.

Other parts of the order apply only to 17 states and the District of Columbia, where the need for curtailment is greatest. They become effective by March 1 but do not

affect present uses of existing customers. That is, a consumer now using gas to cook or heat water is not restricted in such uses but he may not install a gas heating system in his home, store, or factory, or convert heating equipment now using other fuel to gas.

The order affects companies distributing natural gas or natural gas mixed with manufactured or artificial gas. It does not affect companies distributing only artificial or manufactured gas.

Gas companies operating in 17 states and the District of Columbia are ordered as follows:

1. They are prohibited from delivering gas for heating new homes, stores, factories or other buildings, unless the heating equipment is installed prior to March 1, 1942, or the equipment was specified in the construction contract and the foundation under the main part of the building is completed prior to March 1. This applies to a heating system intended to furnish all or the major part of the heat for a home or building. It does not apply to individual room heaters.

2. They are prohibited from delivering gas for the operation of heating equipment that has been converted from some other fuel to gas, unless such conversion is completed within 10 days after the issuance of the order.

Any utility or any governmental agency (such as a housing company) affected by this prohibition against new and converted installations, which considers that the available gas supply is adequate for all existing and estimated future war requirements as well as unrestricted civilian use until April 1, 1944, may apply to the Director of Industry Operations for exemption from this provision.

[fol. 16830] 3. They are prohibited from delivering gas to any new non-residential consumer or increasing delivery to any existing non-residential consumer, unless: (a) such new or existing consumer has installed standby facilities sufficient to replace the new or increased delivery during periods of shut-off; or (b) such new or existing consumer cannot reasonably use any fuel other than gas; or (c) approval shall have been granted in advance by the Director of Industry Operations for delivery to such new or existing

consumer. This provision becomes effective 10 days after the issuance of the order.

The areas subject to the prohibitions just listed are:

Alabama—(except the area served by the United Gas Pipe Line Co.)

Arkansas—(only the area served by the Mississippi River Fuel Co.)

California

District of Columbia

Georgia

Illinois

Indiana

Kentucky

Maryland

Michigan

Mississippi—(except the area served by the United Gas Pipe Line Co.)

Missouri

New York

Ohio

Pennsylvania

Tennessee

Virginia

West Virginia

Other provisions of the order apply to gas companies throughout the country. They become operative only if and when a shortage exists or becomes imminent.

These sections provide:

1. Each utility operating in an area where a shortage exists or is imminent is required, insofar as practical, to integrate its system with other systems, so as to obtain maximum supply of gas.

2. If and when the supply of gas becomes insufficient and reduction to consumers becomes necessary, and in the absence of specific directions by the Director of Industry Operations, the utility supplying such area is required to take the following steps, in the order given:

(a) Reduce deliveries to all dump or surplus consumers not engaged in war production. Dump or surplus consumers are consumers whose gas service is subject to interruption during shortage periods.

(b) Operate as much of its available gas manufacturing equipment as is necessary to relieve the shortage.

[fol. 16831] (c) Reduce deliveries to all firm gas consumers who have standby facilities.

(d) Reduce deliveries to other consumers in such manner as to cause the least interference with war production. All possible measures will be taken before interference with war production is permitted.

. . . . . .

[fol. 16834] (Order Enlarging Investigation and Making Illinois Natural Gas Company a Party Respondent.)

United States of America,

Federal Power Commission.

Commissioners) Leland Olds, Chairman, Claude L.) Draper, Basil Manly, John W. Scott) and Clyde L. Seavey.

March 26, 1942.

In the Matter of

City of Detroit, Michigan,

and

County of Wayne, Michigan,

Docket No. G-200. vs.

Panhandle Eastern Pipe Line Company

and

Michigan Gas Transmission Corporation

In the Matter of

Panhandle Eastern Pipe Line Company

and

Michigan Gas Transmission Corporation.

Docket No. G-207.

It appearing to the Commission that:

(a) By order of May 22, 1941, the Commission instituted an investigation in Docket No. G-207, of Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Corporation for the purpose of enabling the Commission to determine with respect to each of said companies (1) whether it is a natural-gas company within the meaning of the Natural Gas Act, and (2) whether in connection with any transportation or sale of natural gas subject to the jurisdiction of this Commission, any rates, charges, or classifications demanded, observed, charged, or collected, or any rules, regulations, practices, or contracts affecting such rates, charges, or classifications, are unjust, unreasonable, unduly discriminatory, or preferential;

(b) By order of September 2, 1941, the Commission directed that said proceeding in Docket No. G-207 be consolidated with the complaint proceeding in Docket No. G-200 for the purposes of hearing thereon;

(c) Hearings in the proceeding designated Docket No. G-200 were commenced on July 15, 1941, and hearings in the said consolidated proceedings are now in progress;

[fol. 16835] (d) During said hearings, Panhandle Eastern Pipe Line Company presented evidence showing that its wholly owned subsidiary, Illinois Natural Gas Company, an Illinois corporation, purchases natural gas from Panhandle Eastern Pipe Line Company at several points of delivery in the State of Illinois, and transports said gas in interstate commerce and resells such gas to certain distributing companies located in the State of Illinois which, in turn, resell said gas for ultimate public consumption for domestic, commercial, and industrial use;

(e) The evidence adduced in the hearings respecting the revenues, expenses, costs, return and other data relating to Panhandle Eastern Pipe Line Company has been presented on a consolidated basis for both Panhandle Eastern Pipe Line Company and Illinois Natural Gas Company;

(f) Counsel for Panhandle Eastern Pipe Line Company have stated on the record that Illinois Natural Gas Company is "an operating department or arm of the Panhandle Eastern Pipe Line Company" and that they "are disregarding the separate corporate entity of these two companies in this investigation";

(g) The Supreme Court of the United States, in the October Term, 1941, has held (Illinois Natural Gas Company vs. Central Illinois Public Service Company and Illinois Commerce Commission, opinion dated January 5, 1942) that said Illinois Natural Gas Company engages in interstate commerce in the purchase and sale of natural gas and is a natural-gas company within the meaning of the Natural Gas Act;

(h) The rates, charges, classifications, rules, regulations, practices, or contracts, of Illinois Natural Gas Company, subject to the jurisdiction of this Commission, may be unjust, unreasonable, unduly discriminatory, or preferential;

The Commission orders that:

(A) The investigation instituted by the Commission's order of May 22, 1941, is hereby enlarged to include an investigation of the Illinois Natural Gas Company for the purpose of enabling the Commission:

(1) To determine with respect to said Company whether in connection with any transportation or sale of natural gas subject to the jurisdiction of this Commission, any rates, charges, or classifications demanded, observed, charged, or collected, or any rules, regulations, practices, or contracts affecting such rates, charges, or classifications, are unjust, unreasonable, unduly discriminatory, or preferential; and

[fol. 16836] (2) If the Commission, after hearing has been had, shall find that any of said Company's rates,

charges, classifications, rules, regulations, practices, or contracts, subject to the jurisdiction of this Commission, are unjust, unreasonable, unduly discriminatory, or preferential, to determine and fix by appropriate order or orders, just and reasonable rates, charges, classifications, rules, regulations, practices, or contracts to be thereafter observed and in force;

(B) Illinois Natural Gas Company be and it is hereby made a party respondent to the proceeding designated Docket No. G-207.

By the Commission.

LEON M. FUQUAY,
Secretary.

[fol. 16839] (Motion of Counsel for Federal Power Commission for Immediate Order Fixing Just and Reasonable Rates.)

(Docketed April 27, 1942, Federal Power Commission.)

City of Detroit, Michigan and County of Wayne, Michigan, Docket No. G-200 100-2. vs.
Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Corporation.

In the Matter of

Panhandle Eastern Pipe Line Company, Michigan Gas Transmission Corporation and Illinois Natural Gas Company:

Docket No. G-207.

Comes now Harry S. Littman, Counsel, for the Federal Power Commission, in the above-entitled cause, who respectfully represents that:

1. On February 28, 1941, a petition was filed by the City of Detroit and the County of Wayne, Michigan, in Docket No. G-200, alleging, among other matters, that Panhandle Eastern Pipe Line Company[1] sells natural gas to

[1]Hereinafter sometimes referred to as "Panhandle Eastern".

the Michigan Consolidated Gas Company for resale in the City of Detroit and County of Wayne, Michigan; that such gas is produced in the States of Texas and Kansas and is transported to a point of delivery near the City of Detroit; that such gas is transported from a point on the Indiana-Illinois boundary line to a point at or near the City of Detroit by Michigan Gas Transmission Corporation[2] for the account of Panhandle Eastern, for which transportation Panhandle Eastern pays its affiliate, Michigan Gas, an excessive rate or charge; that the rates and charges demanded and collected by Panhandle Eastern from Michigan Con- [fol. 16840] solidated Gas Company are unjust, unreasonable, and unduly discriminatory; and praying that the Commission, after investigation, fix and determine the just and reasonable rates to be thereafter observed and in force in respect of such transportation and sale of natural gas for resale in said City and County.

2. On March 28, 1941, Michigan Gas filed an answer denying that any of its charges in connection with the sale or delivery of gas to Michigan Consolidated Gas Company are excessive, unjust or unreasonable; and on April 3, 1941, Panhandle Eastern filed an answer to the said petition denying that its rates are unjust, unreasonable or discriminatory.

3. By order of May 22, 1941, the Commission on its own motion instituted an investigation, in Docket No. G-207, for the purpose of enabling the Commission to determine whether, in connection with any transportation or sale of natural gas subject to the jurisdiction of the Commission, the rates and charges of Panhandle Eastern and Michigan Gas are unjust, unreasonable, unduly discriminatory, or preferential, and, if so, to fix by appropriate order or orders just and reasonable rates or charges.

4. By order of June 10, 1941, the Commission permitted the Michigan Public Service Commission to become an intervener in the complaint proceeding designated Docket No. G-200; and by order of July 12, 1941, the Commission permitted Michigan Consolidated Gas Company to become an intervener and a party to said proceeding.

---

[2]Hereinafter sometimes referred to as "Michigan Gas".

5. On September 2, 1941, the Commission directed that the proceeding in Docket No. G-207 be consolidated with the complaint proceeding in Docket No. G-200 for purposes of hearing.

6. On March 26, 1942, the Commission ordered that the investigation, instituted by the Commission's order of May [fol. 16841] 22, 1941, be enlarged to include an investigation of the rates and charges of Illinois Natural Gas Company[1], a wholly-owned subsidiary of Panhandle Eastern, and making said Illinois Natural Gas Company a party respondent to the proceeding designated Docket No. G-207.

7. Hearings were commenced on July 15, 1941, and have continued for approximately 84 days during which a total of approximately 10,700 pages of testimony has been adduced and 27 witnesses have appeared who offered approximately 260 exhibits.

8. From a consideration of all the evidence it appears that:

I. Rate Base

(a) The cost of plant, as claimed by the respondents, at December 31, 1941, is $82,952,156.82, as follows:

Claimed Cost of Plant[2]

Panhandle Eastern	$66,541,913
Illinois Natural	3,108,120
Michigan Gas	12,664,841
Indiana Gas	197,957
Pipe Line Purchased	439,326
Total (Exh. 194)	$82,952,157

(b) Included in the said claimed cost of plant is the amount of $2,910,734 of construction work in progress, which should properly be deducted from said total claimed cost in arriving at the original cost of plant in service at December 31, 1941.

[fol. 16842] (c) Included in the said claimed cost of plant of Panhandle Eastern is the purported unamortized cost

[1]Sometimes hereinafter referred to as "Illinois Natural".

[2]Giving effect to financing transactions consummated on February 6, 1942 and the acquisition on that date of capital stock and debt of Michigan Gas Transmission Corporation and Indiana Gas Distribution Corporation (herein sometimes referred to as "Indiana Gas") and purchase of a pipe line of Ohio Fuel Gas Company.

of "Gas Sales and Purchase Contracts" in the amount of $1,172,115; and the evidence shows that the said sum of $1,172,115 does not represent actual cost but it is in fact a write-up and should properly be eliminated from the said claimed cost of plant in arriving at original cost of plant in service at December 31, 1941.

(d) Included in the said claimed cost of plant are "Contributions in Aid of Construction" totaling $55,016, which should properly be deducted in arriving at the original cost of plant in service as of December 31, 1941.

(e) The original cost of plant in service at December 31, 1941, reflecting the deductions and eliminations set forth in paragraphs (b), (c) and (d) above, is not more than $78,814,292, as here shown:

Cost of Plant in Service

Panhandle Eastern	$62,665,568
Illinois Natural	2,871,194
Michigan Gas	12,643,847
Indiana Gas	194,357
	78,374,966
Pipe Line Purchased from Ohio Fuel Gas Co. subsequent to December 31, 1941	439,326
Total	$78,814,292

(f) The respondents[1] have accumulated reserves for depreciation, depletion and amortization, as of December 31, 1941, in the amount of $12,596,987, as follows (Exh. 194):

[fol. 16843] Reserves for Depreciation, Depletion and Amortization.

Panhandle Eastern	$10,405,047
Illinois Natural	502,976
Michigan Gas	1,661,966
Indiana Gas	26,998
Total	$12,596,987

[1]Panhandle Eastern, Michigan Gas and Illinois Natural are hereinafter sometimes referred to collectively as "respondents".

The evidence shows that the said reserves, totaling $12,596,987 represent the accrued depreciation, depletion and amortization of the plant in service, as of December 31, 1941; and the said amount is deducted from the aforesaid cost of plant to arrive at the rate base for purposes of this motion.

(g) The evidence shows that the allowable working capital is not in excess of $920,000, as follows:

Working Capital

Panhandle Eastern	$726,000
Illinois Natural	17,000
Michigan Gas	173,000
Indiana Gas	4,000
Total (Exh. 221)	$920,000

(h) Based upon paragraph (a) to (g) above, the rate base, i. e., original cost, less accrued depreciation, plus working capital, is not in excess of $67,137,305, as here shown:

Rate Base

Cost of Gas Plant in Service at December 31, 1941	$78,814,292
Less: Depreciation Reserves	12,596,987
Net Original Cost	$66,217,305
Working Capital	920,000
Rate Base	$67,137,305

[fol. 16844] II. Gross Operating Revenue

The consolidated gross operating revenue of the respondents for the year 1941 amounted to $17,789,573 (Exh. 195).

III. Operating Expenses

(a) The consolidated operating expenses, as shown by the respondents' exhibits, for the year 1941, were as follows:

Operation and Maintenance	$2,648,694
Gas Purchased[1]	1,180,918
Depreciation, Depletion and Amortization	2,473,383
Amortization—Gas Contracts	332,143
Taxes—Federal Income[2]	2,063,175
Taxes—Federal Excess Profits	1,677,054
Taxes—Property and Miscl.	901,387
Total (Exh. 195)	$11,276,754

(b) Included in said operating expenses is the sum of $293,029 charged annually for the purpose of amortizing "Gas Sales and Purchase Contracts"; the evidence shows that the purported unamortized cost of such contracts in the amount of $1,172,115, as of December 31, 1941, does not represent actual cost but is in fact a write up; and the said expense of $293,029 should be eliminated from operating expense.

(c) Said total operating expenses include the sum of $6,000 charged for rate case expense, which amount should be eliminated from operating expenses for purposes of this proceeding.

[fol. 16845] (d) The Federal income taxes should be reduced from $2,063,175 to $942,951, and the Federal excess profits taxes should be entirely eliminated in order to reflect the tax savings due to the indicated reduction in gross revenue hereinafter shown.

(e) The sum of the deductions set forth in paragraphs (b), (c) and (d) above total $3,096,307, leaving $8,180,447 as the maximum allowable operating expenses, as follows:

Operation and Maintenance	$2,642,694
Gas Purchased	1,180,918
Depreciation, Depletion and Amortization	2,473,383
Amortization—Gas Contracts	39,114
Taxes—Federal Income	942,951
Taxes—Property and Miscl.	901,387
Total (as adjusted)	$8,180,447

[1]Inter-company gas purchases eliminated.

[2]Includes charges in lieu of Federal Income and Excess Profits Taxes in the amount of $823,881. Does not include pro-forma adjustments.

IV. Return

(a) The amount available for return after operating expenses and taxes, as adjusted in III, above, is $9,609,126, as follows:

Gross Operating Revenue	$17,789,573
Operating Expenses (as adjusted)	8,180,447
Net Operating Revenue	$ 9,609,126

(b) A fair rate of return for respondents is not more than 6 per cent, or $4,028,238 upon the rate base of $67,137,305.

(c) The gross revenue of respondents, therefore, exceeds a fair return by not less than $5,580,888 as follows:

Net Operating Revenue	$9,609,126
Return at 6%	4,028,238
Excess of Revenue Above 6% Return	$5,580,888

[fol. 16846] (d) During the five years 1937 to 1941, inclusive, Panhandle Eastern and subsidiary companies earned an average return of not less than 10.64% on their average net investment in plant of $53,997,936 (Exh. 222-A).

(e) During the period March 1, 1936, to December 31, 1941, Michigan Gas earned an average return of not less than 8½% on its average net investment in plant of $9,134,568 (Exh. 232).

9. The evidence now clearly establishes that the present rates charged and collected by the respondents are unjust and unreasonable.

10. The respondents have had a full and complete hearing; and counsel for the respondents have stated that their case on direct had been completed (T. 10651).

11. In order to aid the regulatory agencies in the States of Michigan, Ohio, Indiana, Illinois, Missouri and Kansas in fixing fair and reasonable rates for gas sold to ultimate consumers in said States, it is necessary that an immediate order be entered reducing the rates and charges of the respondents.

12. Nothing herein contained is to be taken as an admission of the accuracy or propriety of any of the claims made by the respondents or their witnesses.

Wherefore, Commission Counsel prays that the Commission enter an immediate interim order fixing just and reasonable rates for gas sold and transported by the respondents, Panhandle Eastern Pipe Line Company, Illi-
[fol. 16847] nois Natural Gas Company and Michigan Gas Transmission Corporation.

HARRY S. LITTMAN,
Counsel for Federal Power Commission.

[fol. 16848] Certificate of Service.

I hereby certify that today I have served copies of the attached motion on all parties to this proceeding by personally serving such copies on their respective counsel of record.

Dated: Washington, D. C. This 23rd day of April, 1942.

HARRY S. LITTMANN.

[fol. 16849] (Motion of Michigan Consolidated Gas Company for immediate Order reducing Rates.)

Before the
Federal Power Commission.

Docket No. G-200. Docket No. G-207

City of Detroit and County of Wayne, Municipal Corporations, Complainants,

vs.

Panhandle Eastern Pipe Line Company, and Michigan Gas Transmission Corporation, Defendants.

Michigan Consolidated Gas Company, Intervenor.

To the Honorable Members of the Federal Power Commission:

Comes now Michigan Consolidated Gas Company, intervenor in the above-entitled matter and moves the Commission to enter an interim order at this time finding that the rates and charges now made by Panhandle Eastern

[fol. 16850] Pipe Line Company and Michigan Gas Transmission Corporation are unreasonable and excessive and that as a result thereof these corporations, now in common ownership and management, are receiving and collecting annually the sum of not less than five million dollars in excess of the amount of a fair return; that said rates and charges as presently filed and maintained are unjustly discriminatory as against the intervenor and its customers in the Detroit area, as well as with respect to the various classes of service rendered and the localities in which they are rendered; and that by reason thereof the intervenor and the gas consumers to whom it distributes natural gas are suffering undue discrimination, prejudice and disadvantage; and ordering that the said Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Corporation immediately file with the Commission rate schedules under which the gross revenues to be derived by them from the transportation and sale of natural gas for resale for public consumption (other than that sold for industrial use, directly as well as indirectly under special industrial contracts) be reduced by the amount of five million dollars per year, in which said schedules the rates for natural gas delivered to intervenor for resale and distribution be made uniform with all others, or in any event not higher than the average rate charged by respondents for similar service to all others.

As grounds for such finding and the entry of the order as above requested, intervenor states that the uncontradicted evidence introduced and received in these proceedings, up to and including this date, including the evidence introduced by respondents, viewed and construed in its most favorable light to such respondents, establishes the fact that the respondents are each maintaining rates and charges for the sale of natural gas for resale for ultimate public consumption which are excessive, unreasonable, unjust and unduly discriminatory and that intervenor and [fol 16851] all of its natural gas consumers are suffering undue prejudice and disadvantage thereby, and that the gross revenues now being collected by these respondents under their rate schedules now in force for such natural gas service are more than five million dollars per annum in excess of the amount of a just and fair return for such

service. Such undisputed evidence further conclusively establishes that the rate schedules now in force covering natural gas sold and delivered to intervenor for resale in its area of distribution are unduly discriminatory, based upon the rates charged others both in respect to the class of services rendered and as to localities.

Intervenor has in course of preparation studies containing statistical data and accounting analyses and will on or before Tuesday, April 28, 1942, file with the Commission by way of a supplement hereto, such studies, data and analyses with necessary descriptive text and personally serve upon counsel on that date (or by mailing not later than Monday, April 27, 1942).

Dated this 23rd day of April, 1942.

Respectfully submitted,
MICHIGAN CONSOLIDATED GAS COMPANY,

[fol. 16853] (Motion of City of Detroit and County of Wayne for immediate order reducing Rates.)

The City of Detroit, and the County of Wayne, complainants jointly, move that this commission make and enter an order forthwith finding and declaring that the existing rates and divisions thereof maintained by the defendant companies affecting the rates applicable to customers in the district or territory of complainants purchasing natural gas for resale for ultimate public consumption, be held and declared to be unjust and unreasonable, and altering and fixing the just and reasonable rates, charges, classifications, rules, regulations or contracts to be observed and in

force to said customers, and determining and fixing such other rates, charges, classifications, rules, regulations or [fol. 16854] contracts to be observed by defendants as are involved in or incidental thereto.

The grounds of this motion are as follows:

1. The parties hereto are about to complete and conclude a full hearing upon all the issues in controversy; adequate evidence has been adduced for the determination of all substantial issues, from which it appears that the existing rates affecting the interest of complainants are very greatly in excess of just and reasonable rates, and, as such, are unlawful, and from which just and reasonable rates may be fixed forthwith pending such further investigation as may be made by the commission.

2. The average property in service in 1941, allowing $750,000 for working capital and current assets, was $78,555,077. It is conceded by the company's president that the gas fields will last for thirty more years at an average annual withdrawal of 80 billions cubic feet. The enterprise has been in operation for over nine years and its principal market, the Detroit district, has been served five and one-half years. The annual requirement to yield 6% upon the unamortized cost as the same declines, and to provide amortization or depreciation upon a thirty-five year life basis is 6.9% of cost. The effect of a somewhat shorter or a somewhat longer general service life is insignificant; thus the requirement for return and depreciation to yield 6% on declining value, cost basis, is 7%; on a thirty-three year life basis.

Exhibit A hereto attached indicates a calculated requirement for return and depreciation of $5,492,548, to afford a return of 6%. This is 7% of plant cost and working capi- [fol. 16855] tal. The reasonable requirement for return is a rate of 6%, and based upon present value, cost basis, amounts to $4,322,825.

The requirement for depreciation and replacements does not exceed $1,169,723.

The requirement for Federal income tax upon an income of $4,322,825 in consideration of the deductions avail-

able for tax purposes of depreciation and interest paid does not exceed $765,547.

The operating income before Federal taxes and depreciation is $13,058,574; and this realization against a requirement for depreciation and Federal income taxes makes available for rate reduction at least $6,800,479.

The above facts are set forth in further tabulated detail in Exhibit A hereto attached and made a part hereof.

Ample evidence has been presented to establish said facts and to determine all reasonable controverted issues in respect thereto.

The rate reductions in prospect amount to $18,800 per day. In view of the magnitude thereof and the clarity with which the evidence indicates that such reductions are available they should not be deferred for further investigation and research, the probable effect of which would be to enhance them.

3. A hearing is pending before the Michigan Public Service Commission designed to enforce the maximum rate reduction to consumers in the Detroit district, resale customers of Michigan Consolidated Gas Company, and including the object of requiring any reductions obtained in [fol. 16856] this proceeding to be made immediately available to such customers. Said hearing is continued pending the order of the Federal Power Commission in the premises.

WILLIAM E. DOWLING,
Prosecuting Attorney-Wayne County, Michigan.

HAROLD GOODMAN,
Special Assistant Prosecuting Attorney.

PAUL E. KRAUSE,
Corporation Counsel-City of Detroit.

JAMES H. LEE,
Assistant Corporation Counsel.

[fol. [6857]

Exhibit A

Available Rate Reduction
Panhandle Eastern Pipe Line Company
1941

1	Cost of gas plant (excluding construction in progress and unamortized portion of $2,930,000 gas sales and purchase contracts) Average during year	—	$77,805,077
2	Accrued depreciation	—	6,507,994
3	Value of average plant	—	71,297,083
4	Materials, supplies, and working capital	—	750,000
5	Property in service	—	72,047,083
6	6% Return requirement	—	4,322,825
7	Federal income tax requirement	—	765,547
8	Requirement for depreciation and retirement	—	1,169,723
9	Total lines 6, 7 and 8	—	6,258,095
10	Available for depreciation, Federal income taxes and profit (Ex.196)	—	13,058,574
11	Available for rate reduction	—	6,800,479

1. Based upon approximation equivalent to expiration of 9 1/2 years of 35 year life and consideration of salvages as follows:

(Ex. 66A)	Panhandle E. Gas Co.	8,261,258
(Ex. 86)	Mich. Gas Trans. adjusted to 15% on mains and 5% on compressor sta. eq.	1,791,029

In view of a future life expectancy of 30 years, at an output of 80 billion cu. ft. per year (Creveling Ex. 218) and the fact that some items may be retired in advance of others, both the accrued depreciation and the present re- [fol. 16858] quirement are approximated as substantially equivalent to a property having a thirty-five year life of which eight and one-half years have expired. The overall effect of this approximation is to allow rates more liberal to the company than closer calculation will justify. The current annual allowance is increased by $200,000 as an excessively liberal allowance for replacement in view of Ex. 193.

[fol. 16859] State of Michigan,
County of Wayne.—ss.

Harold Goodman, being duly sworn, deposes and says that he prepared the foregoing motion by him subscribed and knows the contents thereof, and that the same are true according to his best knowledge and belief.

HAROLD GOODMAN.

Subscribed and sworn to before me this 20th day of April, 1942.

(Seal) BEATRICE BROWN,
Notary Public Wayne County, Michigan.

My commission expires May 21, 1944.

[fol. 16860] (Amendment to Motion of Michigan Consolidated Gas Company for Order reducing Rates.)

(Received April 28, 1942, Federal Power Commission.)

To the Honorable Members of the Federal Power Commission:

Michigan Consolidated Gas Company, by leave of the trial examiner and consent of counsel for the parties hereto (Transcript p. 40752), amends and supplements its motion for an interim order finding the present rates and charges of Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Corporation to be unreason-
[fol. 16861] able, excessive and unduly discriminatory as follows:

It attaches hereto a series of studies containing statistical data and accounting analyses based upon evidence and exhibits filed in the hearings in Dockets G-200 and G-207, together with those facts readily and indisputably deducible therefrom, which conclusively show that the rates and charges of the respondents are excessive and unreasonable in that they produce for respondents an aggregate amount of gross revenue not less than $5,489,874.00 per annum in excess of the amount necessary to provide a fair return.

It states that in the preparation of these studies and analyses it has acted upon and used the evidence offered by the respondents themselves, and such other evidence received as remains uncontradicted. It does not concede

the correctness of the facts, theories, philosophy or conclusions of the witnesses and the exhibits presented by respondents but, for purposes of this motion, attempts to interpret them in the most favorable light to respondents. It has used the evidence and exhibits tendered by respondents and, with such few adjustments as are noted, necessary to square with reality, it has determined the minimum reduction in rates and charges required to reduce the gross revenues of respondents to a point which will eliminate the excess return. These studies and analyses are not offered as reflecting the reduction which would be necessary should it be deemed appropriate to reduce the return to a point [fol. 16862] barely above confiscation, nor has it included in its computation many pertinent factors, other than those noted, which upon a complete accounting study would undoubtedly necessitate further substantial reductions.

As a typical illustration intervenor uses, in the first instance, in its computations the sum of $681,680.82 which the witness Biddison testified would be a necessary annual operating expense throughout the life of the enterprise to provide for replacements (Ex. 68-A) to reflect the method proposed by respondents for providing amortization, depreciation and depletion of their plants and properties, in the most favorable light to respondents. Evidence in the record shows it to have been excessive beyond reason with respect to transmission mains and compressor station equipment, and a later adjustment is made in these studies which brings the estimate somewhere within the realm of reality.

The test is made from the standpoint of two separate corporate entities (natural gas utilities) as they existed at the time of the initiation of this inquiry. The fair return to which each is entitled is measured by a fair and reasonable charge against the public for the operation and use of property in public service. Changes in intercorporate relationship or in the ownership of property dedicated to public service add nothing to the value of that service. No recognition is given to the claim that the cost of utility service to the public can be increased because of increased income taxes incurred by a utility in its own interest,

[fol. 16863] wholly unrelated to the cost of performing utility service. On the contrary there has been omitted for lack of proper figures the economies publicly prophesied and admittedly possible through joint operation of the two utilities.

The sum of the two returns indicated would be a maximum return for the joint properties and it is obvious that if the properties are to be treated separately and the rate schedules to be filed by Panhandle Eastern Pipe Line Company give a lessened cost of operation to Michigan Gas Transmission Corporation, the excess return of that company as herein shown would be increased by the amount of such lessened operating expense.

Since the volume of unregulated business (direct industrial sales) is insignificant, and the evidence conclusively shows that respondent Panhandle Eastern Pipe Line Company has at all times maintained and constructed full capacity for the transportation of such direct industrial sales and contemplates continuance of construction to provide the capacity for future sales (Exhibits 40 and 47), any allocation has been disregarded and could avail respondents nothing. And since a new schedule of rates, inevitable under the record, may eliminate the discrimination in present rates and charges, such studies will be left to the brief.

Dated this 27th day of April, 1942.

[fol. 16864] Respectfully submitted,

MICHIGAN CONSOLIDATED GAS COMPANY.

[fol. 16880] Certificate of Service

I hereby certify that I have this day mailed, postage prepaid, to the respective counsel for each of the parties to this proceeding copies of the amended motion of Michigan Consolidated Gas Company for an interim order reducing rates.

Dated at Washington, D. C., this 27th day of April, 1942.

PARK CHAMBERLAIN,
Counsel for Michigan Consolidated Gas Company.

[fol. 16881] (Stipulation of Counsel for various Parties and Federal Power Commission Counsel consenting to withdrawal of Federal Power Commission Counsel's Motion for Immediate Order reducing Rates, etc.)

(Received May 7, 1942, Federal Power Commission.)

(Docketed May 11, 1942, Federal Power Commission.)

City of Detroit, Michigan
and
County of Wayne, Michigan
vs.
Panhandle Eastern Pipe Line Company
and
Michigan Gas Transmission Corporation

Docket No. G-200.—100-2

Formal

In the Matter of

Panhandle Eastern Pipe Line Company
Michigan Gas Transmission Corporation
and
Illinois Natural Gas Company

Docket No. G-207

It is hereby stipulated by and between counsel for the respective parties to the above-entitled proceedings that Commission counsel's motion for an immediate order reducing rates, filed with the Trial Examiner during the hearing on April 23, 1942, and copied in the transcript of

the proceedings at pages 10753 to 10764, may be withdrawn and that Commission counsel may file in substitution therefor the motion for an immediate order reducing rates, a copy of which is hereto attached.

It is understood that the execution of this stipulation by and on behalf of Respondents shall not indicate or be deemed to indicate approval of the merits of the motion or the proposed changes therein, or approval or assent to any allegation or assertion contained in said motion, or to the validity of any such allegation; and, in particular, it is understood that the execution of this stipulation by and on behalf of Respondents is being made at the request of counsel for the Commission, and does not constitute and may not be deemed to constitute a waiver of any of the rights of said Respondents, or any of them, whether under such contention as they may make of denial to them of due process of law in these proceedings, or otherwise.

CARL J. WHEAT,
Counsel for
PANHANDLE EASTERN PIPE LINE COMPANY,

MICHIGAN GAS TRANSMISSION CORPORATION,

ILLINOIS NATURAL GAS COMPANY

HARRY S. LITTMAN,
Counsel for
FEDERAL POWER COMMISSION.

JAMES H. LEE,
Counsel for
CITY OF DETROIT, MICHIGAN

HAROLD GOODMAN,
Counsel for
COUNTY OF WAYNE, MICHIGAN

PARK CHAMBERLAIN,
Counsel for
MICHIGAN CONSOLIDATED GAS COMPANY.

[fol. 16882] (Motion of Counsel for Federal Power Commission for Immediate Order reducing Rates.)

Comes now Harry S. Littman, Counsel, for the Federal Power Commission, in the above-entitled cause, who respectfully represents that:

1. On February 28, 1941, a petition was filed by the City of Detroit and the County of Wayne, Michigan, in Docket No. G-200, alleging, among other matters, that Panhandle Eastern Pipe Line Company[1] sells natural gas to the Michigan Consolidated Gas Company for resale in the City of Detroit and County of Wayne, Michigan; that such gas is produced in the States of Texas and Kansas and is transported to a point of delivery near the City of Detroit; that such gas is transported from a point on the Indiana-Illinois boundary line to a point at or near the City of Detroit by Michigan Gas Transmission Corporation for the account of Panhandle Eastern, for which transportation Panhandle Eastern pays its affiliate, Michigan Gas, an excessive rate or charge; that the rates and charges demanded and collected by Panhandle Eastern from Michigan Consolidated Gas Company are unjust, [fol. 16883] unreasonable, and unduly discriminatory; and praying that the Commission, after investigation, fix and determine the just and reasonable rates to be thereafter observed and in force in respect of such transportation and sale of natural gas for resale in said City and County.

2. On March 28, 1941, Michigan Gas filed an answer denying that any of its charges in connection with the sale or delivery of gas to Michigan Consolidated Gas Company are excessive, unjust or unreasonable; and on April 3, 1941, Panhandle Eastern filed an answer to the said petition denying that its rates are unjust, unreasonable or discriminatory.

3. By order of May 22, 1941, the Commission on its own motion instituted an investigation, in Docket No. G-207, for the purpose of enabling the Commission to determine whether, in connection with any transportation or sale of

[1] Hereinafter sometimes referred to as "Panhandle Eastern".

[2] Hereinafter sometimes referred to as "Michigan Gas".

natural gas subject to the jurisdiction of the Commission, the rates and charges of Panhandle Eastern and Michigan Gas are unjust, unreasonable, unduly discriminatory, or preferential, and, if so, to fix by appropriate order or orders just and reasonable rates or charges.

4. By order of June 10, 1941, the Commission permitted the Michigan Public Service Commission to become an intervener in the complaint proceeding designated Docket No. G-200; and by order of July 12, 1941, the Commission permitted Michigan Consolidated Gas Company to become an intervener and a party to said proceeding.

5. On September 2, 1941, the Commission directed that the proceeding in Docket No. G-207 be consolidated with the complaint proceeding in Docket No. G-200 for purposes of hearing.

6. On March 26, 1942, the Commission ordered that the investigation, instituted by the Commission's order of [fol. 1688] May 22, 1941, be enlarged to include an investigation of the rates and charges of Illinois Natural Gas Company[1], a wholly-owned subsidiary of Panhandle Eastern, and making said Illinois Natural Gas Company a party respondent to the proceeding designated Docket No. G-207.

7. Hearings were commenced on July 15, 1941, and have continued for approximately 84 days during which a total of approximately 10,000 pages of testimony has been taken; one witness appeared for the petitioners who introduced approximately 15 exhibits, 21 witnesses appeared for the respondents[2] who introduced approximately 186 exhibits, and 4 witnesses appeared for the Commission who introduced approximately 30 exhibits; intervener Michigan Consolidated Gas Company introduced 9 exhibits; all of said witnesses were either cross-examined or were tendered for cross-examination, and full and complete opportunity has been given to the respondents to cross-examine all wit-

[1] Sometimes hereinafter referred to as "Illinois Natural".

[2] Panhandle Eastern, Michigan Gas, and Illinois Natural are hereinafter sometimes referred to collectively as "respondents".

nesses offered by the petitioners and the Commission; and full and complete opportunity has been afforded to the respondents to present testimony and to rebut the testimony offered by the petitioners and the Commission.

8. The respondents have introduced evidence with respect to book cost and original cost of plant, "going concern value", capital additions, working capital, depreciation, gas reserves, revenues, expenses, allocation, operations, rate of return and other matters alleged to relate to the issue of the reasonableness of their rates, and have presented a complete case in attempted justification of the said rates; the petitioners also presented evidence on certain similar subjects; Commission counsel, introduced evidence relating to a write-up in the book cost of plant accounts, historical earnings on average net investment, [fol. 16885] working capital, depreciation and, allocation rate of return; the evidence now contained in the record, which includes the respondents' entire presentation on direct covering all elements allegedly relating to the issue of reasonableness of the existing rates, is sufficient and complete in establishing that the present rates charged and collected by the respondents are unjust and unreasonable (as hereinafter shown) and should be immediately reduced before the taking of further testimony of the Commission's witnesses.

9. At page 10651 of the transcript of the proceedings, counsel for the respondents stated that they had concluded the presentation which they desired to make; at page 10772 of the transcript of the proceedings, at the conclusion of all the evidence now contained in the record, respondents' counsel stated that they had no further testimony to offer; at page 10773 of the transcript of the proceedings respondents' counsel stated "We will not make the contention that we have not had an opportunity to put on additional testimony here if we had so desired"; and the respondents have had in every respect a full, fair and complete hearing.

10. From a consideration of all the evidence it appears that:

I. Rate Base

(a) The book cost of plant, as claimed by the respondents, at December 31, 1941, is $82,952,156.82, as follows:

Claimed Book Cost of Plant[1]

Panhandle Eastern	$66,541,913
Illinois Natural	3,108,120
Michigan Gas	12,664,841
Indiana Gas	197,957
Pipe Line Purchased	439,326
Total (Exh. 194)	$82,952,157

[fol. 16886] Respondents' claim that the investment in properties as shown on their books substantially represents the original cost of said properties (T. 926-927; Exh. 91).

(b) Included in the said claimed cost of plant is the amount of $2,910,734 of construction work in progress, which should properly be deducted from said total claimed cost in arriving at the original cost of plant in service at December 31, 1941.

(c) Included in the said claimed cost of plant of Panhandle Eastern is the purported unamortized cost of "Gas Sales and Purchase Contracts" in the amount of $1,172,115; and the evidence shows that the said sum of $1,172,115 does not represent actual cost but it is in fact a write-up and should properly be eliminated from the said claimed cost of plant in arriving at original cost of plant in service at December 31, 1941.

(d) Included in the said claimed cost of plant are "Contributions in Aid of Construction", totaling $55,016, which should properly be deducted in arriving at the original cost of plant in service as of December 31, 1941.

(e) The original cost of plant in service at December 31, 1941, reflecting the deductions and eliminations set

[1] Giving effect to financing transactions consummated on February 6, 1942 and the acquisition on that date of capital stock and debt of Michigan Gas Transmission Corporation and Indiana Gas Distribution Corporation (herein sometimes referred to as "Indiana Gas") and purchase of a pipe line of Ohio Fuel Gas Company.

forth in paragraphs (b), (c) and (d) above, is not more than $78,814,292, as here shown:

Cost of Plant in Service	
Panhandle Eastern	$62,665,568
Illinois Natural	2,871,194
Michigan Gas	12,643,847
Indiana Gas	194,357
	$78,374,966
Pipe Line Purchased from Ohio Fuel Gas Co. subsequent to December 31, 1941	439,326
Total	$78,814,292

[fol. 16887] (f) The respondents have accumulated reserves for depreciation, depletion and amortization, as of December 31, 1941, in the amount of $12,596,987, as follows (Exh. 194):

	Reserves for Depreciation, Depletion and Amortization
Panhandle Eastern	$10,405,047
Illinois Natural	502,976
Michigan Gas	1,661,966
Indiana Gas	26,998
Total	$12,596,987

The evidence shows that the said reserves, totalling $12,596,987, represent the accrued depreciation, depletion and amortization of the plant in service, as of December 31, 1941; and the said amount is deducted from the aforesaid cost of plant to arrive at the rate base for purposes of this motion.

(g) The evidence shows that the allowable working capital is not in excess of $920,000, as follows:

Working Capital

Panhandle Eastern	$726,000
Illinois Natural	17,000
Michigan Gas	173,000
Indiana Gas	4,000
Total (Exh. 221)	$920,000

(h) Based upon paragraphs (a) to (g) above, the rate base, i. e., original cost, less accrued depreciation, plus working capital, is not in excess of $67,137,305, as here shown:

Rate Base

Cost of Gas Plant in Service at December 31, 1941	$78,814,292
Less:	
Depreciation Reserves	12,596,987
Net Original Cost	$66,217,305
Working Capital	920,000
Rate Base	$67,137,305

[fol. 16888] II. Gross Operating Revenue

The consolidated gross operating revenue of the respondents for the year 1941 amounted to $17,789,573 (Exh. 195).

III. Operating Expenses

(a) The consolidated operating expenses, as shown by the respondents' exhibits, for the year 1941, were as follows:

Operation and Maintenance	$2,648,694
Gas Purchased[1]	1,180,918
Depreciation, Depletion and Amortization	2,473,383
Amortization—Gas Contracts	332,143
Taxes—Federal Income[2]	2,063,175
Taxes—Federal Excess Profits[2]	1,677,054
Taxes—Property and Miscl.	901,387
Total (Exh. 195)	$11,276,754

[1] Inter-company gas purchases eliminated.

[2] Includes charges in lieu of Federal Income and Excess Profits Taxes in the amount of $823,881. Does not include pro-forma adjustments.

(b) Included in said operating expenses is the sum of $293,029 charged annually for the purpose of amortizing "Gas Sales and Purchase Contracts"; the evidence shows that the purported unamortized cost of such contracts in the amount of $1,172,115, as of December 31, 1941, does not represent actual cost but is in fact a write-up; and the said expense of $293,029 should be eliminated from operating expense.

(c) Said total operating expenses include the sum of $6,000 charged for rate case expense, which amount should be eliminated from operating expenses for purposes of this proceeding.

(d) The Federal income taxes should be reduced from $2,063,175 to $942,951, and the Federal excess profits taxes should be entirely eliminated in order to reflect the tax savings due to the indicated reduction in gross revenue hereinafter shown.

[fol. 16889] (e) The sum of the deductions set forth in paragraphs (b), (c) and (d) above total $3,096,307, leaving $8,180,447 as the maximum allowable operating expenses, as follows:

Operation and Maintenance	$2,642,694
Gas Purchased	1,180,918
Depreciation, Depletion and Amortization	2,473,383
Amortization—Gas Contracts	39,114
Taxes—Federal Income	942,951
Taxes—Property and Miscl.	901,387
Total (as adjusted)	$8,180,447

IV. Return

(a) The amount available for return after operating expenses and taxes, as adjusted in III, above, is $9,609,126, as follows:

Gross Operating Revenue	$17,789,573
Operating Expenses (as adjusted)	8,180,447
Net Operating Revenue	$ 9,609,126

(b) A fair rate of return for respondents is not more than 6 per cent, or $4,028,238 upon the rate base of $67,137,305.

(c) The gross revenue of respondents, therefore, exceeds a fair return by not less than $5,580,888 as follows:

Net Operating Revenue	$ 9,609,126
Return at 6%	4,028,238
Excess of Revenue Above 6% Return	$5,580,888

(d) During the five years 1937 to 1941, inclusive, Panhandle Eastern and subsidiary companies earned an average return of not less than 10.64% on their average net investment in plant of $53,997,936. (Exh. 222-A).

(e) During the period March 1, 1936, to December 31, 1941, Michigan Gas earned an average return of not less than 8½% on its average net investment in plant of $9,134,568 (Exh. 232).

[fol. 16890] 11. The evidence now clearly establishes that the present rates charged and collected by the respondents are unjust and unreasonable.

12. In order to aid the regulatory agencies in the States of Michigan, Ohio, Indiana, Illinois, Missouri and Kansas in fixing fair and reasonable rates for gas sold to ultimate consumers in said States, it is necessary that an immediate order be entered reducing the rates and charges of the respondents.

13. Nothing herein contained is to be taken as an admission of the accuracy or propriety of any of the claims made by the respondents or their witnesses.

Wherefore, Commission Counsel prays that the Commission enter an immediate interim order fixing just and reasonable rates for gas sold and transported by the respondents, Panhandle Eastern Pipe Line Company, Illinois Natural Gas Company and Michigan Gas Transmission Corporation.

HARRY S. LITTMAN,
Counsel for Federal Power Commission.

[fol. 16891] Certificate of Service

I hereby certify that today I have served copies of the attached motion on all parties to this proceeding by mailing such copies to their respective counsel of record.

Dated: Washington, D. C. This 11 day of May, 1942.

HARRY S. LITTMAN.

(Order of Federal Power Commission Reducing Rates, September 23, 1942.)

Memorandum of Clerk of U. S. Circuit Court of Appeals:

The Order of the Federal Power Commission of September 23, 1942, in Dockets Nos. G-200 and G-207 was made a part of the typewritten transcript of record at this place but same is omitted from the printed record to avoid duplication inasmuch as a copy of such Order of the Federal Power Commission heretofore appears in this printed record as a part of Exhibit A to the Petition of the Panhandle Eastern Pipe Line Company, et al., to Review and Set Aside an Order of the Federal Power Commission at folio page rr.

[fol. 16934] (Petition of Panhandle Eastern Pipe Line Company, Michigan Gas Transmission Corporation and Illinois Natural Gas Company for Extension of Time Within Which to File New Schedules of Rates of Charges.)

(Received October 9, 1942, Federal Power Commission.)

Panhandle Eastern Pipe Line Company, Michigan Gas Transmission Corporation, and Illinois Natural Gas Company, Respondents in these proceedings, respectfully request that this Commission extend the time for filing new schedules of rates and charges from October 15, 1942, as directed in the Commission's Order made pursuant to Opinion No. 80 in these proceedings, to December 1, 1942, and in support of this request Respondents state:

"1. That since the receipt on September 29, 1942 of the Commission's Order above referred to, Respondents have [fol. 16935] proceeded diligently in attempting to devise rates and charges which might effect a reduction of not less than $5,094,384.00 below their 1941 consolidated gross operating revenues of $17,789,573.00 when applied to their 1941 transportation and sales; that although a number of rates and charges of varying types and form which might accomplish the result ordered by the Commission have been considered, none of them has as yet proven satisfactory to Respondents from the standpoint of their desire to adopt a simple form of rate capable of meeting the varying conditions prevailing on their system and of equitably distributing the ordered reduction among their various customers.

Respondents further state that they are continuing their rate studies with diligence in an effort soon to design rates and charges which will be satisfactory to them and which they believe would satisfy their customers and this Commission if and when the Commission's Order becomes finally effective.

2. Respondents state that upon designing such rates and charges, they still will face the difficult task of designing new rate schedules which, insofar as possible, they hope

to make uniform and capable of accomplishing simplification of their entire rate structure. In this connection Respondents state that their present rate schedules are complicated and unwieldy by reason of the fact that each rate schedule applying to deliveries east of Dana, Indiana is accompanied by a separate carrying agreement between Panhandle Eastern and Michigan Gas; that anticipating an [fol. 16936] ultimate merger of Michigan Gas and Illinois Natural into Panhandle Eastern, it is the desire of Respondents, pending the anticipated merger, that any new sales rate schedules which might take the place of those presently existing be filed in the name of Panhandle Eastern and that all gas which might be transported and delivered by Illinois Natural and Michigan Gas be covered by one simple carrying agreement between Panhandle Eastern and each of its two subsidiaries.

3. Respondents further state that they presently have on file with this Commission sixty-four wholesale rate schedules with numerous supplements and although they already have accomplished uniformity in many of these schedules, it would be highly desirable from the standpoint both of this Commission and of Respondents if further elimination of nonuniform terms and conditions in Respondents' rate schedules could be accomplished. Respondents believe that with the possible exception of two customers where attending circumstances might require nonuniformity of terms and conditions, they can design rate schedules which will apply uniformly to all of their customers. Respondents hope and believe that with an extension of the time within which to file new rates and charges to December 1, 1942, they can design new rates and rate schedules which would be satisfactory to all concerned upon final effectiveness of the Commission's Order above referred to.

4. Respondents state that they have not yet determined [fol. 16937] whether to file with this Commission a Petition for Rehearing in these proceedings or (should such petition be filed and denied) whether to perfect an appeal to a Federal Circuit Court of Appeals having jurisdiction, but in any event Respondents state that they do not by this

request for an extension of time ask this Commission to extend the date from which new rates and charges shall be applicable in the event the Commission's Order pursuant to Opinion No. 80 in these proceedings should finally become effective.

Respectfully submitted,

PANHANDLE EASTERN PIPE LINE COMPANY,

MICHIGAN GAS TRANSMISSION CORPORATION,

ILLINOIS NATURAL GAS COMPANY,

By G. J. Neuner,
Vice President,
1221 Baltimore Avenue,
Kansas City, Missouri.

State of Missouri,

My Commission expires August 31, 1943.

[fol. 16938] (Order of Federal Power Commission Granting Extensions of Time to Panhandle Eastern Pipe Line Company, Michigan Gas Transmission Corporation and Illinois Natural Gas Company to File New Schedules of Rates and Charges.)

United States of America

Federal Power Commission.

Commissioners Leland Olds, Chairman, Claude L. Draper, Basil Manly, John W. Scott and Clyde L. Seavey.

October 12, 1942.

City of Detroit, Michigan and County of Wayne, Michigan,
Docket No. G-200, vs.
Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Corporation.

In the Matter of

Panhandle Eastern Pipe Line Company, Michigan Gas Transmission Corporation and Illinois Natural Gas Company.

Docket No. G-207.

Upon motion filed with the Commission October 9, 1942, by Panhandle Eastern Pipe Line Company, Michigan Gas Transmission Corporation and Illinois Natural Gas Company, praying that additional time be granted Respondent-Defendants for the preparation and filing of new schedules of rates and charges as provided for in Section (B) of the Commission's order of September 23, 1942:

It appearing to the Commission that:

Good cause has been shown for the granting of the extension of time hereinafter ordered:

The Commission orders that:

The time within which the Respondent-Defendants shall file the new schedules of rates and charges required by the Commission's order of September 23, 1942, be and the same is hereby extended to November 10, 1942, provided, however, that:

(i) The extension of time herein granted shall not operate as a change of the date on which the new schedules of rates and charges shall be effective, namely, November 1, 1942;

[fol. 16939] (ii) Nothing in this order shall be construed as staying the time within which Respondent-Defendants shall file a petition for rehearing or a petition for review as provided in Section 19 of the Natural Gas Act.

By the Commission.

J. H. GUTRIDE,
Acting Secretary.

[fol. 16940] (Petition of Panhandle Eastern Pipe Line Company, Michigan Gas Transmission Corporation and Illinois Natural Gas Company for Stay of Order of Federal Power Commission of September 23, 1942.)

(Received October 23, 1942, Federal Power Commission.)

To The Honorable Federal Power Commission:

Panhandle Eastern Pipe Line Company, Michigan Gas Transmission Corporation and Illinois Natural Gas Company, defendants-respondents in the above entitled and numbered causes, and herein termed respondents respectfully petition the Commission to enter and issue an order staying in all respects the effective date and operation of the Commission's order of September 23, 1942 entered pursuant to its Opinion No. 80, and served on respondents on September 28, 1942 (said order having, in effect, been amended by the Commission's order of October 12, 1942, extending the time in which respondents are required to file new schedules of rates and charges).

The following facts are alleged in support of this petition:

[fol. 16941] (1) Respondents have, within the time required by the National Gas Act and the Rules of the Commission, filed with the Commission their Petition for Re-

hearing and Reconsideration, in which they seek an order of the Commission abrogating and setting aside said order of September 23, 1942, which motion has not yet been determined by the Commission.

(2) In said petition, complaint is made of certain rulings of the Examiner, and of certain findings, holdings and orders of the Commission.

(3) Respondents have many customers who purchase gas for resale, under rate contracts and schedules of varying types, and there is a lack of uniformity in the prices paid by such distributors for the gas purchased by them.

(4) In the event said order is not stayed, and the Commission upon consideration shall grant respondents' Petition for Rehearing and Reconsideration, or if said petition be denied, and as a result of a proceeding for review filed in a court of competent jurisdiction, said order shall be modified or set aside, in whole or in part, respondents probably will be faced with the necessity of filing many suits to recover the deficiency in collections during the pendency of the consideration of said petition for rehearing by the Commission, and during the pendency of such review proceedings, if any; but the rights of respondents and their customers as well as the rights of the ultimate consumers may be fully protected by a reasonable impounding order issued by the Commission as a condition for stay.

(5) Respondents do not by this application for stay ask the Commission to postpone the date from which new rates and charges shall be applicable in the event the Commission's order pursuant to Opinion No. 80 shall become finally effective, but only that compliance with said order be stayed pending a consideration and determination by the Commission of their said Petition for Rehearing and Reconsideration, and pending a review, if any be sought, [fol. 16942] of said order by a court of competent jurisdiction as provided by the terms and provisions of the Natural Gas Act.

Respondents stand ready to comply with any reasonable impounding requirement which the Commission may find

appropriate as a condition for granting this application for stay.

Respectfully submitted,

PANHANDLE EASTERN PIPE LINE COMPANY,

MICHIGAN GAS TRANSMISSION CORPORATION,

ILLINOIS NATURAL GAS COMPANY,

By Glenn W. Clark, Attorney of Record,
1221 Baltimore Avenue,
Kansas City, Missouri.

State of New York,

Commission expires March 30, 1944.

[fol. 16944] (Petition of Panhandle Eastern Pipe Line Company, Michigan Gas Transmission Corporation and Illinois Natural Gas Company for Rehearing.)

(Received October 23, 1942, Federal Power Commission.)

To The Honorable Federal Power Commission:

Now come Panhandle Eastern Pipe Line Company, Michigan Gas Transmission Corporation and Illinois Natural Gas Company, defendants-respondents in the above entitled and numbered causes, and herein termed respondents, and apply for a rehearing and reconsideration on the order of the Commission dated September 23, 1942, and served on respondents on September 28, 1942. The grounds upon which this application is based are stated specifically in the specifications of error, hereinafter set out, addressed to certain rulings of the Commission's Examiner in the course of the hearing of evidence, and to certain rulings, holdings and findings in the memorandum opinion upon which said order is based, and in the order itself; and cer-
[fol. 16945] tain assignments are based on the failure in such order to make certain rulings, holdings and findings under the record in these proceedings.

Specifications of Error.

I.

The Examiner for the Commission erred in refusing to admit in evidence the exhibits showing the reproduction

cost new of respondents' physical properties, and the present value of such properties as evidenced by the reproduction cost new of such properties less observed depreciation thereof. Such facts are disclosed in Exhibits Nos. 39, 39A, 62, 83 and 84, objections to the admission of which were sustained by the Examiner, and subsequent tender of proof thereon rejected.

II.

The Examiner for the Commission erred in refusing to admit in evidence the present value of the gas leasehold estates owned by Respondent Panhandle Eastern, based on the prices at which said gas leaseholds could now be sold, whether the production therefrom be sold by the purchaser in a regulated or in an unregulated market. The details of such valuation and the testimony of the witness Wallace explanatory thereof fully appear in Exhibits 37 and 37A, objections to the admission of which were sustained by the Examiner, and subsequent tender of proof thereon rejected.

III.

The Examiner erred in refusing to admit in evidence testimony dealing with the value of the properties of Respondent Panhandle Eastern at the approximate date of the enactment of the Natural Gas Act. Such evidence was reflected in Exhibits 71 and 75. Objections were sustained by the Examiner to the admission of Exhibit 71, and motion to strike pages 17, 20, 21, 22 and 32 of Exhibit 75 was sustained. Subsequently tender of proof of Exhibit 71 and the stricken pages of Exhibit 75 was refused. The evidence so rejected was of importance because it, considered in [fol. 16946] connection with the additions to plant account and depreciation charged since 1937, has a bearing on the present value of Panhandle Eastern's properties, and a determination of an appropriate rate base and return.

IV.

The Commission erred in refusing to allow as a part of the rate base, the investment represented by work in progress on December 31, 1941, since such property represented actual cost on that date.

V.

The Commission erred in refusing to include in the rate base the property represented by construction work in progress on February 28, 1942, since such property represented actual cost on that date.

VI.

The Commission erred in refusing to include in the rate base the property represented by construction work in progress on March 31, 1942, since such property represented actual cost on that date.

VII.

The Commission erred in refusing to include in the rate base the additional capital expenditures, which are covered by current budgets, are in course of construction, and will be completed by the end of 1942, since the evidence clearly shows that the expenditures will be made, and that funds are on hand to make the required payments.

VIII.

The Commission erred in refusing to include as a part of the rate base the amount by which the Gas Plant classified was increased during the period December 31, 1941 to March 31, 1942 since such increase reflects actual cost to Respondents.

[fol. 16947]

IX.

The Commission erred in refusing to include in the rate base the unamortized portion ($251,505) of the item of $654,989 included in "old gas sales and purchase contracts" which concededly reflects cost to Panhandle Eastern.

X.

The Commission erred in refusing to accept as the rate base Respondents' "Prudent Investment" represented by its invested capital, adjusted by a reduction therefrom of the unamortized portion of the item representing the contracts acquired by Panhandle Eastern from Missouri Kansas Pipe Line Company, originally for $2,398,402, the only item reflected in the invested capital as to which any question has been raised relating to cost to Panhandle Eastern.

XI.

The Commission erred in failing to allow as a part of operating expenses the sum of $73,500 per annum required in 1942 and subsequent years, but not reflected in 1941 operating expenses, which additional expense results from payroll increases not incident to increase in revenues.

XII.

The Commission erred in failing to allow as a part of the operating expenses, the sum of $221,500, not reflected in 1941 expenses, required for emergency property protection as a result of the war.

XIII.

The Commission erred in failing to allow as an operating expense, the sum of $70,000 representing a reasonable annual charge for amortizing in five years the expense of these proceedings.

[fol. 16948]

XIV.

The Commission erred in failing to allow as an operating expense, the sum of $30,000 representing an increased cost of Employees' Welfare and Pension Expense resulting from the employees of Michigan Gas becoming employees of the Panhandle Eastern System and thereby entitled to participate in such benefits.

XV.

The Commission erred in failing to find and recognize that of the revenue received for 1941, at least $980,000 represented increased sales to companies engaged in war work, and did not represent normal sales.

XVI.

The Commission erred in using Respondents' 1941 experience as a test period without adjusting same so as to deduct the increased sales to purchasers engaged in war work, and so as to increase operating expenses by increases in payroll, cost of Employees' Welfare and amortization of rate case expenses.

XVII.

The Commission erred in using Respondents' 1941 experience as a test period, without adjusting same to take account of the certain increase in Federal Income and Excess Profits Taxes required by the 1942 act, which rates all must recognize will not be substantially reduced for many years.

XVIII.

The Commission erred in finding that 6½% is a fair return upon the rate base allowed because there is no evidence of probative value to support that finding.

XIX.

The Commission erred in finding that $4,363,925 constitutes a reasonable return to Respondents because there is no evidence of probative value showing that such amount [fol. 16949] is a fair and reasonable return on either Respondents' invested capital, or the fair value of their property.

XX.

The Commission erred in finding that $4,363,925 constitutes a reasonable return to Respondents because there is no evidence of probative value that such sum reflects that "cost of service" as that term is used in applying the prudent investment doctrine of regulation.

XXI.

The Commission erred in finding that $4,363,925 constitutes a reasonable return to Respondents, because there is no evidence of probative value that such a return will be adequate to attract capital to the enterprise.

XXII.

The Commission erred in finding that $4,363,925 constitutes a reasonable return to Respondents, because there is no evidence of probative value that such a return will be adequate to maintain and support their credit, and enable them to raise the money necessary for the discharge of their public duties.

XXIII.

The finding of the Commission that $4,363,925 constitutes a reasonable return to Respondents is against the uncontroverted evidence to the effect that such a return will not represent Respondents' cost of service, and the Commission erred in failing to so find.

XXIV.

The finding of the Commission that $4,363,925 constitutes a fair return to Respondents is against the uncontroverted evidence to the effect that such a return will not be adequate to attract capital to the enterprise, and the Commission erred in failing to so find.

[fol. 16950]

XXV.

The finding of the Commission that $4,363,925 constitutes a fair return to Respondents is against the uncontroverted evidence to the effect that such a return will not be adequate to maintain and support Respondents' credit and enable it to raise the money necessary for the proper discharge of their public duties.

XXVI.

The Commission erred in failing to adopt at least Respondents' Invested Capital (less the unamortized portion of the old gas sales and purchase contracts) as of March 31, 1942, in the sum of $76,563,961, as the appropriate rate basis and the cost of service thereof, $5,173,686 as the return to which Respondents are entitled,—a "rate of return" of 6.75% on the invested capital.

XXVII.

The Commission erred in failing to adopt at least Respondents' Pro Forma Invested Capital (less the unamortized portion of the old gas sales and purchase contracts) as of December 31, 1941 in the sum of $75,738,202, as the rate base, and the cost of service thereof, $5,074,292, as the return to which Respondents are entitled,—a rate of return of 6.69% on such invested capital.

XXVIII.

The Commission erred in the assumption that future increases in net revenues will equal the increases in expenses

since there is no evidence of probative value to sustain such assumption.

XXIX.

The Commission erred in taking into consideration the possibility that Respondents' lines may for a time be operated at a 90% capacity factor without also taking into consideration the additional capital expenditures which [fol. 16951] will be required to permit such operation more than a few months, and the increased unit production cost resulting therefrom.

XXX.

The Commission erred in holding that increased tax burdens must be borne by a regulated utility, and are not to be allowed for in the fixing of Respondents' rates.

XXXI.

The Commission erred in disallowing as an operating expense the amortization of that unamortized portion of the old gas sales and purchase contracts which represent cost to Panhandle Eastern.

XXXII.

The Commission erred in requiring a reduction of Respondents' rates and charges so as to reflect, when applied to their 1941 transportation and sales, a reduction of not less than $5,094,384 below their 1941 consolidated gross operating revenue; thus taking from Respondents a large portion of their required cost of service.

XXXIII.

The Commission erred in assuming jurisdiction of respondents' direct sales by taking the proceeds from such sales into consideration in determining the amounts of respondents' profits, and then directing that the excess return so determined [to] reduced through a reduction of the prices and charges for gas sold for resale.

XXXIV.

The Commission erred in failing reasonably to allocate respondents' earnings between regulated sales and unregulated sales.

[fol. 16952]

XXXV.

The Commission erred in failing to consider, in determining either the rate base or the appropriate return, the cost of carrying unused capacity until its use was required, since it was not shown that during the period 1932 to 1937 the earnings of respondent Panhandle Eastern constituted a reasonable return on its invested capital or that such cost was thereafter recouped from excessive earnings.

XXXVI.

The Commission erred in finding that the failure of respondent Panhandle Eastern fully to utilize its capacity during the development period 1932 to 1937 was because of the restraint of its holding company because

(1) There is no evidence of probative value sufficient to justify the finding.

(2) The amount of revenues, if any, lost to the company, as a result of such restraint, if any there was, is not made to appear.

(3) There is no evidence to support the finding that customers along the line were clamoring for service.

Wherefore, Respondents pray that they be granted a rehearing and reconsideration herein, and that the Commission enter an order abrogating and setting aside its order of September 23, 1942 directing a reduction of Respondents' rates.

Respectfully submitted,

PANHANDLE EASTERN PIPE LINE COMPANY,

MICHIGAN GAS TRANSMISSION CORPORATION,

ILLINOIS NATURAL GAS COMPANY

[fol. 16954] (Order of Federal Power Commission denying Petitions for Rehearing and for Stay in Dockets Nos. G-200 and G-207.)

United States of America,

Federal Power Commission.

Commissioners: Basil Manly, Acting Chairman, Claude L. Draper, John W. Scott and Clyde L. Seavey. Leland Olds not participating.

October 30, 1942.

City of Detroit, Michigan and County of Wayne, Michigan
Docket No. G-200 vs.
Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Corporation.

In the Matter of

Panhandle Eastern Pipe Line Company, Michigan Gas Transmission Corporation and Illinois Natural Gas Company.

Docket No. G-207.

Upon consideration of the petitions filed on October 23, 1942, by Panhandle Eastern Pipe Line Company, Michigan Gas Transmission Corporation and Illinois Natural Gas Company, Respondents-Defendants in the above-entitled matters, for a rehearing and for stay of the Commission's order reducing rates entered September 23, 1942, pursuant to Opinion No. 80;

The Commission finds that:

No new facts have been presented or alleged in the Respondents-Defendants' petitions which would justify a reversal or revision of the Commission's order and opinion, and no principles of law are stated in said petitions which were not fully considered by the Commission before it entered said order and opinion;

Therefore, the Commission orders that:

The said petitions be and the same are hereby denied.

[fol. 16959]

Exhibit Number	Description	Volume	Page
1	Statement of operating results of Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Company, 1938-1940.	XVII	10,775
2	Determination of possible revenue reduction.	XVII	10,783
3	Excerpts from Registration Statement of Panhandle Eastern Pipe Line Company filed with the Securities & Exchange Commission Feb. 12, 1937 with respect to gas reserves.	XVII	10,785
4	Excerpt from Registration Statement of Panhandle Eastern Pipe Line Company filed with the Securities & Exchange Commission Nov. 13, 1940 with respect to gas reserves.	XVII	10,786
5	Excerpts from Registration Statement of Panhandle Eastern Pipe Line Company filed with the Securities & Exchange Commission Nov. 13, 1940 with respect to design, construction and maintenance of property	XVII	10,789
6	Statement of operating expenses and taxes at 100% load factor operation	XVII	10,791
7	Statement as to necessary price per M.c.f. at 100% load factor	XVII	10,793
8	Statement of estimated effect of 100% load factor on earning power of system	XVII	10,795
9	Statement of factor effecting the nature and magnitude of reported net incomes.	XVII	10,796
10	Statement showing effect of variation in accounting practices on reported incomes of an enterprise.	XVII	10,799
11	Chart showing relation of yield of United States Treasury bonds and notes.	XVII	10,800
12	Statement showing United States Treasury bond yields.	XVII	10,801

13	Chart showing history of yields of United States bonds, 1920–1939.	XVII	10,806
14	Average yield of United States Treasury bond.	XVII	10,807
14-A	Securities & Exchange Commission releases Nos. 2778 and 2834—Findings and opinion of the Commission in the matters of Panhandle Eastern Pipe Line Company et al and order and amended findings supplementary thereto.	XVII	10,808
[fol. 16960] 15	System map Panhandle Eastern Pipe Line Company, August 31, 1941.	XVII	10,846
16	Map showing Panhandle Eastern Pipe Line Company production and gathering systems, 1941.	XVII	10,847
17	Miscellaneous data concerning property and operations of Panhandle Eastern Pipe Line Company.	XVII	
	Schedule 1. Panhandle Eastern Pipe Line Company system compressor stations.		10,848
	Schedule 2. List of communities receiving service directly or indirectly from Panhandle Company including population and number of customers as of June 30, 1941.		10,849
	Schedule 3. List of industrial customers receiving service direct from Panhandle Company system, June 30, 1941.		10,853
	Schedule 4. Well data 100% owned gas wells, Hugoton field, Kansas.		10,855
	Schedule 5. Description of compressor stations—equipment and structure.		10,865
	Schedule 6. Description of dehydration plants, structures and equipment.		10,892
	Schedule 7. Description of camps, structures and equipment.		10,895
	Schedule 8. Gas measurement department—property and equipment.		10,903
	Schedule 9. Pipe line department warehouses—location of and major items of pipe line and automotive equipment.		10,918
	Schedule 10. Description of automotive equipment.		10,925

	Schedule 11. Panhandle Eastern system summary—Miles of pipe by sizes, June 30, 1941.		10,926
18	Photographs of typical structures of Panhandle Company.	XVII	10,927
19	Map of Panhandle Eastern Pipe Line Company —Acreage in Panhandle field owned as of March 31, 1932.	XVII	10,947
20	Map of Hugoton and West Panhandle field showing portions of Southwestern Kansas and Oklahoma and Texas Panhandles.	XVII	10,948
[fol. 16961]	21 Structure contour map of West Panhandle field	XVII	10,949
22	Geologic cross section from northern Potter County to northwest Hutchinson County, Texas	XVII	10,950
23	Map of Hugoton west Panhandle fields — Rock pressure map, 1932	XVII	10,951
24	Map of Hugoton and west Panhandle fields — Rock pressure map, 1938	XVII	10,952
25	Map of Hugoton west Panhandle fields — Rock pressure map, 1939	XVIII	10,953
26	Map of Hugoton west Panhandle fields — Rock pressure map, 1940	XVIII	10,954
27	Map of Hugoton west Panhandle fields — Rock pressure map, 1941.	XVIII	10,955
28	Productivity chart showing varying conditions in the relation of gas pay thickness to initial open flow for representative wells in Moore and Potter Counties.	XVIII	10,956
29	Productivity chart showing varying conditions in the relation of gas pay thickness to initial open flow for representative wells in Carson County.	XVIII	10,957
30	Written testimony of witness Rufus E. Smith and Schedules 1 to 12 presented in connection with such testimony.	XVIII	10,958
31	Map of Hugoton west Panhandle fields showing initial open flow of wells.	XVIII	11,005
32	Map of Lakin-Hugoton-Guymon area of Kansas and Oklahoma, March 1939.	XVIII	11,006
33	Geologic cross section of the Lincoln-Hugoton-Guymon area of Kansas and Oklahoma.	XVIII	11,007

34	Graph showing the relation of gas pay thickness to initial open flow for wells in western Stevens County, Kansas, and northern Texas County, Oklahoma.	XVIII	11,008
35	Productivity chart showing the relation of gas pay thickness to initial natural open flow for representative wells in Stevens and Morton Counties, Kansas and North Texas County, Oklahoma.	XVIII	11,009
[fol. 16962] 36	-Written testimony of witness Glenn G. Bartle and schedules presented in connection with such testimony.	XVIII	11,010
37	Parts 1 and 2 (not received in evidence)	XIX & XX	11,045 & 11,538
37-A	(Not received in evidence)	XXI	12,014
38	Basic statistics used in calculating interest, ad valorem taxes and operating expenses attributable to unused capacity.	XXI	12,159
39	(Not received in evidence)	XXII	12,161
39-A	(Not received in evidence)	XXII	13,129
40	Table showing estimated main line sales, years 1941-1946, incl.	XXIII	13,149
41	Graph showing sales and gas plant by years, Panhandle Eastern Pipe Line Company and subsidiary companies.	XXIII	13,150
42	Written testimony of witness C. H. Hinton.	XXIII	13,151
43	Schedules presented in connection with the written testimony of C. H. Hinton.	XXIII	13,198
44	Map of Hugoton and West Panhandle fields showing portions of southwestern Kansas and Oklahoma and Texas Panhandle's present and probable development, Panhandle Eastern Pipe Line Company, without consideration for increased load.	XXIII	13,203
45	Map of Hugoton and West Panhandle fields showing portions of southwestern Kansas and Oklahoma and Texas Panhandles present and probable development, Panhandle Eastern Pipe Line Company, giving consideration to expected increased loads.	XXIII	13,204
46	Map of production properties and gathering system west Panhandle field — Texas divided into group areas.	XXIII	13,205

	47	Panhandle Eastern Pipe Line Company and subsidiary companies, future capital requirements, gas transmission facilities, Liberal Station and eastward.	XXIII 13,206
[fol. 16963]	48	Map showing balance sheets per books Panhandle Eastern Pipe Line Company and subsidiary companies, 1930–1941.	XXIII 13,207
	49	Income statement per books—period from April 1, 1932 to December 31, 1941.	XXIII 13,210
	50	Statement showing earned surplus per books, period from commencement of operations to June 30, 1941.	XXIII 13,212
	51	Statement showing capital surplus per books, period from September 1, 1930 to June 30, 1941.	XXIII 13,214
	52	Statement showing investment in gas plant.	XXIII 13,215
	53	Statement of dividends paid on Class A and Class B Preferred Stocks from beginning to September 1, 1941.	XXIII 13,217
	54	Statement of dividends paid on Common Stock from beginning to September 1, 1941.	XXIII 13,219
	55	Statement showing comparison of sales and revenue, principal industrial customers, years 1939, 1940 and 1941.	XXIII 13,220
	55-A	Statement showing comparison of sales and revenue, principal industrial customers, years 1939, 1940 and 1941.	XXIII 13,221
	56	Statement of gas produced, period from April 1, 1932 to June 30, 1941.	XXIII 13,222
	57	Statement of gas purchased, period from April 1, 1932 to June 30, 1941.	XXIII 13,223
	58	Statement of gas revenue, period from April 1, 1932 to June 30, 1941 and schedule showing detail of sales to various types of customers 1939 and 1940.	XXIII 13,224
	59	Statement of gas revenue by states, period from April 1, 1932 to December 31, 1941.	XXIII 13,229
	60	Statement showing sales agreements with other gas companies as at June 30, 1941.	XXIII 13,230
	61	Study of current and future trends in commodity prices and wages, by David Friday.	XXIII 13,238
	62	(Not received in evidence)	

[fol. 16964]	63	Investors' appraisal of the risk of capital in the natural gas industry as compared with other divisions of the utility industry, Vol. 1, summary of analyses, prepared by Paul B. Coffman, Vice-President of Standard and Poors Corp.	XXIII 13,321
	64	Statistics supporting data, Vol. 1 (Exh. 63) Appendixes A, B, and C.	XXIV 13,379
	65	Study relative to rate of return on Panhandle Eastern Pipe Line Company prepared by Paul B. Coffman, Vice President, Standard and Poors Corp.	XXIV 13,533
	66	Panhandle Eastern Pipe Line Company annual accrual for amortization for property as of June 30, 1941.	XXV 13,650
	66-A	(First) correction of Exhibit 66.	XXV 13,676
	66-A	(Second) correction of Exhibit 66.	XXV 13,699 A
	67	Panhandle Eastern Pipe Line Company and subsidiary companies unit charge for depletion as of June 30, 1941.	XXV 13,700
	68	Panhandle Eastern Pipe Line Company and subsidiary companies annual accrual rate for replacements of property as of June 30, 1941.	XXV 13,707
	68-A	Correction of Exhibit 68.	XXV 13,708
	69	Statement showing amount of depreciation on book cost of property as of June 30, 1941.	XXV 13,709
	70	(Not received in evidence)	XXV 13,711
	71	(Not received in evidence)	XXV 13,712
	72	Statement of net additions to gas plant per books from October 1, 1938 to June 30, 1941.	XXVI 14,178
	73	Comparison of cost of certain equipment, materials and labor, Panhandle Eastern Pipe Line Company and Illinois Natural Gas Company.	XXVI 14,179
	74	Statement of total additional necessary materials and supplies by departments.	XXVI 14,198
	75	Natural gas supply, value of gas reserves and wells February 1, 1937 (excluded in part).	XXVI 14,202
[fol. 16965]	76	Natural gas supply September 30, 1940.	XXVI 14,243
	77	Description of physical property of Michigan Gas Transmission Corporation.	XXVI 14,251

78	Map showing transmission lines of Michigan Gas Transmission Corporation.	XXVI	14,310
79	Comparison of daily provided capacity to deliver firm gas with maximum daily delivery of firm gas from system of Michigan Gas Transmission Corporation.	XXVI	14,311
79-A	Comparison of daily provided capacity to deliver firm gas with maximum daily delivery of firm gas and total delivery of gas from the pipe lines owned or operated by Michigan Gas Transmission Corporation for the winter period of 1941-1942 to February 27, 1942.	XXVI	14,312
79-B	Total delivery of gas from pipe lines owned and operated by Michigan Gas Transmission Corporation on days on which the delivery of firm gas from system was the maximum.	XXVI	14,313
80	Report of inspection of equipment in the compressor stations of the Michigan Gas Transmission Corporation — H. C. Lehn.	XXVI	14,314
81	Depreciation study, Michigan Gas Transmission Corporation — H. S. Riddle.	XXVI	14,321
82	Accrued depreciation on compressor station structure, measuring and regulating station structures and equipment and other transmission structures and general equipment as of June 30, 1941 — Francis S. Haberly.	XXVI	14,369
83	Reproduction cost new of plant and property of Michigan Gas Transmission Corporation as of June 30, 1941 — Francis S. Haberly (excluded in part).	XXVI	14,375
84	Reproduction cost new less depreciation of Michigan Gas Transmission Corporation as of June 30, 1941 — Francis S. Haberly (excluded in part).	XXVI	14,443
85	Tabulation showing average age as of June 30, 1941 and estimated remaining life and estimated salvage value of short-lived property of Michigan Gas Transmission Corporation.	XXVI	14,452
[fol. 16966]	86 (Not received in evidence)	XXVI	14,453
87	Materials and supplies restatement of cost of major items as of June 30, 1941, Michigan Gas Transmission Corporation—Francis S. Haberly.	XXVI	14,466
88	Michigan Gas Transmission Corporation—comparative balance sheets, per books as at December 31, 1936 to 1940, inclusive, and June 30, 1941.	XXVI	14,475

89	Michigan Gas Transmission Corporation statement showing earned surplus per books for the ten months ended December 31, 1936, years 1937 to 1940, inclusive, year and six months ended June 30, 1941.	XXVI	14,477
90	Michigan Gas Transmission Corporation—statement showing capital surplus, per books, for the ten months ended December 31, 1936, years 1937 to 1940, inclusive, year and six months ended June 30, 1941.	XXVI	14,478
91	Michigan Gas Transmission Corporation—preliminary report on original cost studies by Central Service Corporation.	XXVI	14,479
92	Michigan Gas Transmission Corporation statement showing original cost depreciated to present conditions as at June 30, 1941 and observed depreciation as at June 30, 1941.	XXVI	14,507
93	Michigan Gas Transmission Corporation—statement of contributions made to customers for business development for the years 1936, 1937 and five months ended May 31, 1938.	XXVI	14,508
94	Michigan Gas Transmission Corporation—statement showing working capital as of June 30, 1941.	XXVI	14,510
95	Michigan Gas Transmission Corporation—estimated cost of completing work in progress at June 30, 1941 and estimated gross income to be derived from the completed projects.	XXVI	14,517
96	Michigan Gas Transmission Corporation—estimated cost of rate gas proceedings before Federal Power Commission.	XXVI	14,518
97	(Not received in evidence)	XXVI	14,519
[fol. 16967] 98	Michigan Gas Transmission Corporation—estimated annual amortization short-lived property, twenty-four and one-half year amortization period.	XXVI	14,529
99	Michigan Gas Transmission Corporation—statement of income and expense per books for years ended December 31, 1936 to 1940, inclusive, twelve months ended June 30, 1941 and six months ended June 30, 1941 and December 31, 1940.	XXVI	14,530
100	Michigan Gas Transmission Corporation—statement of income and expense per books and after adjustments and redistributions necessary to reflect the 2-6 months period per books on an annual basis.	XXVI	14,533

101	Michigan Gas Transmission Corporation—comparative statement of operating revenues.	XXVI	14,537
102	Michigan Gas Transmission Corporation—operation and maintenance expense per books for the twelve months ended June 30, 1941.	XXVI	14,538
103	Michigan Gas Transmission Corporation—statement showing gas balance, gas transported, gas used by Company, line losses and gas purchased.	XXVI	14,540
104	Michigan Gas Transmission Corporation—estimates—original cost rate base, per formula utility income and allowance for amortization of investment, etc.	XXVI	14,541
105	Michigan Gas Transmission Corporation—estimated average annual increased Federal nominal and excess profits taxes responsive to the corporation's operations based on 1941 Act.	XXVI	14,547
106	Registration statement of Panhandle Eastern Pipe Line Company No. 2-4597, filed with the Securities & Exchange Commission November 18, 1940.	XXVII	14,548
107	Report A-11488 of the committee on stock list, New York Stock Exchange, authorizing the listing of the first mortgage and first lien 3% bonds, Series B due November 1, 1960 of Panhandle Eastern Pipe Line Company.	XXVII	14,651
[fol. 16968] 108	Letter of P. McDonald Biddison re provision for retirements, depletion and amortization for year 1938.	XXVII	14,732
109	Letter of P. McDonald Biddison re provision for retirements, depletion and amortization for year 1939.	XXVII	14,733
110	Letter of P. McDonald Biddison re provision for retirements, depletion and amortization for year 1940.	XXVII	14,734
111	Letter of P. McDonald Biddison re provision for retirements, depletion and amortization for year 1941.	XXVII	14,735
112	Table of subsidiary companies of Panhandle Eastern Pipe Line Company.	XXVII	14,736
113-129 Incl.	Identified only—(not received in evidence)		
130	Details of data used in Exhibit No. 44, C. J. Peterson, witness—as requested by Federal Power Commission.	XXVII	14,739

131	Future division of production between fields considering a reasonable expected load increase.	XXVII	14,768
132	Future division of production between fields without consideration for increased loads.	XXVII	14,769
133	Graph showing pressure trend—Panhandle field, Texas.	XXVII	14,770
134	Past production and estimated future production from Panhandle field, Texas.	XXVII	14,771
135	Graph showing rate of pressure drop from 1935 to 1940—Panhandle field performance.	XXVII	14,772
136	Charts of Panhandle Eastern Pipe Line Company wells—pressure trend in group areas.	XXVII	14,773
137	Acres used in determining weighted average pressures of Texas Panhandle fields.	XXVII	14,783
138	Dry gas production and pressure decline—Texas Panhandle filed.	XXVII	14,784
[fol. 16969] 139	Estimated intake pressures at Sneed compressor station.	XXVII	14785
140	Estimated average working pressures at well head for "group areas" shown on Exhibit 46.	XXVII	14,786
141	Annual and cumulative production from Panhandle field, Texas.	XXVII	14,787
142	Summary of cost of gas produced and purchased —basic load for the years 1940-46, inclusive.	XXVII	14,789
143	Summary of cost of gas produced and purchased —estimated future load for the years 1940 to 1946, inclusive.	XXVII	14,795
144	Estimate of prospective loads.	XXVII	14,801
145	Panhandle Eastern Pipe Line Company—compiled registration statement No. 2-4919 filed with the Securities & Exchange Commission December 24, 1941.	XXVIII	14,824
145-A	Post-effective amendment No. 1 to registration statement No. 2-4919.	XXVIII	14,968
146	Prospectus Panhandle Eastern Pipe Line Company $10,000,000 first mortgage series C due January 1, 1963 and 150,000 shares % cumulative preferred stock.	XXVIII	15,006
147	Holding Company Act Release No. 3286, Jan. 23, 1942—findings and opinion of the Securities & Exchange Commission in the matter of Columbia Gas and Electric Corporation et al.	XXIX	15,091

148	Order of the Securities & Exchange Commission dated January 21, 1942 consenting to the filing of amendments to registration statement No. 2-4919 in the matter of Panhandle Eastern Pipe Line Company.	XXIX	15,116
149	Statement showing investment by owners and long term creditors at June 30, 1941, Panhandle Eastern Pipe Line Company.	XXIX	15,117
150	Financial data of common stock issues of electric and gas utilities, years 1935 to 1940, inclusive.	XXIX	15,118
[fol. 16970] 151	Earnings—price ratios of common stocks in various divisions of the utility industry.	XXIV	15,122
152	Estimate of Federal Income and excess profits taxes, applying rates levied in the Revenue Act of 1941 to net income for the year ended June 30, 1941, Panhandle Eastern Pipe Line Company.	XXIX	15,131
153	Statement of cost of business development period from April 1, 1932 to June 30, 1941, Panhandle Eastern Pipe Line Company.	XXIX	15,135

[fol. 16986] (Order of United States Circuit Court of Appeals directing Respondents to Show Cause why Petition for stay of Rate Order should not be granted.)

United States Circuit Court of Appeals, Eighth Circuit.

November Term, 1942.
Monday, November 2, 1942.

No. 12,466.

Panhandle Eastern Pipe Line Company, a Corporation, Illinois Natural Gas Company, a Corporation, and Michigan Gas Transmission Corporation, a Corporation, Petitioners,

vs.

Federal Power Commission, City of Detroit, County of Wayne, Michigan Consolidated Gas Company, a Corporation, and Michigan Public Service Commission.

This cause this day came on for hearing before the Court upon the Petition of Panhandle Eastern Pipe Line Company, Illinois Natural Gas Company, and Michigan Gas Transmission Corporation for a stay, pending review, of a Rate Order of the Federal Power Commission. The petition is presented to the Court by Mr. D. H. Culton, attorney for petitioners, and counsel for respondents not being notified of the filing and presentation thereof, It is Ordered that the respondents above named, and each of them, show cause before this Court on Saturday, November 14, 1942, at ten o'clock in the forenoon in the United States Court House in the City of St. Louis, Missouri, why the petition for an order should not be granted staying the operation of the order of the Commission dated September 23, 1942, pending the preparation and filing by petitioner in this Court with the time prescribed by the Natural Gas Act of their petition for review, and pending the review of said order by this Court.

And it is further Ordered by this Court that pending the disposition of this order to show cause the enforcement of the said order of the Federal Power Commission is hereby suspended.

A copy of this order and of the aforesaid petition shall be transmitted to counsel for the respective parties.

November 2, 1942.

[fol. 16987] (Order of United States Circuit Court of Appeals Denying Petition for Stay of Operation of Rate Order Without Prejudice, etc.)

United States Circuit Court of Appeals,
Eighth Circuit.

November Term, 1942.

Saturday, November 14, 1942.

Panhandle Eastern Pipe Line Company, a Corporation, Illinois Natural Gas Company, a Corporation, and Michigan Gas Transmission Corporation, a Corporation, Petitioners.

No. 12466. vs.

Federal Power Commission, City of Detroit, County of Wayne, Michigan Consolidated Gas Company, a Corporation, and Michigan Public Service Commission.

Order was entered by this Court on November 2, 1942, directed at the above named respondents to show cause why the petition should not be granted for an order staying the operation of the rate order of the Federal Power Commission dated September 23, 1942, pending the filing by petitioners in this Court of their petition to review and pending the review of said order. Said order to show cause was made returnable this day and response of the Federal Power Commission and answer of the Michigan Consolidated Gas Company have been filed.

Following counsel have presented oral argument:

For Petitioner: Mr. D. H. Culton.

For Respondents: Federal Power Commission, Mr. Harry S. Littman, Senior Attorney, County of Wayne, Mr. Harold Goodman, City of Detroit, Mr. James H. Lee, As-

sistant Corporation Counsel. Michigan Consolidated Gas Company, Mr. Park Chamberlain.

After hearing counsel and having considered the various matters and the Court being fully advised, It is ordered by the Court that said petition for stay be, and is hereby, denied without prejudice to the filing of a petition for the same or similar relief after petition for review of the order of the Federal Power Commission has been filed and the review docketed in this Court.

November 14, 1942.

[fol. 16988] (Order of United States Circuit Court of Appeals Granting Stay Pending Further Hearing of Application Therefor.)

United States Circuit Court of Appeals,
Eighth Circuit.

November Term, 1942.

Monday, November 23, 1942.

Panhandle Eastern Pipe Line Company, a Corporation, et al., Petitioners,
No. 12,466. vs.
Federal Power Commission, et al., Respondents.

This comes before the Court on the application of petitioners for stay order pending disposition of their petition to review and set aside the order of the Federal Power Commission, and the Court being advised,

It is Ordered that such stay be granted as of this date until there can be further hearing upon and determination of such application—hearing being set for Saturday, November 28, 1942.

November 23, 1942.

[fol. 16989] (Order of United States Circuit Court of Appeals Granting Stay of Order of Federal Power Commission Dated September 23, 1942, Requiring Reduction in Rates and Charges for Gas Furnished by Petitioners, etc.)

United States Circuit Court of Appeals,
Eighth Circuit.

November Term, 1942.

Monday, December 7, 1942.

Panhandle Eastern Pipe Line Company, a Corporation, et al., Petitioners,
No. 12,466. vs.
Federal Power Commission, et al., Respondents.

This matter comes before the Court upon the petition of petitioners for an order of stay of the order of the Federal Power Commission, dated September 23, 1942, requiring reduction in rates and charges for gas furnished by petitioners; the pleadings filed thereto; the reply of the petitioners; various memoranda presented by the parties; and oral presentation by Mr. Glenn W. Clark and Mr. D. H. Culton for petitioners, Mr. Harry S. Littman for the Commission, Mr. Harold Goodman for Wayne County, Mr. James H. Lee for the City of Detroit, and Mr. Park Chamberlain for Michigan Consolidated Gas Company.

Until further order of this Court, the above order of the Federal Power Commission is stayed upon the conditions following:

1. The monthly difference between payments to petitioners under existing rates or arrangements and those required under the order of the Commission shall be promptly paid over to John G. Hughes of Kansas City, Missouri, as the custodian of this Court, not later than the twenty-fifth of the succeeding month, to be held by him for the benefit of the ultimate consumers or of petitioners as in this litigation may be determined entitled thereto. Such

payments for months prior to this order shall be made by December 15, 1942. Triplicate receipts for each of such payments shall be given petitioners by the custodian, one of which shall be promptly filed, by petitioners, with the Clerk of this Court and one with the Federal Power Commission.

[fol. 16990] 2. The entire expenses of impounding (including, among other things, protecting, investing and distributing to petitioners or to ultimate consumers) of these funds shall be borne by petitioners. Whether any earnings on such funds (while so impounded) may be applied upon such expenses is reserved for future determination. When and as required by orders of this Court, petitioners shall pay to the custodian such expense money, upon triplicate receipts, which shall be filed as above.

3. No interest shall be charged petitioners upon such impounded funds unless allowed upon application hereafter made by respondents or any of them. Such future applications may be made only (a) if and when petitioners fail to be ready to present this review upon the merits on May 14, 1943 (as set for hearing by a separate order entered as of this date), or (b) if and when this Court shall enter its decree or order sustaining the above order of the Commission and shall deny any petition for rehearing which may be filed thereto. Any interest allowed hereafter shall be at the rate of four percentum annually from the date of such allowance or thereafter as required by any orders of allowance.

4. Full power and jurisdiction is reserved to cancel or modify this order and to enter any other orders (with or without application of the parties) to protect or to promote the rights and interests of the parties to his litigation and of the ultimate consumers financially interested in the impounded funds.

It is further Ordered that the Clerk of this Court is directed to transmit a copy of this order to each of the parties to this proceeding or to their above counsel.

December 7, 1942.

[fol. 16991] (Order of United States Circuit Court of Appeals Appointing John G. Hughes as Custodian of Funds to be Impounded Under Provisions of Stay Order.)

United States Circuit Court of Appeals,
Eighth Circuit.

November Term, 1942,

Monday, December 7, 1942.

Panhandle Eastern Pipe Line Company, a Corporation, et al., Petitioners,
No. 12,466. vs.
Federal Power Commission, et al., Respondents.

It is Ordered that Mr. John G. Hughes, of Kansas City, Missouri, is hereby appointed an officer of this Court for the purposes of acting as Custodian of the funds to be impounded under the provisions of an order of stay (entered at this time). He shall qualify by filing with the Clerk of this Court a bond in the sum of One Hundred Thousand ($100,000.00) Dollars, to be approved by any Judge of this Court. Upon order of this Court, the premium for such bond shall be paid by petitioners as an expense of this review proceeding. All expenditures of the Custodian allowed by this Court and any compensation so allowed him shall (upon order of this Court), be paid by petitioners as expenses of this proceeding.

Quarterly (beginning March 31, 1943), such Custodian shall file reports of his receipts, expenditures and disposition of funds on hand and shall make any other reports as required by this Court.

He shall pay out no money except upon the order of this Court and all bank deposits (herein provided for) made by him shall be subject to this provision. As money is received by the Custodian, he shall promptly deposit the same in either the Commerce Trust Company or the First National Bank (both of Kansas City, Missouri) or in both of such banks.

The Custodian or any party to this review proceeding may, at any time, call to the attention of this Court any

action or lack of action by the Custodian, by any party to this proceeding or by any one which might tend to defeat the purpose of this Court to collect, impound and eventually distribute the difference in rates or charges under existing contracts or arrangements of petitioners and in rates or charges under the order of the Federal Power Commission involved in this review proceeding.

It is further Ordered that the Clerk of this Court is directed to transmit a copy of this order to each of the parties to this proceeding or to their counsel.

December 7, 1942.

[fol. 16992] (Order of United States Circuit Court of Appeals as to form of record to be printed and fixing time for filing Designations therefor.)

United States Circuit Court of Appeals,
Eighth Circuit.

November Term, 1942.

Monday, December 7, 1942.

Panhandle Eastern Pipe Line Company, a Corporation, et al., Petitioners,
No. 12,466. vs.
Federal Power Commission, et al., Respondents.

This matter comes before the Court upon the oral request of counsel for petitioners and for the respondent Federal Power Commission as to the form of condensation of the evidence taken before the Commission for printing in this review proceeding. The Court having heard the views of such counsel and being advised thereby as to the situation,

It is Ordered:

That the evidence to be printed for presentation of this review proceeding be determined as follows: Petitioners to designate such portions of the evidence as they desire printed, in question and answer form, and serve identifying notice of such designations upon respondents on or before

January 15, 1943; that, within thirty (30) days after receipt of such designations, respondents designate such additional portions of the evidence as they desire included and serve identifying notice thereof upon petitioners; that the portions thus designated by the parties be printed as one transcript and in the order in which the evidence so designated appears in the typewritten transcript.

December 7, 1942.

[fol. 16993] (Order of United States Circuit Court of Appeals Instructing Custodian as to Manner of Handling Funds and Securities in his Possession.)

United States Circuit Court of Appeals,
Eighth Circuit.

November Term, 1942.

Saturday, December 12, 1942.

Panhandle Eastern Pipe Line Company, a Corporation, et al., Petitioners,
No. 12,466. vs.
Federal Power Commission, et al., Respondents.

On Application presented to this Court on this 11th day of December, 1942, by John G. Hughes (appointed on December 7, 1942, as an officer of this Court for the purpose of acting as Custodian of the funds to be impounded under the provisions of an Order of Stay entered on the same date) for an order of this Court instructing him with respect to the manner in which he shall properly handle and safeguard any and all securities which he may from time to time purchase and come into possession of, as such Custodian, pursuant to orders of this Court in this proceeding,

It is Ordered:

(1) That when and as such Custodian shall purchase and come into possession of any securities, pursuant to the order of this Court in this proceeding, he shall forthwith deposit the same with the Federal Reserve Bank of Kansas City, at its office in Kansas City, Missouri, said bank to hold said securities in safekeeping subject solely to the order and direction of this Court, and no securities so deposited shall be withdrawn except upon specific order of this Court.

(2) That such Custodian, in anticipation of the purchase and deposit, as aforesaid, of securities, shall deliver promptly to the Federal Reserve Bank of Kansas City, Missouri certified copies of the Order of this Court dated December 7, 1942, appointing him an officer of this Court, the Order of Stay entered by this Court on December 7, 1942, in this proceeding, this Order, and, from time to time [fol. 16994] as entered, any order of this Court authorizing such Custodian to invest funds impounded by such Custodian in securities or authorizing withdrawal thereof from the custody of such Federal Reserve Bank or otherwise effecting the custody thereof by it.

December 12, 1942.

[fol. 16995] (Order of United States Circuit Court of Appeals, authorizing Custodian to purchase certain securities as investments.)

November Term, A. D. 1942.

Saturday, December 12, 1942.

On application presented to this Court on the 11th day of December, 1942, by John G. Hughes (appointed on December 7, 1942, as an officer of this Court for the purpose of acting as Custodian of the funds to be impounded under the provisions of an Order of Stay entered in this proceeding on December 7, 1942) for an order of this Court authorizing him, as Custodian, to place his order for Seven-eighths Per Cent Treasury Certificates of Indebtedness of Series E-1943 in an amount not to exceed $2,000,000.00, par value, plus accrued interest, if any, and to purchase said securities up to that amount when and as he receives sufficient payments from petitioners,

It is Ordered:

That John G. Hughes of Kansas City, Missouri, appointed on December 7, 1942, as Custodian of the funds to be impounded under the provisions of an Order of Stay entered in this proceeding on the same date, is hereby authorized to place his order, as Custodian, for the above described securities, dated and bearing interest from December 1, 1942 and due December 1, 1943, in an

amount not to exceed $2,000,000.00, par value, plus accrued interest, if any, such order for securities to be subject to no premium or penalties except accrued interest.

It is further Ordered that such Custodian is hereby authorized to purchase from time to time and pay for such portions of the securities so ordered as and when the [fol. 16996] funds then paid to him for impoundment by petitioners will allow, payments therefor by him to be made from his bank Account Number 1.

December 12, 1942.

[fol. 16997] (Order of United States Circuit Court of Appeals directing Petitioners to pay to Custodian certain sums to cover Bond Premium, etc.)

November Term, A. D. 1942.

Saturday, December 12, 1942.

On application presented to this Court on this 11th day of December, 1942, by John G. Hughes (appointed on December 7, 1942, as an officer of this Court for the purpose of acting as Custodian of the funds to be impounded under the provisions of an Order of Stay entered on December 7, 1942) for an order of this Court (1) directing Petitioners in this proceeding to pay to such Custodian the sum of $1,100.00 required to pay the premium of the Custodian's bond and for anticipated general expenses of the Custodian, (2) fixing and requiring Petitioners to pay the Custodian's monthly compensation, and (3) authorizing the Custodian to expend such amounts for the purposes required in his application,

It is Ordered:

1. That Petitioners (or any one of them) promptly pay to such Custodian the sum of $1,000.00 which amount the Custodian is hereby ordered to pay to R. B. Jones & Sons, Inc., as the premium for the Custodian's bond, which was approved by this Court on December 10, 1942, such payment to be made from his bank Account Number 2.

2. That Petitioners (or any one of them) promptly pay to such Custodian the sum of $100.00, to be used by the Custodian as a general expense fund, he being hereby

authorized to expend so much of said sum from time to [fol. 16998] time as may be necessary to cover his general expenses in carrying out his duties as Custodian, such expenditures to be made from his bank Account Number 2.

3. That the compensation of such Custodian is hereby fixed at $200.00 per month and Petitioners (or any one of them) are hereby ordered and directed, until further order of this Court, to pay to John G. Hughes of Kansas City, Missouri, as the Custodian appointed by this Court, on or before the last day of December, 1942, and on and before the last day of each succeeding month, the sum of $200.00. The Custodian is hereby authorized, until further order of this Court, to pay to himself, individually, from his bank Account Number 2, as Custodian of this Court, the amount of $200.00 per month as his compensation for performing the duties of Custodian.

December 12, 1942.

[fol. 16999] (Order of United States Circuit Court of Appeals requiring Custodian to set up Account No. 1 and Account No. 2, etc.)

November Term, A. D. 1942.

Saturday, December 12, 1942.

Under the provisions of the Stay Order of December 7, 1942, it was provided that described funds should be paid by petitioners to John G. Hughes, as Custodian, for impoundment, and it was further provided therein that petitioners should, as and when ordered by this Court, pay to the Custodian money needed for expenditures by the Custodian for his compensation and for other expenses; also, in the order of December 7, 1942, appointing John G. Hughes as Custodian, it was provided that he should promptly deposit all receipts in designated banks. For the purpose of securing entire separation of such receipts for and payments from impoundments and such receipts for and payments from expenses, until further order of this Court,

It is Ordered that the Custodian shall open and keep two separate deposit accounts in said banks or bank to

be designated as "Account Number 1" and "Account Number 2". In Account Number 1 shall be deposited receipts of payments to be impounded and any earnings thereon or accumulations thereof; in Account Number 2 shall be deposited receipts of payments for expenses.

It is further Ordered that no payment or expenditure of money shall be made by the Custodian except by check upon the appropriate account; and that all checks drawn by the Custodian shall state, upon the face thereof, the account upon which drawn and the date of the order of this Court authorizing the expenditure for which the check is drawn.

It is further Ordered that the Custodian keep such books [fol. 17000] of account and office files as will faithfully and clearly reflect each and all receipts and expenditures and transactions by him as Custodian.

December 12, 1942.

[fol. 17001] (Order of United States Circuit Court of Appeals authorizing Custodian to purchase certain Securities, etc.)

January Term, A. D. 1943.

Tuesday, February 23, 1943.

On Application presented to this Court on the 23rd day of February, 1943, by John G. Hughes (appointed on December 7, 1942, as an officer of this Court for the purpose of acting as Custodian of the funds to be impounded under the provisions of an Order of Stay entered in this proceeding on December 7, 1942) for an order of this Court authorizing and directing him, as Custodian, to purchase Treasury Tax Savings Notes, Tax Series C, with Funds to be received by him from Petitioners in February and March of 1943 and available for investments in addition to those heretofore authorized by this Court,

It is Ordered:

That John G. Hughes of Kansas City, Missouri, appointed on December 7, 1942, as Custodian of the funds to be impounded under the provisions of an Order of Stay entered in this proceeding on the same date, is hereby

authorized and instructed to purchase United States of America Treasury Tax Savings Notes, Tax Series C, with that portion of those funds to be paid to him for impoundment by Petitioners on or before February 25, 1943 (estimated to be approximately Six Hundred Seventy Five Thousand ($675,000.00) Dollars, over and above approximately Two Hundred Eighty One Thousand Six Hundred ($281,600.00) Dollars required to take up the unpaid balance of the Seventh-eighths Per Cent Treasury Certifi- [fol. 17002] cates of Indebtedness of Series E-1943 ordered for purchase by the Custodian pursuant to Order of this Court, dated December 12, 1942, and with all or substantially all of the funds to be so paid to him on or before March 25 [1942] payments for such notes to be made from his bank account Number 1.

It is further ordered that upon the purchase of such securities by the Custodian, he immediately deposit the same with the Federal Reserve Bank of Kansas City at its office in Kansas City, Missouri, in accordance with this Court's Order, dated December 12, 1942, instructing the Custodian with respect to the manner in which to properly handle and safeguard securities which he may from time to time purchase or come into possession of as such Custodian.

February 23rd, 1943.

[fol. 7199] (Order of Submission.)

May Term, 1943.

Friday, May 14, 1943.

This cause having been called in its regular order, upon application of counsel for the respective parties in open Court, the time for oral argument was enlarged and permission granted for oral argument by more that two counsel on each side. Oral argument was made by Mr. D. H. Culton, Mr. Robert J. Bulkley and Mr. Arthur G. Logan for petitioners, and by Mr. Harry S. Littman, Principal Attorney Federal Power Commission, and Mr. Harold Goodman, Special Assistant Prosecuting Attorney for Wayne County, Michigan, for respondents.

Thereupon, this cause was submitted to the Court on the printed record and briefs of counsel filed herein.

[fol. 7200] (Order for Resubmission of Case to United States Circuit Court of Appeals.)

January Term, 1944.

Wednesday, January 12, 1944.

The case above entitled was argued and submitted to this Court at the May, 1943, Term at St. Paul, Minnesota. Decision was deferred pending a determination by the Supreme Court of the United States of the cases of Federal Power Commission, City of Akron and Pennsylvania Public Utility Commission vs. Hope Natural Gas Company; and City of Cleveland vs. Hope Natural Gas Company. Those cases have now been decided by that court. In view of the opinion of the Supreme Court in those cases, the division of this Court which heard this case considers that it is desirable that the case be resubmitted upon supplemental briefs and argument.

It is therefore ordered that the petitioners shall have until February 15, 1944, to file supplemental brief or briefs, that the respondents shall have until March 6, 1944, to file answering briefs, and that the petitioners shall have

until March 16 1944, to reply thereto. It is further ordered that this case be set down for argument on March 17, 1944, at Kansas City, Missouri, before the same division of this Court to which it was originally submitted.

January 12, 1944.

[fol. 7201] (Order resetting case for argument at Kansas City, Mo., on March 13, 1944.)

January Term, 1944.

Thursday, January 27, 1944.

This cause has heretofore been set down for argument on March 17, 1944, at Kansas City, Missouri, and it now appearing that the date of hearing should be changed, the case is now set for argument on Monday, March 13th, 1944, at Kansas City, Missouri, at ten o'clock in the forenoon. Briefs may be filed within the times provided for in the Order made by this Court January 12, 1944.

January 27, 1944.

[fol. 7202] (Order of Resubmission.)

March Term, 1944.

Monday, March 13, 1944.

This cause came on this day for reargument, in pursuance of the orders heretofore entered by this Court, and after hearing Mr. D. H. Culton for petitioners, Mr. Harry S. Littman, Assistant General Counsel, Federal Power Commission, for respondent, Mr. Harold Goodman, Special Assistant Prosecuting Attorney, for respondent Wayne County, Michigan, and Mr. John S. L. Yost for petitioners, this cause is thereupon taken by the Court as resubmitted on the record and briefs filed herein. Leave granted to respondent Federal Power Commission to hereafter file memorandum in response to petitioners' reply brief on reargument.

[fol. 7203] (Opinion.)

United States Circuit Court of Appeals
Eighth Circuit.

No. 12,466

Panhandle Eastern Pipe Line Company, a corporation, Illinois Natural Gas Company, a corporation, and Michigan Gas Transmission Corporation, a corporation,

Petitioners,

vs.

Federal Power Commission, City of Detroit, Michigan, County of Wayne, Michigan, Michigan Consolidated Gas Company, a corporation, and Michigan Public Service Commission,

Respondents.

On Petition to Review and Set Aside Order of Federal Power Commission.

[June 6, 1944]

Mr. D. H. Culton, Mr. Robert J. Bulkley, Mr. Arthur G. Logan, and Mr. John S. L. Yost (with whom Mr. Glenn W. Clark and Mr. Ira Lloyd Letts were on the briefs) for petitioners.

Mr. Harry S. Littman, Assistant General Counsel, Federal Power Commission, and Mr. Harold Goodman, Special Assistant Prosecuting Attorney, County of Wayne, Michigan, (with whom Mr. Charles V. Shannon, Gen-

eral Counsel, Federal Power Commission, Mr. Robert L. Russell, Attorney, Federal Power Commission, Mr. Paul E. Krause, Corporation Counsel, City of Detroit, Michigan, Mr. James H. Lee, Assistant Corporation Counsel, City of Detroit, Michigan, Mr. William E. Dowling, Prosecuting Attorney, County of Wayne, Michigan, and Mr. Park Chamberlain, Mr. Henry A. Montgomery and Mr. A. V. McRee, counsel for respondent Michigan Consolidated Gas Company, were on the briefs) for respondents.

Before SANBORN, WOODROUGH, and RIDDICK, Circuit Judges.

SANBORN, Circuit Judge, delivered the opinion of the Court.

The petitioners, pursuant to §19(b) of the Natural Gas Act,[1] seek a review and reversal of an interim rate reduction order made by the Federal Power Commission on September 23, 1942. The case was argued and submitted at the May, 1943, term of this Court. Decision was deferred awaiting the determination by the Supreme Court of the United States of the cases of *Federal Power Commission, et al.* v. *Hope Natural Gas Company*, and *City of Cleveland* v. *Hope Natural Gas Company*. After the opinion in those cases was rendered (January 3, 1944, 320 U.S. 591) a resubmission of the instant case at the March, 1944, term of this Court, upon supplemental briefs and a reargument, was ordered, so that we might have the benefit of the views of counsel as to the impact of the opinion of the Supreme Court in the Hope Natural Gas Company cases upon the questions here involved.

The petitioners are Panhandle Eastern Pipe Line Company and its wholly owned subsidiaries, Illinois Natural Gas Company and Michigan Gas Transmission Corpora-

[1] Act of June 21, 1938, c. 556, 52 Stat. 821, 831; 15 U.S.C.A. §717r(b).

tion. Their separate holdings constitute a single system for the gathering, transportation, and sale of natural gas, and appropriately may be regarded and referred to as though jointly owned and operated by the petitioners. The respondents are Federal Power Commission, City of Detroit, Michigan, County of Wayne, Michigan, Michigan Consolidated Gas Company, and Michigan Public Service Commission.

The petitioners gather, through production and purchase, natural gas in the Amarillo gas field of the Texas Panhandle and in the Hugoton gas field in southwestern Kansas. This gas is transported to markets through a main transmission pipeline which extends for a distance of about 860 miles from a point in Moore County, Texas, across the states of Oklahoma, Kansas, Missouri and Illinois, to a point near Dana, Indiana, close to the Illinois-Indiana boundary, where the line connects with a transmission pipeline extending from Dana, Indiana, to a point near Zionsville, Indiana, where the line branches. One branch runs to Detroit, Michigan, and the other to Muncie, Indiana. Lateral pipelines extend from petitioners' main transmission line in Illinois. Through their system of pipelines, natural gas is marketed by the petitioners, mainly for resale, in Texas, Kansas, Missouri, Illinois, Indiana, Michigan, and Ohio. The petitioners serve more than 200 communities and upwards of 700,000 consumers of gas and have the longest natural gas pipeline in existence.

On February 28, 1941, the City of Detroit and the County of Wayne, Michigan, filed a petition with the Federal Power Commission, asserting that the rates and charges of petitioners Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Corporation for natural gas sold to Michigan Consolidated Gas Company, for resale in that City and County, were unjust, unreasonable and unduly discriminatory. On May 22, 1941, the Commission, of

its own motion, instituted an investigation of the wholesale rates and charges of those two petitioners for natural gas. The investigation was later enlarged to include the Illinois Natural Gas Company. The two proceedings before the Commission, known as Docket No. G-200 and Docket No. G-207, were consolidated for hearing. The Michigan Consolidated Gas Company and the Michigan Public Service Commission were permitted to intervene. The hearing was begun on July 15, 1941, before a trial examiner, and continued from time to time thereafter until April 23, 1942. More than 10,000 pages of testimony was taken, and more than 250 exhibits were received in evidence.[2]

On April 23, 1942, the trial examiner adjourned the hearing pending the disposition of motions filed by counsel for the Federal Power Commission and by the City of Detroit, the County of Wayne, and Michigan Consolidated Gas Company for an interim order directing a reduction of petitioners' rates pending further hearing and investigation. It appears that the complainants before the Commission were contending that petitioners' rates should immediately be reduced by $6,800,479 per annum, and that counsel for the Commission and the Michigan Consolidated Gas Company were urging a rate reduction of approximately $5,500,000 per annum.

The Commission filed its opinion on September 23, 1942. It took the year 1941 as the appropriate test period. It found that the "Actual Cost of Gas Plant in Service at

[2] In describing the hearing, the Commission in its opinion states:

"The complainants [City of Detroit and County of Wayne, Michigan] offered one witness in support of their petition. The respondents [petitioners in this Court] offered 24 witnesses who presented a complete rate case including, among other matters, evidence of operations, revenues, expenses, book cost and original cost of their properties, 'going concern value,' working capital, gas reserves, depreciation, rate of return, future capital expenditures and allocation of costs. Counsel for the Commission called 5 witnesses whose testimony related principally to depreciation, a write-up, historical earnings on average net investment, working capital, rate of return, and allocation of costs. The interveners [Michigan Public Service Commission and Michigan Consolidated Gas Company] presented no witnesses. The witnesses were tendered to all parties for cross-examination and full opportunity was given to present rebuttal evidence."

December 31, 1941," was $78,814,292; that accrued depreciation was $12,596,987; that the actual cost less accrued depreciation was $66,217,305. To this amount the Commission added $920,000 for working capital; and this produced a rate base of $67,137,305. The Commission determined that a fair annual rate of return was 6½% of that amount, or $4,363,920; that the net operating revenue of petitioners for 1941 ("Available for Return") was $9,458,309, which was $5,094,384 in excess of the return found by the Commission to be reasonable. The Commission concluded that to that extent the rates and charges of petitioners were unjust, unreasonable, unlawful, and violative of the provisions of the Natural Gas Act. The order of the Commission, filed September 23, 1942, required that:

"The rates and charges made, demanded, or received by the respondents [petitioners here] for or in connection with their transportation and sale of natural gas in interstate commerce for resale for ultimate public consumption shall be so reduced as to reflect, when applied to respondents' [petitioners'] 1941 transportation and sales, a reduction of not less than $5,094,384 per annum below their 1941 consolidated gross operating revenues of $17,789,573; . . ."

The petitioners contend that the order of the Commission is invalid because: (1) The trial examiner excluded relevant and material evidence of the value of their property; (2) the Commission erred in assuming jurisdiction over the petitioners' production and gathering of natural gas; (3) the Commission erred in assuming jurisdiction over the petitioners' revenues from direct sales of gas to customers for their own use; (4) the return allowed by the Commission is unjust, unreasonable and confiscatory.

These contentions will be considered in their order.

1.

The petitioners state that the evidence offered by them and rejected by the trial examiner showed that the present

reproduction or replacement cost of Panhandle Eastern's physical properties as of June 30, 1941, less observed and determined depreciation, was $7,892,174 greater than original cost less book reserves; that the present reproduction cost of the physical properties of the Michigan Gas Transmission Corporation, similarly ascertained, was $2,933,808 in excess of actual cost less book reserves; and that Panhandle Eastern's leaseholds have a present market value $7,384,626 greater than the net investment therein as shown by its books. The rejected evidence tended to establish a reproduction cost or replacement value, less observed depreciation, for all of the petitioners' property of $83,957,083.

The ruling of the trial examiner excluding this evidence was approved by the Commission in its opinion of September 23, 1942. The reasons given by the Commission for its approval of the exclusion of the evidence of reproduction cost are, in substance: that §6(a) of the Natural Gas Act [15 U.S.C.A. §717e(a)] provides that "The Commission may investigate and ascertain the actual legitimate cost of the property of every natural-gas company, the depreciation therein, and, when found necessary for rate-making purposes, other facts which bear on the determination of such cost or depreciation and the fair value of such property;" that there is no need for estimating the cost of petitioners' property; that petitioners' cost records are accurate, complete and properly maintained; that their plant was constructed in recent years and there is no difficulty in ascertaining from petitioners' books the actual legitimate cost of or investment in their property; that the Commission has held that reproduction cost evidence is inherently fallacious and should be disregarded under the statute; that the defects of such evidence have been pointed out by the Supreme Court of the United States; that it seems evident that Congress recognized the fallacy of the reproduction cost doctrine and sought by the enactment of

§6(a) to do away with that concept of rate-making; that the Supreme Court, in *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U.S. 575, 586, said:

"The Constitution does not bind rate-making bodies to the service of any single formula or combination of formulas. Agencies to whom this legislative power has been delegated are free, within the ambit of their statutory authority, to make the pragmatic adjustments which may be called for by particular circumstances;"

that, in a concurring opinion in that case, Justices Black, Douglas, and Murphy said (p. 606 of 315 U.S.):

"As we read the opinion of the Court, the Commission is now freed from the compulsion of admitting evidence on reproduction cost or of giving any weight to that element of 'fair value.' The Commission may now adopt, if it chooses, prudent investment as a rate base — the base long advocated by Mr. Justice Brandeis. And for the reasons stated by Mr. Justice Brandeis in the Southwestern Bell Telephone case [*Southwestern Bell Telephone Co.* v. *Public Service Commission*, 262 U.S. 276], there could be no constitutional objection if the Commission adhered to that formula and rejected all others;"

that the Commission has been authorized by Congress to determine in the first instance the actual legitimate cost of utility properties and the depreciation therein; that the rate base is such cost less existing depreciation, plus necessary working capital; that it is certain from the record that no necessity exists requiring consideration of other facts in determining a rate base in these proceedings.

The petitioners assert that the power granted to the Commission under the Natural Gas Act to reduce rates can be exercised only if the Commission, after a full and fair hearing, shall determine that existing rates are unjust, unreasonable, unduly discriminatory or preferential [§5(a) of the Act; 15 U.S.C.A. §717d]; that the duties of the Commission are of a quasi judicial character; that it must receive and consider any evidence that might or could be

determined by a fair-minded person to be material in reaching a determination of the ultimate fact, namely, a fair price for the commodity sold or the service rendered; that, in determining the just and reasonable return to be allowed, any and all evidence which is relevant must first be admitted and considered.

Apparently no court has as yet ruled that the Federal Power Commission may, in a rate hearing, refuse to receive and consider evidence of replacement or reproduction cost of the properties of a company subject to the Natural Gas Act. It was held, in effect, in the case of *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U.S. 575, 586, 606-607, and in the *Hope Natural Gas Company* cases, 320 U.S. 591, 602-605, that the Commission was not bound to give weight to such evidence in determining rates.

Nevertheless, the question whether the refusal of the Commission to receive the evidence of reproduction or replacement cost or value offered by the petitioners amounted to a denial of due process is not free from doubt. That §6(a) of the Natural Gas Act authorizes the Commission to reject evidence which it regards as not "necessary for rate-making purposes" is questionable. There is little to indicate that Congress, in enacting §6(a), intended to change the law of evidence. That section apparently relates to the investigation and ascertainment by the Commission of material facts relevant to the question of "fair value", and probably has no controlling effect upon the admissibility of evidence at a rate hearing.

In *Donnelly Garment Co.* v. *National Labor Relations Board*, 8 Cir., 123 F.2d 215, 224, this Court said:

"That a refusal by an administrative agency such as the National Labor Relations Board to receive and consider competent and material evidence offered by a party to a proceeding before it, amounts to a denial of due process is not open to debate."

And:

"• • • That the Board would or might have reached no different conclusion had the rejected evidence been received, is entirely beside the point. The truth is that a controversy tried before a court or before an administrative agency is not ripe for decision until all competent and material evidence proffered by the parties has been received and considered."

This is a correct statement of the law. The respondents do not contend to the contrary, but deny the applicability of the rule in the instant case. The evidence rejected in the Donnelly Garment Company case was competent, relevant and material. It bore directly upon the issue being tried by the National Labor Relations Board, namely, whether an independent union of the employees of the Donnelly Garment Company was company-dominated or not. The basis for rejecting the evidence in that case was, in substance, that it was not worthy of belief and would not be credited.

The case of *Pittsburgh Plate Glass Co.* v. *National Labor Relations Board*, 313 U.S. 146, indicates that the rejection of relevant evidence by an administrative agency does not always constitute a denial of due process. In that case the question before the Board was whether all of the employees at all of the plants of the Glass Company constituted an appropriate unit for collective bargaining or whether the employees at the Crystal City plant of the company, who had an independent union of their own and wanted to have their own bargaining representative, should be considered a separate unit. The Board determined to disregard the wishes of the employees at the Crystal City plant, and excluded evidence thereof. The Board had a wide discretion with respect to the selection of the appropriate unit for the purposes of collective bargaining. The Glass Company contended that, in rejecting relevant evidence as to the wishes and situation of the employees at the Crystal City plant, the Board had denied a fair hearing. This

Court, on review of the Board's order, thought that, under the circumstances of that case, the rejection of the evidence did not amount to a denial of due process. *(Pittsburgh Plate Glass Co.* v. *National Labor Relations Board,* 8 Cir., 113 F.2d 698, 703.) The Supreme Court affirmed, saying (page 163 of 313 U.S.):

"Further, if we consider all the contentions about exclusion of evidence together instead of separately, we do not find that in the aggregate the evidence excluded could have materially affected the outcome on the 'appropriate unit' issue, in the light of the criteria by which the Board determined that issue."

Mr. Justice Stone, in expressing his dissent and that of Mr. Chief Justice Hughes and Mr. Justice Roberts, said in conclusion (page 177 of 313 U.S.):

"One of the most important safeguards of the rights of litigants and the minimal constitutional requirement, in proceedings before an administrative agency vested with discretion, is that it cannot rightly exclude from consideration facts and circumstances relevant to its inquiry which upon due consideration may be of persuasive weight in the exercise of its discretion. *Interstate Commerce Commission* v. *Chicago, R. I. & P. Ry. Co.*, 218 U.S. 88, 102; *St. Joseph Stock Yards Co.* v. *United States*, 298 U.S. 38, 75, 78; *Ohio Bell Telephone Co.* v. *Commission*, 301 U.S. 292, 304, 305."

The majority opinion of the Supreme Court in the Pittsburgh Plate Glass Company case indicates that where an administrative agency has authority to choose the criteria determinative of an issue of fact, it may reject evidence which has no materiality in view of the criteria adopted, and that, under those circumstances, the rejection of such evidence is not a denial of due process.

The Federal Power Commission is not bound "to the service of any single formula or combination of formulas" *(Federal Power Commission* v. *Natural Gas Pipeline Co., supra,* p. 586 of 315 U.S.) in fixing rates. It follows that the

Commission may, for rate-making purposes, select any permissible formula or combination of formulas which it considers appropriate under the circumstances. While one may reasonably believe that the Commission should in any case receive all evidence which is relevant and material under any theory of rate making, we think it cannot be said, in view of the majority opinion in the Pittsburgh Plate Glass Company case (313 U.S. 146), that the rejection of evidence of reproduction cost or of market or replacement value in the case before us amounted to a denial of due process requiring a remand of the proceeding to the Commission. It is, of course, apparent from the opinion of the Commission that the remand of this proceeding so that the evidence offered and rejected might be received, considered, and then disregarded by the Commission, would be a useless formality. The Commission has stated that it regards such evidence as valueless under the circumstances of this case, and considers that the legitimate cost or prudent investment formula is alone applicable. While the importance of requiring administrative agencies to observe the minimal requirements of due process cannot be over-emphasized, practical considerations are not to be completely ignored in determining whether a case shall be remanded, where the rights of a party have not been prejudiced by the rejection of evidence which, though admissible, is immaterial in the light of permissible criteria adopted by an agency for determining the issue before it. Moreover, for the purpose of review, this Court may assume that the proffered evidence, if admitted, would have proved all that the petitioners claim for it, namely, that the reproduction cost of their property, less observed depreciation, on June 30, 1941, was $83,957,083.

2.

The second question is whether the Commission erroneously assumed jurisdiction over the petitioners' production and gathering of natural gas.

Section 1(b) of the Natural Gas Act [15 U.S.C.A. §717(b)] reads:

"The provisions of this Act shall apply to the transportation of natural gas in interstate commerce, to the sale in interstate commerce of natural gas for resale for ultimate public consumption for domestic, commercial, industrial, or any other use, and to natural-gas companies engaged in such transportation or sale, but shall not apply to any other transportation or sale of natural gas or to the local distribution of natural gas or to the facilities used for such distribution or to the production or gathering of natural gas."

The basis for the petitioners' assertion that the Commission unlawfully exercised jurisdiction over their facilities used in the production of natural gas seems to be that the inclusion in the rate base of the depreciated book cost of such facilities, instead of their present enhanced market value, was erroneous and amounted to an abuse of power.

Petitioners claimed before the Commission, and offered to prove, that leaseholds which were carried on their books at less than $1,000,000 had a market value of about $8,400,000. In their reply brief on reargument, petitioners concede the right of the Commission to value their production property, but state that.—

"Their objection to the Commission's procedure is that it refused to admit *evidence from which such a valuation could have been made.* Having refused to admit that evidence, it erred in entering an order which, in effect, limits petitioners' earnings from their production and gathering properties to a return far below that which would have resulted had the Commission determined the value of the gas through a consideration of the present value of petitioners' production and gathering properties. The entering of this arbitrary order after the exclusion of evidence from which the *value* of the gas at the point where it enters the interstate pipe line could have been determined necessarily constituted an exercise of jurisdiction over produc-

tion and gathering, a jurisdiction expressly withheld from the Commission."

That is saying, in effect, that the jurisdiction of the Commission extends to making a valuation of petitioners' gathering and production facilities, for rate-making purposes, provided that the Commission does not use a method or apply a formula which results in an underestimate of the value of the gas produced. If there is an infirmity in the Commission's determination of the amount which should be included in the rate base as the cost or value of such facilities, we think the infirmity arises from the method used in making the valuation, and not from any lack of jurisdiction. Since the Commission was not obliged to adopt reproduction or replacement cost in determining "fair value" for rate-making purposes, but could adopt the actual cost or prudent investment formula as a basis, it is impossible for us to say that the Commission exceeded its power in not including in the rate base the present market value of petitioners' leaseholds. The Commission could, no doubt, have increased the rate base by the enhancement in market value of the leaseholds, but we think it was not compelled to do so.

3.

The third question is whether the order is invalid because of the Commission's failure to make an allocation or segregation of revenues derived from direct sales of gas to customers for their own use.

Concededly, the Commission has not fixed the petitioners' rates for such sales, and has only prescribed reduced rates for interstate sales of natural gas for the purpose of resale. The petitioners assert, however, that the necessary effect of the Commission's order is to reduce their rates and revenues on all sales and to deprive them of substantial profits from direct sales, and amounts to an as-

sumption of jurisdiction over a part of their business which the Commission may not regulate.

The reasons given by the Commission for declining to make an allocation or segregation of revenues are that the direct sales are made to 19 industrial customers on an interruptible basis, and at prices fixed by competition with other fuels; that no plant capacity has been provided for the direct industrial customers; that deliveries to them are made only when there is excess capacity not required by wholesale customers; that $128,848 of the entire investment in plant (less than one-sixth of one per cent) is used exclusively in the service of the direct sales; that petitioners treat their entire business as a unit and make no segregation of costs or profits as between the two classes of sales; that the incidental direct industrial business of petitioners is in reality a by-product of the wholesale business, comparable to the petitioners' gasoline extraction business; and that there is no showing that the direct sales are so distinct and separate from the general wholesale business that the two cannot be considered together.

The respondents deny that an allocation or segregation of the revenues and expenses attributable to direct sales would have materially affected the result or that the Commission's order reduces the petitioners' income from direct sales. The respondents contend that the order of the Commission gives the petitioners more than the return on direct sales which they contended in their evidence they were entitled to receive. The petitioners, however, assert that the order of the Commission takes from them approximately one-half of the revenue of $1,000,828 a year derived from direct sales.

The record indicates that the 1941 revenue of petitioners from direct industrial sales less expenses, but before Federal income taxes, was $1,000,828; that a fair allocation of

this revenue would be to treat one-half of it as derived from direct sales; and that the net amount properly attributable to that nonregulated portion of the business would be $319,656 ($500,414 return less $180,758 income taxes at 1941 tax rates). Under the Commission's order, the petitioners are allowed a 6½% return ($4,363,925) on their entire business. Under the method of allocation proposed by an expert witness of the Commission, $4,017,878 of the return would be attributable to sales at wholesale (subject to regulation), and $346,047 to direct industrial sales (not subject to regulation). There is in the record a substantial basis for the Commission's conclusion that, in determining reasonable rates for sales of natural gas subject to regulation, it was unnecessary to make a segregation of revenues attributable to sales not subject to regulation, and that, if a segregation had been made, it would not materially have affected the result.

In determining whether the wholesale rates of a natural-gas company subject to the Act are unreasonable, the Commission is, no doubt, obligated to give appropriate consideration to the fact that the revenues of the company derived from direct sales to customers are not subject to regulation. A failure of the Commission to give appropriate effect to that fact, unless arbitrary or capricious, does not, we think, deprive the Commission of its jurisdiction to make a rate order with respect to sales which are subject to regulation. Jurisdiction to decide a doubtful question of fact includes jurisdiction to decide it either correctly or incorrectly. *Pittsburgh Plate Glass Co.* v. *National Labor Relations Board*, 8 Cir., 113 F.2d 698, 701. The adjustments made necessary by reason of the fact that certain of the sales and revenues of the petitioners are not subject to regulation are, we think, "pragmatic adjustments * * * called for by particular circumstances" (*Federal Power Commission* v. *Natural Gas Pipeline Co.*,

315 U.S. 575, 586), which the Commission has power to make.

4.

The last question for consideration is whether the return allowed by the Commission has been shown to be unjust, unreasonable or confiscatory.

The opinion of the Supreme Court in the Hope Natural Gas Company cases indicates to us that, aside from questions relating to procedural due process and to jurisdiction, a reviewing court may interest itself only in the effect of the Commission's order. The court cannot concern itself with the Commission's choice of formulae or the propriety of the methods employed by it in reaching its conclusion, but only with the consequences of the order made. If the effect of the order is to deny to the utility a return sufficient reasonably to meet its necessities and to enable it to continue to render adequate public service, the order is arbitrary and confiscatory and may be set aside. It seems apparent that the Supreme Court is presently of the opinion that, within broad limits, the Federal Power Commission should be freed from judicial interference in regulating rates of natural-gas companies. It is evidently no longer necessary for a reviewing court to consider many of the doubtful and debatable questions which ordinarily arise in every rate case, such as: Whether replacement or reproduction cost less observed depreciation, or prudent investment, or historical cost, shall be used as a rate base; whether proper allocation of revenues which are subject to regulation and revenues which are not subject to regulation has been made by the Commission; whether the cost or value of items of property which, for reasons deemed sufficient by the Commission, have been excluded by it from the rate base should have been included; whether the Commission has given due consideration to every

pertinent fact; and whether the reasoning of the Commission which underlies its final determination is sound or unsound.[3]

The order of the Commission must be affirmed unless the petitioners have made a convincing showing that it is unreasonable in its consequences because the return allowed is insufficient to enable them to meet their expenses of operation, to pay interest on their bonds and dividends on their stock, to maintain their credit, and to attract capital, or is clearly out of line with the returns on investments in enterprises involving comparable risks.

In the Hope Natural Gas Company cases, original investment or actual cost had been estimated at about $70,000,000, of which $17,000,000 had been charged to operating expenses. The Commission found "actual legitimate cost" to be $51,975,416. From this it deducted $22,328,016 for depletion and depreciation. It added $1,392,021 for future net capital additions, $566,105 for

[3] In *Federal Power Commission* v. *Hope Natural Gas Co.*, 320 U.S. 591, 602-603, the Supreme Court said:

"We held in *Federal Power Commission* v. *Natural Gas Pipeline Co.*, *supra* [315 U.S. 575], that the Commission was not bound to the use of any single formula or combination of formulae in determining rates. Its rate-making function, moreover, involves the making of 'pragmatic adjustments.' Id., p. 586. And when the Commission's order is challenged in the courts, the question is whether that order 'viewed in its entirety' meets the requirements of the Act. Id., p. 586. Under the statutory standard of 'just and reasonable' it is the result reached not the method employed which is controlling. Cf. *Los Angeles Gas & Electric Corp.* v. *Railroad Commission*, 289 U.S. 287, 304-305, 314; *West Ohio Gas Co.* v. *Public Utilities Commission* (No. 1), 294 U.S. 63, 70; *West* v. *Chesapeake & Potomac Tel. Co.*, 295 U.S. 662, 692-693 (dissenting opinion). It is not theory but the impact of the rate order which counts. If the total effect of the rate order cannot be said to be unjust and unreasonable, judicial inquiry under the Act is at an end. The fact that the method employed to reach that result may contain infirmities is not then important. Moreover, the Commission's order does not become suspect by reason of the fact that it is challenged. It is the product of expert judgment which carries a presumption of validity. And he who would upset the rate order under the Act carries the heavy burden of making a convincing showing that it is invalid because it is unjust and unreasonable in its consequences. Cf. *Railroad Commission* v. *Cumberland Tel. & T. Co.*, 212 U.S. 414; *Lindheimer* v. *Illinois Bell Tel. Co.*, *supra* [292 U.S. 151] pp. 164, 169; *Railroad Commission* v. *Pacific Gas & Electric Co.*, 302 U.S. 388, 401.

"The rate-making process under the Act, i. e., the fixing of 'just and reasonable' rates, involves a balancing of the investor and the consumer interests.

useful unoperated acreage, and $2,125,000 for working capital. This produced a rate base of $33,712,536, which was about one-half of the amount claimed by the company to have been actually invested, and was also about one-half of estimated reproduction cost less depreciation. The allowed return of 6½% upon this rate base gave the Hope Natural Gas Company an annual return of $2,191,314, as compared with a return of $5,801,171 during the test year 1940.

In the instant case, petitioners assert that the "prudent investment" (as of December 31, 1941) upon which they were entitled to earn a fair return was at least $75,725,676. As already stated, the Commission found actual legitimate cost to be $78,814,292; deducted $12,596,987 for depreciation; and added $920,000 for working capital; producing a rate base of $67,137,305. The Commission declined to include in the rate base $4,944,820 invested in construction work in progress, and budget estimates of $6,372,100 to complete construction. The Commission found that the facilities under construction were to meet new demands for

---

Thus we stated in the Natural Gas Pipeline Co. case that 'regulation does not insure that the business shall produce net revenues.' 315 U.S. p. 590. But such considerations aside, the investor interest has a legitimate concern with the financial integrity of the company whose rates are being regulated. From the investor or company point of view it is important that there be enough revenue not only for operating expenses but also for the capital costs of the business. These include service on the debt and dividends on the stock. Cf. *Chicago & Grand Trunk Ry. Co.* v. *Wellman*, 143 U.S. 339, 345-346. By that standard the return to the equity owner should be commensurate with returns on investments in other enterprises having corresponding risks. That return, moreover, should be sufficient to assure confidence in the financial integrity of the enterprise, so as to maintain its credit and to attract capital. See *Missouri ex rel. Southwestern Bell Tel. Co.* v. *Public Service Commission*, 262 U.S. 276, 291 (Mr. Justice Brandeis concurring). The conditions under which more or less might be allowed are not important here. Nor is it important to this case to determine the various permissible ways in which any rate base on which the return is computed might be arrived at. For we are of the view that the end result in this case cannot be condemned under the Act as unjust and unreasonable from the investor or company viewpoint."

The court also said (page 605 of 320 U.S.)

"• • • Rates which enable the company to operate successfully, to maintain its financial integrity, to attract capital, and to compensate its investors for the risks assumed certainly cannot be condemned as invalid, even though they might produce only a meager return on the so-called 'fair value' rate base."

service to territory not already served by the petitioners, the revenues from which could not be estimated. The 6½% return allowed by the Commission gave petitioners a return of $4,363,925 annually over and above expenses of operation and allowances for depreciation, depletion, amortization, and taxes. The petitioners' long-term debt as of February 28, 1942, was $33,254,500. The annual interest cost upon it was determined to be 2.88%, or $957,730. The preferred stock outstanding was $16,000,000, and the dividend cost upon it was found to be 5.87%, or $939,200 annually. Therefore, the service cost on bonds and preferred stock is $1,896,930 per annum; leaving $2,466,995 as earnings for the comon stock. Petitioners have common stock outstanding to the amount of $20,184,175. The annual return upon common stock under the rates allowed by the Commission exceeds 12%. Petitioners, however, contend that they are entitled to at least a 12% return on their common stock and surplus, which together amount to $27,294,990. They state that unless they have such a return the common stock will not be attractive to purchasers. They argue that the least amount they should be allowed to earn upon common stock and surplus is $3,275,399, and that the return allowed by the Commission is about $800,000 short of being adequate. They also refer to the fact that sinking fund requirements and necessary additions to surplus will or may prevent adequate distributions of earnings to common stockholders.

It is, to say the least, doubtful that earnings of approximately $2,500,000 annually (9%) upon the common stock and surplus of petitioners — whether such earnings are distributed each year or accumulated — would make the petitioners' securities unattractive to purchasers. The evidence indicates that such a return compares not unfavorably with the returns upon similar investments involving comparable risks. In any event, there is nothing in the opinion in the Hope Natural Gas Company cases to

justify a belief that this Court could successfully substitute its judgment for that of the Commission with respect to the debatable question whether the return allowed the petitioners is sufficient to attract investors, or that we could invalidate the Commission's order upon the theory that the return allowed is obviously so unfair and inadequate as to be confiscatory.

Attention should be directed to the fact that the order complained of is not final and irrevocable. *Federal Power Commission* v. *Hope Natural Gas Co.*, 320 U.S. 591, 615. It must be assumed that if actual experience demonstrates that the rates as reduced by the Commission are unreasonably low, the Commission will allow the petitioners to increase their rates. This Court cannot presume that if either unreasonably low or unreasonably high interim rates are prescribed by the Commission, they will be perpetuated. We regard the order under review as a preliminary one made to cover a reasonable test period and subject to change by the Commission if experience shall prove that the rates fixed are either too low or too high.

Unless we have misconceived the teachings and implications of the opinion of the Supreme Court in the Hope Natural Gas Company cases, the standards by which the validity of the Commission's order is to be judged require its affirmance.

We shall, of course, retain jurisdiction over the funds which have been and are being impounded under the stay order which was granted by this Court to preserve the *status quo* pending the final determination of this case.

The mandate of this Court will be withheld for sixty days to allow the petitioners to apply to the Supreme Court for certiorari. If certiorari is applied for within that time, the mandate will be retained until the applica-

tion is ruled upon, and, if it is granted, until the case is finally determined.

The order of the Commission is affirmed.

RIDDICK, Circuit Judge, dissenting.

I agree with the result reached by the majority on all points decided except on the question concerning the refusal of the Commission to make an allocation as between the interstate sales and transportation of petitioners, subject to the Commission's jurisdiction, and their interstate sales and transportation beyond the jurisdiction of the Commission. Heretofore, the Commission has recognized the necessity of such an allocation and has made it. *Re Interstate Natural Gas Co., Inc.*, 48 PUR (NS) 267, 279; *Re Canadian River Gas Co., et al.*, 43 PUR (NS) 205, 231; *Re Cities Service Gas Co.*, 50 PUR (NS) 65, 89. That a separation of transactions within and beyond the jurisdiction of the Commission is required by the Natural Gas Act, and must be made in order that "regulation may be confined to its permitted field" is held in *Colorado Interstate Gas Co.* v. *Federal Power Commission*, 10 Cir., decided May 16, 1944. Here the Commission has admittedly refused to observe the limit upon its jurisdiction, fixed by Congress. In this situation it seems to me idle to inquire whether the Commission's order, call it a "pragmatic adjustment" or what-not, does or does not result in confiscation of petitioners' property, or whether it is less or more favorable to petitioners than would have been the case had the Commission confined itself to its permitted field. It is enough to require a remand of this proceeding that the Commission has exceeded the statutory limitation on its powers.

[fol. 7226] (Judgment.)

United States Circuit Court of Appeals
Eighth Circuit.

May Term, 1944.

Tuesday, June 6, 1944.

Panhandle Eastern Pipe Line Company, a corporation, Illinois Natural Gas Company, a Corporation, and Michigan Gas Transmission Corporation, a Corporation, Petitioners,

No. 12466 vs.

Federal Power Commission, City of Detroit, Michigan, County of Wayne, Michigan, Michigan Consolidated Gas Company, a Corporation, and Michigan Public Service Commission.

On Petition to Review and Set Aside Order of Federal Power Commission.

This cause came on to be heard on the petition to review and set aside the order of the Federal Power Commission dated September 23, 1942, as amended October 12, 1942, and was argued by counsel.

On Consideration Whereof, It is now here Ordered and Adjudged by this Court that the order of the Federal Power Commission in this cause be, and the same is hereby, affirmed without taxation of costs in this Court in favor of either of the parties.

It is further Ordered by this Court that jurisdiction over the funds which have been and are being impounded under the stay order which was granted by this Court to [fol. 7227] preserve the status quo pending the final determination of this case be, and is by the Court hereby, retained.

And it is further Ordered by this Court that issuance of mandate in this cause be withheld for a period of sixty days from and after this date to allow the petitioners to apply to the Supreme Court of the United States for a writ of certiorari. If certiorari is applied for within that

time the mandate will be retained until the application is ruled upon, and, if it is granted, until the case is finally determined.

June 6, 1944.

E. E. KOCH,
Clerk of the United States Circuit Court of Appeals for the Eighth Circuit.

[fol. 7230] SUPREME COURT OF THE UNITED STATES

ORDER ALLOWING CERTIORARI—January 3, 1945

On Petition for Writ of Certiorari to the United States Circuit Court of Appeals for the Eighth Circuit.

A motion for leave to file a petition for rehearing and petition for rehearing having been submitted in this case to enlarge the scope of review.

Upon consideration thereof, it is ordered by this Court that the motion for leave to file and petition for rehearing be, and the same are hereby, granted.

The order of November 13, 1944, granting certiorari is vacated. The petition for writ of certiorari herein is granted limited to questions 2 and 3 presented by the petition for the writ.

And it is further ordered that the duly certified copy of the transcript of the proceedings below which accompanied the petition shall be treated as though filed in response to such writ.

PANHANDLE EASTERN PIPE LINE COMPANY, ILLINOIS NATURAL GAS COMPANY, AND MICHIGAN GAS TRANSMISSION CORPORATION, PETITIONERS

v.

FEDERAL POWER COMMISSION, CITY OF DETROIT, COUNTY OF WAYNE, MICH., MICHIGAN CONSOLIDATED GAS COMPANY, AND MICHIGAN PUBLIC SERVICE COMMISSION, RESPONDENTS

PETITION FOR A WRIT OF CERTIORARI TO THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE EIGHTH CIRCUIT

To the Honorable the Chief Justice and the Associate Justices of the Supreme Court of the United States:

Panhandle Eastern Pipe Line Company, a Delaware corporation (herein referred to as "Panhandle Eastern"), Illinois Natural Gas Company, an Illinois corporation (herein referred to as "Illinois Natural"), and Michigan Gas Transmission Corporation, a Delaware corporation (herein referred to as "Michigan Gas"), pray that a writ of certiorari issue to review the judgment of the United States Circuit Court of Appeals for the Eighth Circuit entered in the above cause on June 6, 1944.

OPINIONS BELOW

The opinion of the court below (R. 7198) and the dissent thereto (R. 7218) filed June 6, 1944, are not yet officially reported. The opinion of the Federal Power Commission was entered September 23, 1942 (R. 14).

JURISDICTION

The judgment of the Circuit Court of Appeals was entered on June 6, 1944 (R. 7219). Jurisdiction of this Court is invoked under Section 240 (a) of the Judicial Code, as amended by the Act of February 13, 1925, and section 19 (b) of the Natural Gas Act.

STATUTE INVOLVED

The pertinent provisions of the Natural Gas Act, approved June 21, 1938 (52 Stat. 821; 15 U. S. C. 717), are set forth in the Appendix hereto (pp. 29-31).

QUESTIONS PRESENTED

(1) Whether the refusal of the Commission to receive evidence of reproduction or replacement cost and evidence of the value of petitioners' producing properties amounted to a denial of due process.

(2) Whether limiting the sale price of petitioners' gas for resale so as to provide an over-all return of 6½ per cent on the depreciated cost of petitioners' properties including those devoted to production and gathering of natural gas and excluding petitioners' tendered evidence as to the market value of petitioners' gas leaseholds constituted an exercise of jurisdiction over production and gathering of natural gas in violation of the Natural Gas Act.

(3) Whether the Commission's action in treating petitioners' business as an entirety and refusing to make any allocation or separation with respect to petitioners' regulated and unregulated sales was beyond its statutory power.

(4) Whether the return allowed by the Commission and affirmed by the court below is just and reasonable under the tests and standards established by this Court.

STATEMENT

On February 28, 1941, the City of Detroit and the County of Wayne, Michigan, filed a complaint before the Commission against petitioners, alleging that petitioners' rates and charges for natural gas sold to Michigan Consolidated Gas Company for resale in that City and County were unreasonable, unjust, and unduly discriminatory (R. 7002). The Commission, on its own motion, instituted an investigation of all wholesale natural gas rates and charges of petitioners (R. 7061). These proceedings were consolidated (R. 7064). After a lengthy hearing before the Commission's trial examiner, the Commission on September 23, 1942, entered its order upon such consolidated docket requiring petitioners to file new schedules of rates and charges for, or in connection with, their transportation and sale of natural gas in interstate commerce for resale for ultimate public consumption, so as to reflect, when applied to their 1941 transportation and sales, a reduction of not less than $5,094,384 per annum below their 1941 consolidated gross operating revenues of $17,789,573 (R. 38, 42). On October 30, 1942, petitioners' motion for rehearing and reconsideration, seasonably filed (R. 7141), was denied (R. 7150).

Thereupon, petitioners promptly filed in the United States Circuit Court of Appeals for the Eighth Circuit (in whose jurisdiction petitioners had their principal place of business) their petition for review of said order of the Commission (R. 1). On June 6, 1944, that court rendered the judgment review of which is sought here, affirming the order of the Commission (R. 7219).

The properties of petitioners, now owned by Panhandle Eastern[1], constitute a natural gas production, transportation and marketing system. The system produces and purchases gas from the Panhandle Field in Texas and from the Hugoton Field in Kansas, Oklahoma, and Texas. It extends from the Panhandle Field and the Hugoton Field through the states of Oklahoma, Kansas, Missouri, Illinois, Indiana, Ohio, and Michigan, with termini in Indiana, Ohio and Michigan. When the proceedings before the Commission were commenced, Michigan Gas, a wholly owned subsidiary of Columbia Gas and Electric Corporation, owned that portion of the then existing transmission system extending eastward from Dana, Indiana. Michigan Gas purchased its entire supply of natural gas from Panhandle Eastern and sold such gas to various distributing companies for resale. It also transported for the account of Panhandle Eastern gas sold by Panhandle Eastern directly to various distributing companies serving communities in Ohio and Michigan. Illinois Natural, a wholly owned subsidiary of Panhandle Eastern, owned the lateral lines in the State of Illinois extending from Panhandle Eastern's main line and purchased its entire supply of gas from Panhandle Eastern and sold such gas to distributing companies and industrial companies in Illinois (R. 17-18).

Most of the gas is sold to distributing companies for resale, but a very substantial quantity is sold direct to industrial customers. For the year 1941 direct sales represented 13.2% of all gas transported and sold. The revenue derived therefrom amounted to $1,500,527 (R. 5947, Ex. 251, L. 23, Col. F.).

---

[1] Panhandle Eastern purchased Michigan Gas February 6, 1942, and dissolved it March 31, 1943, after acquiring all of its properties. Illinois Natural, a wholly owned subsidiary of Panhandle Eastern, was dissolved March 31, 1943, after the latter acquired all of its properties.

At the hearing, petitioners caused to be identified and offered in evidence certain exhibits, and testimony relating thereto, which would have shown the present replacement or reproduction cost of their physical properties as of June 30, 1941, less observed depreciation, and the market value of petitioners' gas leaseholds. The Commission's trial examiner sustained a motion to strike and exclude the exhibits above referred to and all testimony in support thereof (R. 715-718; R. 3973-3975). At the time the evidence was tendered, counsel for petitioners made it clear that it was offered as being relevant not only to a determination of what rate base should be used and what rate of return should be applied but also to a determination of the present value of petitioners' property and to a determination of the return in dollars which they are justly and equitably entitled to receive (R. 715).

The evidence excluded would have shown that the reconstruction cost of the fixed physical properties of Panhandle Eastern, less observed depreciation, was $61,807,269[2] while the book cost of such properties less reserves for depreciation was $53,915,095[3], a difference of $7,892,174.

The excluded evidence would have shown that the present value of the physical properties of Michigan Gas, determined by deducting the observed depreciation from the

---

[2] The value of "fixed properties," $70,502,792, shown in excluded Exhibit 62, Col. D., L. 33,—R. 4347, included $8,695,524 as the market value of leases. Subtracting the latter item leaves $61,807,268 as the value of physical properties, determined by deducting the amount of observed depreciation from reproduction cost.

[3] The "gas plant classified" on that date stood at $64,622,148, and the "construction work in progress" at $383,556—a total of $65,005,704. This, however, included cost of leaseholds in the aggregate sum of $1,745,206, leaving $63,260,498 as the cost of physical properties (Exhibit 52—R. 4275-4277). On that date, depreciation reserves for physical properties amounted to $9,345,403 (Exhibit 48—R. 4261). The difference, $53,915,095, represents the book cost of physical properties, less reserves therefor.

trended original cost of June 30, 1941, was $13,810,092 (Ex. 84, R. 4851), while the "book cost" of such properties, less the reserves for depreciation, amounted to $10,876,284[4], a difference of $2,933,808.

The excluded evidence would have shown that the present value of Panhandle Eastern's leaseholds, as reflected in their market value, is $8,339,722 (Ex. 39, R. 4199, 4201, 492), while the book cost of such leaseholds, less reserves for depletion, amounted to $955,096 on that date[5], a difference of $7,384,626.

Thus, had this rejected evidence been received and considered and, upon consideration, been held to reflect the present value of petitioners' properties, the present value of such properties as of June 30, 1941, would have been found to be $18,210,608 in excess of the book cost of those properties less book accruals for depreciation and depletion.

Petitioners further offered an exhibit (R. 4726) showing a valuation made in 1937 of Panhandle Eastern's leaseholds and an exhibit (R. 4719) showing a valuation made in 1938 of Panhandle Eastern's physical properties. This valuation showed a total value of $63,248,549 (R. 4723), approximately $7,300,000 in excess of book cost less accruals for depreciation and depletion as of that date (Ex. 48, R. 4259, 4261). These exhibits and all evidence explanatory thereof were also excluded by the examiner. They would have shown a valuation of Panhandle Eastern's property at the time the Natural Gas Act became effective.

[4] The book cost was $12,402,884, and the depreciation reserve was $1,526,600 (Ex. 88, R. 4863-4864).

[5] Cost of leaseholds was $1,745,206 (Exhibit 52, p. 1, LL. 10 and 12—R. 4275), and reserves for depletion, etc. aggregated $790,110 (Exhibit 48, p. 2, LL. 10 and 33—R. 4261). These leaseholds were acquired through foresight and good judgment at low prices prior to a determination of the limits of the field and principally over a period from 1930 to 1932.

The Commission approved the trial examiner's action in striking all evidence of reproduction cost and value of leaseholds, both as of the time of enactment of the Natural Gas Act and as of the time of the hearing, basing its ruling upon its construction of the Natural Gas Act.[6]

Petitioners presented at the hearing a suggested basis for allocating earnings and cost of service between regulated and unregulated sales (R. 5947, Ex. 251; R. 3631-3676, 3857). The Commission's staff also presented a suggested allocation (R. 6883-6887, Ex. 263; R. 3994-4002). The Commission refused, however, to make any allocation, and treated petitioners' business as one subject to regulation in its entirety, saying (R. 34),

> We conclude, therefore, that, under such circumstances, it is not unreasonable to treat the entire business as a unit requiring no allocation as between the two classes of sales.

Panhandle Eastern commenced doing business as a going concern in 1932 with a capital structure of $49,278,869 (Ex. 48, p. 2, R. 4261). As of March 31, 1942, the invested capital of the system had been increased to $77,703,364, represented by (Ex. 267, R. 6993A)

Long term debt	$33,254,500
Preferred stock	16,000,000
Common stock and surplus	28,448,864
Total	$77,703,364

[6] The Commission in its opinion stated: "We held in the *Chicago District Electric Generating* case that under section 208(a) of the Federal Power Act (the provisions of which are identical with Sec. 6(a), supra) that reproduction cost evidence is inherently fallacious and should be disregarded under that statute." (R. 19). It may be observed that the Commission's opinion in the cited case, 39 P.U.R. (N.S.) 263, has never been reviewed by any Court.

In view of the Commission's criticism of certain capital items amounting to $1,153,874 petitioners herein eliminate those items and treat their unquestioned invested capital as of March 31, 1942, as being $76,549,490, and their common stock and surplus as being $27,294,990.

Petitioners are operating companies wholly dependent upon their own credit and resources in obtaining capital for growth and expansion (Ex. 147, R. 5107). Petitioners own no distribution companies, nor have they affiliations with the owners of any such companies.

Their equity capital comprises only approximately 35% of the corporate structure. The other securities, preferred stock and long term debt, have favorable interest rates (having been issued during the recent period of low service costs on debt capital), but contain burdensome sinking fund requirements, thus increasing the risk of the equity capital and restricting the payment of dividends to the equity stockholders (R. 6075, 6994). Panhandle Eastern paid no dividend on its equity capital until 1937 (Ex. 174, R. 5449).

Petitioners' evidence showed that they required a minimum return of $5,172,129 to provide adequate service costs on their capital structure, as follows:[7]

Cost of servicing long term debt	$ 957,730
Cost of servicing preferred stock	939,000
Cost of servicing common stock and surplus	3,275,399
Total	$5,172,129

The Commission found the reasonable cost of servicing the long term debt and preferred stock to be as stated above, but made no finding as to cost of servicing the equity

[7] These figures are derived from Ex. 267, R. 6993-A and Ex. 253, R. 6097, after deducting the items of invested capital aggregating $1,153,874 questioned by the Commission.

capital (R. 29). It did not fix the return allowed from a consideration of cost of service, but found that a "fair and liberal" return would be 6½% on the "rate base" selected by it (R. 30). This rate base was $67,137,305, which the Commission determined to be the actual legitimate cost of the plant in service (including leaseholds) at December 31, 1941, less accrued depreciation plus working capital of $920,000. It did not include petitioners' properties in the course of construction at December 31, 1941, which were completed and in service at March 31, 1942, before the hearing was closed, nor did it include any allowance for construction work in progress at the close of the hearing. The resulting return allowed was only $4,363,925 (R. 30), $808,204 less than petitioners' cost of servicing their unquestioned invested capital.

On review the court below, with one judge dissenting, affirmed the Commission's order on the following grounds: (1) The ruling of the trial examiner in excluding all evidence of the reproduction or replacement cost of Panhandle Eastern's properties and the market value of Panhandle Eastern's leaseholds was not a denial of due process. The court on this point stated that the action of the trial examiner presents a question not free from doubt, as the precise issue has not heretofore been decided; (2) The Commission had not erroneously assumed jurisdiction over petitioners' production and gathering of natural gas; (3) The Commission's failure to make an allocation or segregation of revenues derived from direct sales of gas to customers for their own use did not make its order invalid, and (4) The return allowed by the Commission was not shown to be unjust, unreasonable or confiscatory.

REASONS FOR GRANTING THE WRIT

1. *The question involved in the rejection by the Commission of the tendered evidence is of great public importance.*

The question of whether the lower court was right in upholding the Commission's exclusion of petitioner's evidence involves a constitutional issue of due process of broad and grave public interest. It is not a mere question of construing Section 6(a) of the Natural Gas Act, as the Commission visualized the issue, nor is it one of searching, as did the court below, for "teachings and implications" from decisions of this Court in cases wherein the issue was not involved.

In the case at bar the Commission at the threshold of its consideration excluded all evidence of reproduction cost and market value. The Commission in advance selected one formula for determining a rate base, barring all others and evidence germane thereto.

The question involved is what are the minimal requirements, as a matter of constitutional right, of a fair and full hearing before an administrative Commission with quasi-judicial authority.

Heretofore, courts have recognized that regulatory commissions are frequently manned by lay members less trained in a careful discrimination and appraisal of evidence as offered than the regularly constituted courts. These commissions have been consistently required as a minimal requirement of due process to afford parties in interest a full and complete hearing, to permit, within reasonable bounds, each party to present the full facts as he visualizes the issues involved. This course safeguards the interests concerned, restrains the regulatory commissions from arbitrary action based upon inadequate information and affords the reviewing court a sufficient presentation of all the facts to enable it to pass intelligently upon the resulting ruling both from the point of view of the public interest and the constitutional rights of the regulated enterprise or body.

This Court has many times placed its approval upon several criteria as *proper for consideration* for rate making purposes. This Court has held that the Commission is not bound in its final determination to adopt any one or any combination of approved formulas. Notwithstanding this background of the law the Commission in the instant case selected in advance of its consideration of the case one of the several such approved formulas and, receiving evidence consonant with it, rejected all other evidence offered by petitioners although having probative value in relation to other proper criteria.

The Commission did this on the theory that Section 6(a) of the Natural Gas Act amply supported it in so doing.

The court below disagreed with the Commission's interpretation of Section 6(a), saying:

> There is little to indicate that Congress in enacting § 6(a) intended to change the law of evidence. That section * * * probably has no controlling effect upon the admissibility of evidence at a rate hearing.

The court below, however, reached, in effect, the same result as the Commission and, in so doing, said:

> Unless we have misconceived the teachings and implications of the opinion of the Supreme Court in the Hope Natural Gas Company cases, the standards by which the validity of the Commission's order is to be judged require its affirmance.

The holding of the court below is not based upon any rule of statutory construction; it is prompted by that court's acceptance of a new and delimited concept of the "minimal requirements" of due process for a full and fair hearing.

The question involved is of great and far reaching public interest. It affects, or is likely to affect, procedure before

the increasing number of Federal regulatory bodies and commissions. The lower court's decision, being rested upon "teachings and implications" of opinions of this Court, if permitted to stand, would likewise have a far reaching effect as a precedent, though not binding, upon innumerable regulatory and rate making bodies of the several states. The judicial interpretation of the requirements of due process under the Constitution of the United States has consistently influenced the interpretation of like protective clauses in the constitutions of the various states.

No issue could more definitely be affected with a public interest than the question involved in the rejection by the Commission, affirmed by the court below, of the evidence tendered by petitioners.

2. *The question of whether the Commission may refuse to receive and consider in a rate hearing evidence of the character offered has never been decided by this Court.*

The precise question of whether the Commission may refuse to admit and consider evidence of the type offered by petitioners has never been decided by this Court. In a long line of decisions this Court has indicated that the rejection of evidence of probative value is violative of due process. *Morgan* v. *U. S.*, 298 U. S. 468; *Ohio Bell Telephone Company* v. *Public Utilities Comm.*, 301 U. S. 292; *Interstate Commerce Commission* v. *L. & N. R. R. Company*, 227 U. S. 88; *Los Angeles Gas & Electric Corp.* v. *R. R. Commission*, 289 U. S. 287; *Driscoll* v. *Edison Light & Power Co.*, 307 *U. S.* 104; *Bluefield Waterworks and Improvement Company* v. *Public Service Commission*, 262 U. S. 679. The Commission's affirmance of the trial examiner's action was based upon its construction of section 6(a) of the Natural Gas Act and upon a dictum in

the concurring opinion in *Federal Power Commission* v. *Natural Gas Pipe Line Company*, 315 U. S. 575, 606. No support is to be found for the Commission's position in any opinion of this Court. The court below stated (R. 7205):

> Apparently no court has as yet ruled that the Federal Power Commission may, in a rate hearing, refuse to receive and consider evidence of replacement or reproduction cost of the properties of a company subject to the Natural Gas Act. It was held, in effect, in the case of Federal Power Commission v. Natural Gas Pipe Line Co., 315 U. S. 575, 586, 606-607, and in the Hope Natural Gas Company cases, 320 U. S. 591, 602-605, that the Commission was not bound to give weight to such evidence in determining rates.
>
> Nevertheless, the question whether the refusal of the Commission to receive the evidence of reproduction or replacement cost or value offered by the petitioners amounted to a denial of due process is *not free from doubt*. (Italics ours.)

In the *Natural Gas Pipe Line* case, *supra*, the Commission, for the purpose of issuing an interim order, accepted the company's statement that the book cost of the property existing at the end of 1938 was $60,172,843, including working capital of $975,000. It also accepted the company's estimate that the value of all physical property calculated at reproduction cost new was $74,420,424. Evidence of reproduction cost was not only admitted but the Commission used it as the rate base. Clearly, the question presented here was not before this Court in that case. This Court stated at page 586:

> The Constitution does not bind rate-making bodies to the service of any single formula or combination of formulas. Agencies to whom this legislative power has been delegated are free, within the ambit of their statutory authority, to make the pragmatic adjust-

ments which may be called for by particular circumstances. Once a fair hearing has been given, proper findings made and other statutory requirements satisfied, the courts cannot intervene in the absence of a clear showing that the limits of due process have been over-stepped.

The Court did not state that the Commission might adopt at the outset a single formula and exclude all evidence not consistent with such formula; nor is such a view implicit in the Chief Justice's statement. If the Commission is free to exclude all evidence despite its probative value except evidence going to the question of original cost, then there is little room, indeed, within which it is called upon to make pragmatic adjustments based upon the peculiar facts of any rate case.

The Chief Justice stated at pages 585-586:

> By long standing usage in the field of rate regulation, the "lowest reasonable rate" is one which is not confiscatory in the constitutional sense. * * * Assuming that there is a zone of reasonableness within which the Commission is free to fix a rate varying in amount and higher than a confiscatory rate, * * * the Commission is also free under section 5(a) to decrease any rate which is not the "lowest reasonable rate."

There can be no doubt as to the Commission's wide discretion in the matter of fixing rates, but, clearly, the Commission, on the basis of the above statement, has authority to fix rates above the "lowest reasonable rate." This being true, the petitioners should have been given a full and fair hearing in order that they might produce evidence of probative value which might persuade the Commission to fix a rate higher than the lowest reasonable rate. The action of the Commission in the instant case amounts to a disregard of the oft repeated statement in the cases that rate-making

is a process of selection from all available data. It is in effect to prejudge a case before its hearing.

If Congress had intended that the Commission should adopt a single formula, it would have said so. Congress did not intend by section 6(a) to free the Commission from hearing evidence of fair value.

In the concurring opinion in the *Natural Gas Pipe Line* case, *supra*, it was stated at page 606:

> As we read the opinion of the Court, the Commission is now freed from the compulsion of admitting evidence on reproduction cost or of giving any weight to that element of "fair value." The Commission may now adopt, if it chooses, prudent investment as a rate base—the base long advocated by Mr. Justice Brandeis. And for the reasons stated by Mr. Justice Brandeis in the *Southwestern Bell Telephone* case there could be no constitutional objection if the Commission adhered to that formula and rejected all others.

Mr. Justice Jackson in his dissent in *Federal Power Commission et al* v. *Hope Natural Gas Company*, 320 U. S. 591, in reference to the above quoted statement, said, at page 628:

> The Minority opinion I understood to advocate the "prudent investment" theory as a sufficient guide in a natural gas case. The view was expressed in the court below that since this opinion was not expressly controverted it must have been approved. I disclaim this imputed approval with some particularity, because I attach importance at the very beginning of federal regulation of the natural gas industry to approaching it as the performance of economic functions, not as the performance of legalistic rituals.

This Court, in affirming the Commission in the *Hope* case, *supra*, and reversing the Circuit Court, did not lay down the rule that the Commission could reject all evidence ex-

cept that which might go to the determination of original cost. As noted, the Commission in that case admitted and considered evidence of reproduction cost and, thus, the question here presented was not before this Court.

Mr. Justice Reed dissenting on another ground stated, page 623:

> I agree with the Court in not imposing a rule of prudent investment alone in determining the rate base. This leaves the Commission free, as I understand it, to use any available evidence for its finding of fair value, including both prudent investment and the cost of installing at the present time an efficient system for furnishing the needed utility service.
>
> • • • • •
>
> The Federal Power Commission did not, as I construe their action, disregard its statutory duty. They heard the evidence relating to historical and reproduction cost and to the reasonable rate of return, and they appraised its weight. The evidence of reproduction cost was rejected as unpersuasive, but from the other evidence they found a rate base which is to me a determination of fair value. On that base the earnings allowed seemed fair and reasonable.

It is thus apparent that Mr. Justice Reed was of the opinion that the Commission in the *Hope* case had performed its satutory duty in permitting the introduction of evidence tending to show reproduction cost or present value.

The court below, in affirming the action of the Commission, stressed what it considered implications of this Court's opinion in *Pittsburgh Plate Glass Company v. National Labor Relations Board*, 313 U. S. 146. The issue in that case was not, however, the same as that in the case at bar. The point upon which this Court divided in the *Pittsburgh Plate Glass Company* case was not as to whether due process required the National Labor Relations Board to hear

evidence pertinent to a determination of the criteria to be adopted in selecting the appropriate bargaining unit. The point was whether the National Labor Relations Board had heard and considered evidence as to the appropriate unit and made a determination of the issue in a former proceeding which was binding upon all the parties to the subsequent proceedings. The *Pittsburgh Plate Glass Company* case is not authority for the Commission's action in the case at bar. Here, there had been no prior hearing but the Commission was in the initial stage of its rate-making process as applied to petitioners. The Commission, in order properly to exercise its wide discretion, was bound to admit petitioners' evidence regardless of the weight ultimately given to it.

It may be observed that Mr. Justice Reed, who wrote the opinion for the Court in the *Pittsburgh Plate Glass Company* case, recognized in his dissent in the *Hope* case that the Commission was required to hear evidence of reproduction cost or present value. It may also be noted that the present Chief Justice, with the then Chief Justice and Mr. Justice Roberts concurring, wrote a vigorous dissent in the *Pittsburgh Plate Glass Company* case, stating at page 177:

> One of the most important safeguards of the rights of litigants and the minimal constitutional requirement, in proceedings before an administrative agency vested with discretion, is that it cannot rightly exclude from consideration facts and circumstances relevant to its inquiry which upon due consideration may be of persuasive weight in the exercise of its discretion.

From the foregoing discussion, it is clear that the issue involved in the case at bar has never been decided by this Court. The public importance of the question warrants a final determination thereof.

3. *The decision of the court below is in conflict with a decision of the U. S. Circuit Court of Appeals for the Tenth Circuit.*

In the instant case the Commission treated petitioners' business as an entirety without making an allocation between property, capital and revenue related to direct sales and sales for resale. The Commission considered such an allocation or segregation unnecesary. It may be observed, however, that the revenue derived from direct sales constituted a substantial portion of petitioners' business. In 1941 direct sales represented 13.2% of all gas transported and sold. The revenue derived therefrom amounted to $1,500,527 (R. 5947).

Section 1(b) of the Natural Gas Act provides:

> The provisions of this Act shall apply to the transportation of natural gas in interstate commerce, to the sale in interstate commerce of natural gas for resale for ultimate public consumption for domestic, commercial, industrial, or any other use, and to natural-gas companies engaged in such transportation or sale, *but shall not apply to any other transportation or sale of natural gas or to the local distribution of natural gas or to the facilities used for such distribution or to the production or gathering of natural gas.* (Italics supplied.)

Judge Riddick, dissenting below, stated (R. 7218):

> Heretofore, the Commission has recognized the necessity of such an allocation and has made it. Re *Interstate Natural Gas Co., Inc.*, 48 PUR (NS) 267, 279; Re *Canadian River Gas Co.*, et al, 43 PUR (NS) 205, 231; Re *Cities Service Gas Co.*, 50 PUR (NS) 65, 89. That a separation of transactions within and beyond the jurisdiction of the Commission is required by the Natural Gas Act, and must be made in order that "regulation may be confined to its permitted field" is

held in *Colorado Interstate Gas Co.* v. *Federal Power Commission*, 10 Cir., decided May 16, 1944. Here the Commission has admittedly refused to observe the limit upon its jurisdiction, fixed by Congress. In this situation it seems to me idle to inquire whether the Commission's order, call it a "pragmatic adjustment" or what-not, does or does not result in confiscation of petitioners' property, or whether it is less or more favorable to petitioners than would have been the case had the Commission confined itself to its permitted field. It is enough to require a remand of this proceeding that the Commission has exceeded the statutory limitation on its powers.

In *Colorado Interstate Gas Co., et al.* v. *Federal Power Commission, et al.*, decided by the Circuit Court of Appeals for the Tenth Circuit May 16, 1944, cited by Judge Riddick, (not yet reported) the question of whether the Commission had made a proper allocation arose and the Court stated:

> Where, as here, a natural gas company is engaged in an integrated business, part of which is subject to regulation and part of which lies beyond the reach of the regulatory jurisdiction of the Commission, *some separation of the property, capital, and revenue is essential in order that regulation may be confined to its permitted field.* The separation may be appropriately effected by estimating or appraising the value of the property used in the regulated business and that used in the unregulated business. Smith v. Illinois Bell Telephone Co., 282 U. S. 133. But that method in its completeness is not always exclusive of others. The separation or allocation may be effected by application of any formula which makes the principle a working one suitably adapted to the particular circumstances. Columbus Gas & Fuel Co. v. Public Utilities Commission, supra. (Italics supplied.)

In that case, the Commission had made an allocation, although it was not in accordance with that contended for

by the Companies. In the case at bar, however, the Commission declined to make any allocation whatever, notwithstanding the evidence introduced by petitioners and by its own staff. (R. 3994-4002 and R. 5943-5955).

The question should be settled not only because of the conflict between the court below and the Tenth Circuit but also because a final determination by this Court is essential in order properly to delimit the authority of the Commission under the Act.

4. *The decision of the court below is in conflict with principles established by this Court and with specific statutory provisions of the Natural Gas Act.*

(a) The holding of the court below that it was not error for the Commission's trial examiner to exclude evidence of reproduction or replacement cost of petitioners' physical properties and the market value of their leaseholds is in conflict with decisions of this Court.[8]

It is petitioners' contention that evidence of the price at which the physical facilities can now be reproduced and the price at which certain of its properties can now be sold is relevant and material in determining the just and reasonable return which the regulated company is entitled to receive. Petitioners in the case at bar insisted that the Commission, exercising its discretion, could and should take into account the increased value which the proffered evidence would show exists in petitioners' physical properties and in the present value of the gas leaseholds when determining the return allowed, irrespective of the con-

[8] Morgan v. U. S. 298 U. S. 468; Ohio Bell Telephone Company v. Public Utilities Comm., 301 U. S. 292; Los Angeles Gas & Electric Corporation v. R. R. Commission, 289 U. S. 287; Driscoll v. Edison Light & Power Co., 307 U. S. 104; Bluefield Waterworks and Improvement Co. v. Public Service Commission, 262 U. S. 679.

sideration, if any, given such evidence in fixing the rate base. Petitioners' excluded evidence unquestionably constitutes "facts and circumstances which ought to be considered." *Morgan* v. *U. S.* 298 U. S. 468, 480. Petitioners fail to see how anyone can deny the practical value and importance of such evidence to the Commission in determining what formula or combination of formulas it would use in making its pragmatic adjustments and to the reviewing Court in appraising the "end result" of the Commission's action "viewed in its entirety."

As pointed out, the Commission is not bound by the statute to reduce the regulated company's revenues to the lowest possible rates which would serve the constitutional test of confiscation. The rates are to be just and reasonable. (Sec. 5 (a) of the Act; 15 U.S.C. 717 (d).) Under this statutory standard there is a "zone of reasonableness" within which a rate higher than that which would be barely non-confiscatory could be allowed. Evidence of present value furnishes an excellent guide for determining, within this zone of reasonableness, the just and reasonable rate if the Commission finds that strict adherence to the formula of depreciated original cost produces an "end result" which is not confiscatory but is unreasonable and discriminatory from the standpoint of the stockholders of the regulated company. There is, clearly, nothing in the opinions in the *Hope* case and in the *Natural Gas Pipe Line* case which would lend support to the Commission's action. There are expressions in those cases which would indicate that the action of the Commission is in conflict with those decisions.

(b) Section 1(b) of the Act expressly provides that the provisions of the Act shall not apply to the production or gathering of natural gas. It is petitioners' contention that

it was the statutory duty of the Commission to segregate petitioners' production and gathering properties and the revenues and expenses related thereto. An alternative approach, which seems to lead to the same result was the contention that, while the operations might all be included within the petitioners' rate accounting structure, the rate base valuations of leases and other assets relating solely to production and gathering must be consistent with their status as unregulated properties. The Commission, however, not only failed to segregate the production and gathering phase of petitioners' business but it actually included in the rate base all of petitioners' production and gathering facilities and gas leaseholds at their original cost depreciated, depleted and amortized. These leaseholds were carried on petitioners' books at only $955,096, although petitioners were prepared to show, and offered to prove, that these leaseholds had a market value on June 1, 1941, of nearly $8,500,000 (Ex. 39, R. 4199, 4201, 492). Thus, in total disregard of the Congressional mandate, the Commission arrogated unto itself jurisdiction over an unregulated portion of petitioners' property and business as fully and completely as it exercised jurisdiction over petitioners' transportation facilities and business, which latter facilities and resale business are within the ambit of the Commission's statutory authority.

The order of the Commission is peculiarly subject to attack in these proceedings because, as noted, the Commission excluded evidence which was admissible in reaching a determination with respect to the value of the commodity in the fields where produced. The decision of the court below in affirming the action of the Commission is in conflict with applicable decisions of this Court.[9]

[9] Cases cited in footnote 8, supra.

While the Natural Gas Act excludes the production and gathering of gas from the Commission's jurisdiction and permits it to exercise jurisdiction only over the interstate transportation of gas and over certain (not all) sales thereof in interstate commerce, the Commission has by its order herein found that petitioners are entitled to a price in the field for their gas, predicated solely on a consideration of the original cost of their leaseholds less accruals for depletion and the application thereto of a 6½% rate of return. This it has done notwithstanding the fact that production and gathering of gas are expressly excluded from the application of the provisions of the Natural Gas Act.

It is obvious that, if petitioners' leaseholds can now be sold for more than $8,000,000, an allowance of an earning on only a value of less than $1,000,000 is wholly erroneous and arbitrary. It is to be assumed that the market value of the leaseholds is largely reflected in the market price, or the value of the gas in the respective areas where it is produced. Such market price or field value is determined by many economic conditions and field transactions having no relation to the original cost of the leaseholds.

The Commission in reaching into and regulating this phase of the petitioners' business clearly went beyond the scope of its authority.

(c) The holding of the court below that the Commission did not commit error in refusing to make an allocation between the regulated and the unregulated portions of petitioners' business is in conflict with applicable decisions of this Court.[10]

---

[10] Smith v. Illinois Bell Telephone Co., 282 U. S. 133, 150; Minnesota Rate Cases (Simpson v. Shepard) 230 U. S. 352, 435, 437; Banton v. Belt Line Ry. Corp. 268 U. S. 413, 421; Northern Pacific Railway Co. v. McCue, 236 U. S. 585, 596-597.

Section 1(b) of the Act expressly excludes from its application, and consequently from the jurisdiction of the Commission, any sale of natural gas which is not a "sale in interstate commerce of natural gas *for resale* for ultimate public consumption for domestic, commercial, industrial or any other use." (Italics supplied.)

The Commission recognized its lack of jurisdiction over direct sales in proceedings before it involving other "natural-gas companies" and in such proceedings made the necessary allocations.[11]

It refused, however, in the case at bar to allocate and set apart that portion of petitioners' gross revenue attributable to their direct sales for customers' own use and their expenses incident thereto, although both the Commission's staff and the petitioners presented for the Commission's consideration detailed exhibits and supporting testimony to serve as a basis for an allocation (Ex. 263, R. 6883-6887, R. 3994-4002; Ex. 251, R. 5949-5955, 3631-3676, 3919-3933).

The Commission, in refusing to make such an allocation, committed a fundamental error which renders its order void and unenforceable.

(d) The decision of the court below, affirming the order of the Commission reducing petitioners' rates is erroneous in that under the tests and standards established by this Court the return allowed petitioners is inadequate.

In petitioners' case the Commission construed the Natural Gas Act as prescribing the use of a single formula. This construction permeates its entire opinion and accounts for the results reached. The Commission construed the Act as limiting petitioners' return to the allowance of

[11] Re Interstate Natural Gas Company, Inc., 48 PUR (NS) 267, 279; Re Canadian River Gas Co., Inc., 43 PUR (NS) 205, 231; Re Cities Service Gas Co., 50 PUR (NS) 65, 89.

what it determines to be a "fair and reasonable" return upon the actual legitimate cost of petitioners' property devoted to public service, less existing depreciation, plus a reasonable allowance for working capital "and no more" (R. 29).

The opinion of this Court in the *Hope* case shows that such a construction is erroneous. That opinion supports the contention made by petitioners throughout this case that, when rates are tested to determine whether the return allowed is confiscatory, it is necessary to ascertain whether the revenues available from the rates allowed will be adequate to pay all operating charges of the company and such service charges on its invested capital, including debt capital, preferred stock, common stock and surplus, as will be required by investors to compensate them for the risks assumed and to induce them to continue to invest in the company's securities. This contention of petitioners was characterized by the Commission as a "novel theory" (R. 29). Nevertheless, it is exactly the theory adopted by this Court in the *Hope* case in reaching a determination that the dollars allowed Hope as a return were adequate for the needs of that particular company.

The opinion in the *Hope* case clearly shows that the Act provides no formula for determining either rate base or rate of return; that the Commission's duty is to fix a just and reasonable price for the commodity, the gas sold in interstate commerce for resale; that, in fixing such a price, the Commission is not limited to any formula; that, in determining whether the end point, i.e., the price fixed, is non-confiscatory, the Court will consider, among other things, whether the return allowed a particular company will enable it to pay its operating expenses and service charges on its capital structure and will be adequate to maintain the credit of that particular company and to

attract capital to its securities. It was for this reason that this Court discussed in some detail the corporate structure, ownership, affiliation and earnings of Hope. These were the elements which were used in testing the constitutional and statutory adequacy of the return allowed. After making such a test, the Court reached the conclusion that the Company had failed to show that the return allowed, $2,191,314, was inadequate, from the "investor or company viewpoint."

Petitioners' evidence showed that they required a return of $5,172,129 as the necessary cost of servicing their capital structure. The Commission allowed only $4,363,925 as a return. The Commission found the cost of servicing the long term debt and preferred stock, but made no finding as to the cost of servicing the common stock and surplus, and failed in the order to make adequate provision for a return sufficient to service the entire structure.

There are many points at which the facts in the *Hope* case and the case at bar differ and yet, in considering the adequacy of the return allowed petitioners, the Commission and the court below ignored many facts of importance in this case which are comparable to facts considered important by this Court in the *Hope* case.

Panhandle Eastern is not an old and seasoned enterprise. It has not had four decades of highly profitable operations. It has not earned, as did Hope, its original investment several times, plus a surplus available for dividends in poor years far in excess of its original capitalization. Panhandle Eastern during its life of nine and three-quarters years had not earned the amount of its original capital, whereas Hope had earned its original investment more than eight times over. It is, therefore, obvious that Hope's financial position and history, which this Court viewed as significant when considering the propriety of

the Commission's action, are entirely different from petitioners' in many material respects.

Hope's capital structure was composed of only common stock and surplus, whereas petitioners' capital structure is composed of long-term debt ($33,254,500), preferred stock ($16,000,000) and common stock and surplus ($27,294,990). It is also apparent that there is considerable difference in the corporate ownership of petitioners and of Hope. Hope was a wholly owned subsidiary of Standard Oil Company (N. J.). The corporate stability and advantages for readily obtaining financing resulting from such an affiliation are obvious. Panhandle Eastern, on the other hand, has been required to rely wholly on its own resources when seeking needed capital. This Court considered it of importance that Hope's principal market outlets were affiliated distributing companies, whereas petitioners have no such protection.

The Commission included in Hope's rate base $1,392,021 as future capital additions for 1941, 1942, and 1943. It refused to include in petitioners' rate base capital additions to transmission plant in the course of actual construction at the close of the hearing, although petitioners then had in their treasury the funds to pay for such construction and although a substantial part of such construction (approximately $5,000,000) would not increase the daily sales capacity of the transmission system (R. 1951-1954).

The Commission allowed Hope an annual operating expense of $600,000 as future field exploration and development costs but refused to include in petitioners' rate base the capital expenditures required in the gas fields to maintain their present load. Of these capital expenditures $2,811,902 was required during the years 1941 and 1942 (R. 4244). The Commission's allowance for working capi-

tal was inadequate. It allowed nothing for line pack (R. 26). It allowed only $489,893 for material and supplies and only $101,097 for prepayments (R. 25). The amounts of these items on March 31, 1942, as shown by petitioners' books were $541,129 and $197,199, respectively (Ex. 267, R. 6993). The Commission refused petitioners any of their rate case expense in the amount of $350,000 (R. 31, 33) and refused to include in estimated operating expenses their increased payroll costs and increased expense of employees' welfare and pension plans amounting to $103,500 annually (R. 31).

It is apparent that facts which this Court considered sufficient to sustain the Commission's order in the *Hope* case do not exist as support for the Commission's order in petitioners' case. The adequacy of the return allowed must be determined from a consideration of petiitoners' requirements arising out of their particular situation. This the Commission failed to do, and the end result is inadequate, unjust and unreasonable to petitioners.

CONCLUSION

For the foregoing reasons it is respectfully submitted that the petition for a writ of certiorari should be granted.

Attorneys for Petitioners.

APPENDIX

The pertinent provisions of the Natural Gas Act of 1938, 52 Stat. 821, et seq. (15 U. S. C. Sec. 717) are as follows:

SEC. 1. (a) As disclosed in reports of the Federal Trade Commission made pursuant to Senate Resolution 83 (Seventieth Congress, first session) and other reports made pursuant to the authority of Congress, it is hereby declared that the business of transporting and selling natural gas for ultimate distribution to the public is affected with a public interest, and that Federal regulation in matters relating to the transportation of natural gas and the sale thereof in interstate and foreign commerce is necessary in the public interest.

(b) The provisions of this act shall apply to the transportation of natural gas in interstate commerce, to the sale in interstate commerce of natural gas for resale for ultimate public consumption for domestic, commercial, industrial, or any other use, and to natural-gas companies engaged in such transportation or sale, but shall not apply to any other transportation or sale of natural gas or to the local distribution of natural gas or to the facilities used for such distribution or to the production or gathering of natural gas.

* * * * *

SEC. 5. (a) Whenever the Commission, after a hearing had upon its own motion or upon complaint of any State, municipality, State commission, or gas distributing company, shall find that any rate, charge, or classification demanded, observed, charged, or collected by any natural-gas company in connection with any transportation or sale of natural gas, subject to the jurisdiction of the Commission, or that any rule, regulation, practice, or contract affecting such rate, charge, or classification is unjust, unreasonable, unduly discriminatory, or preferential, the Commission shall determine the just and reasonable rate, charge,

classification, rule, regulation, practice, or contract to be thereafter observed and in force, and shall fix the same by order: *Provided, however,* That the Commission shall have no power to order any increase in any rate contained in the currently effective schedule of such natural-gas company on file with the Commission, unless such increase is in accordance with a new schedule filed by such natural-gas company; but the Commission may order a decrease where existing rates are unjust, unduly discriminatory, preferential, otherwise unlawful, or are not the lowest reasonable rates.

* * * * *

SEC. 6. (a) The Commission may investigate and ascertain the actual legitimate cost of the property of every natural-gas company, the depreciation therein, and, when found necessary for rate-making purposes, other facts which bear on the determination of such cost or depreciation and the fair value of such property.

* * * * *

SEC. 19. (b) Any party to a proceeding under this act aggrieved by an order issued by the Commission in such proceeding may obtain a review of such order in the circuit court of appeals of the United States for any circuit wherein the natural-gas company to which the order relates is located or has its principal place of business, or in the United States Court of Appeals for the District of Columbia, by filing in such court, within sixty days after the order of the Commission upon the application for rehearing, a written petition praying that the order of the Commission be modified or set aside in whole or in part. A copy of such petition shall forthwith be served upon any member of the Commission and thereupon the Commission shall certify and file with the court a transcript of the record upon which the order complained of was entered. Upon the filing of such transcript such court shall have exclusive jurisdiction to affirm, modify, or set aside such order in whole or in part. No objection to the order of the Commission shall be considered by the court unless such objection shall

have been urged before the Commission in the application for rehearing unless there is reasonable ground for failure so to do. The finding of the Commission as to the facts, if supported by substantial evidence, shall be conclusive. If any party shall apply to the court for leave to adduce additional evidence, and shall show to the satisfaction of the court that such additional evidence is material and that there were reasonable grounds for failure to adduce such evidence in the proceedings before the Commission, the court may order such additional evidence to be taken before the Commission and to be adduced upon the hearing in such manner and upon such terms and conditions as to the court may seem proper. The Commission may modify its findings as to the facts by reason of the additional evidence so taken, and it shall file with the court such modified or new findings, which if supported by substantial evidence, shall be conclusive, and its recommendation, if any, for the modification or setting aside of the original order. The judgment and decree of the court, affirming, modifying, or setting aside, in whole or in part, any such order of the Commission, shall be final, subject to review by the Supreme Court of the United States upon certiorari or certification as provided in sections 239 and 240 of the Judicial Code, as amended (U. S. C., title 28, secs. 346 and 347).

PANHANDLE EASTERN PIPE LINE COMPANY, ILLINOIS NATURAL GAS COMPANY, AND MICHIGAN GAS TRANSMISSION CORPORATION, PETITIONERS

v.

FEDERAL POWER COMMISSION, CITY OF DETROIT, MICH., COUNTY OF WAYNE, MICH., MICHIGAN CONSOLIDATED GAS COMPANY, AND MICHIGAN PUBLIC SERVICE COMMISSION.

ON PETITION FOR A WRIT OF CERTIORARI TO THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE EIGHTH CIRCUIT.

PETITIONERS' REPLY TO BRIEF OF CITY OF CLEVELAND, AMICUS CURIAE.

INTRODUCTORY STATEMENT

On September 29, 1944, the City of Cleveland, Ohio, as amicus curiae, filed its brief herein suggesting (P. 2) that

> • • • the questions upon the merits which the petition for a writ of certiorari seeks to raise are not presented for review by the Supreme Court of the United States for the reason that the United States Circuit Court of Appeals for the Eighth Circuit was without jurisdiction over the subject matter of the controversy.

This reply of Petitioners[1] to that brief is filed pursuant to notice dated October 7, 1944, that the Court desires additional briefs from the parties directed to the question raised by the City of Cleveland.

Since Petitioners sought review in a circuit court of appeals of the United States, we think the challenge to the locality of the review proceedings presents a question of venue only and not a question of jurisdiction over the subject matter,[2] even though the litigation be regarded as a suit against the United States.[3] In either view, however, the statutory requirements are satisfied if, as a matter of fact, Petitioners had their principal place of business within the Eighth Circuit at the time that the petition for review of the order of the Commission was filed.[4]

This issue of fact was not raised at any time in the proceedings below, presumably, because it was common knowledge among all interested parties that Petitioners had their principal place of business at 1221 Baltimore Avenue, Kansas City, Missouri. Michigan Consolidated Gas Company alleges in its petition of intervention that Panhandle Eastern is a corporation organized under the laws of Delaware "with principal place of business at Kansas City, Mis-

[1] Herein we refer to Panhandle Eastern Pipe Line Company as "Panhandle Eastern", Michigan Gas Transmission Corporation as "Michigan Gas", and Illinois Natural Gas Company as "Illinois Natural". The three are referred to collectively as "Petitioners". The Federal Power Commission is referred to as "the Commission".

[2] *Freeman* v. *Bee Machinery Company*, 319 U. S. 448, 453; *Neirbo Company* v. *Bethlehem Corporation*, 308 U. S. 165, 167-168; *Terminal R. Asso.* v. *Kimbrel* (C.C.A. 8) 105 F(2) 262, 264.

[3] *Peoria Ry. Co.* v. *United States*, 263 U. S. 528, 535.

[4] Section 19(b) of the Natural Gas Act provides, "Any party to a proceeding under this act aggrieved by an order issued by the Commission in such proceeding may obtain a review of such order in the circuit court of appeals of the United States for *any circuit* wherein the natural-gas company to which the order relates is located or has its principal place of business, • • •." (Italics supplied.)

souri" (R. 7039). That allegation is not merely a conclusion of law; it is likewise the statement of a fact, made by one of the parties to this case which had dealt with Panhandle Eastern over a period of many years and which was in a position to know the location of its principal place of business. Its contract for the purchase of gas from Panhandle Eastern provides that any notice, request, demand, statement, or bill provided for in the agreement shall be mailed to Panhandle Eastern at Kansas City, Missouri (R. 6918).

Had the issue been raised in the court below, all pertinent evidence could have been adduced and incorporated into the record in concise form. Since it is raised for the first time here, we must rely upon such relevant evidence as appears incidentally in the record and upon matters of which the Court will take judicial notice.

PETITIONERS HAD THEIR PRINCIPAL PLACE OF BUSINESS AT KANSAS CITY, MISSOURI, WHEN THE PETITION FOR REVIEW WAS FILED.

The City of Cleveland points out that each of Petitioners was a separate corporate entity at the time that the proceedings were pending before the Commission and to the fact that the pipe lines of Michigan Gas and those of Illinois Natural and the customers served thereby were located outside the territorial limits of the Eighth Circuit. Upon these facts the negative argument is made that Petitioners did not have their principal place of business in the Eighth Circuit. It does not refer the Court to any evidence showing that the place where the actual business of Petitioners was transacted and conducted was elsewhere than at the offices in Kansas City, Missouri. It ignores completely the fact that, after Michigan Gas was acquired by Panhandle Eastern February 6, 1942, (R. 21, Note 12) the operations of Petitioners were conducted as one business.

The Commission found as a fact (Finding No. 5, R. 40)

> (5) Panhandle Eastern, Michigan Gas, Illinois Natural hereinafter referred to collectively as "the respondents") and Indiana Gas Distribution Corporation (hereinafter referred to as "Indiana Gas") are under common control and ownership, and are operated as a single, inter-connected and integrated system for the production, purchase, gathering, transportation, sale and delivery of natural gas;

At the time the petition for review was filed, November 18, 1942, (R. 1) the integrated system was conducted in all of its business and operating phases from the offices maintained by Petitioners at 1221 Baltimore Avenue, Kansas City, Missouri.

In the "Directory of Gas Utilities in the United States" for 1942, published by the Federal Power Commission, Panhandle Eastern is shown to be doing business in Illinois (P. 74), Indiana (P. 93), Kansas (P. 126), Michigan (P. 200), Missouri (P. 228), Ohio (P. 327), and Texas (P. 448). In each instance its address is shown to be 1221 Baltimore Avenue, Kansas City, Missouri. Illinois Natural is shown as having its business address at 1221 Baltimore Avenue, Kansas City, Missouri, and to be controlled by Panhandle Eastern Pipe Line Company through 100% of voting power (P. 71). Michigan Gas is shown as having its business address at 1221 Baltimore Avenue, Kansas City, Missouri, and to be controlled by Panhandle Eastern Pipe Line Company, through 100% of voting power (P. 91). An office at Detroit, Michigan, is also shown (P. 199).

The City of Cleveland refers (Cleveland brief, P. 9) to the testimony of Mr. George S. Young (R. 579) as showing that the business of Michigan Gas was conducted at Detroit. At the time that Mr. Young was testifying, November 17, 1941, (Tr.[5] 1651, 1664) he was vice-president and

a director of Michigan Gas, which was then owned by Columbia Gas and Electric Corporation and was not under the control of Panhandle Eastern. The record shows that on March 3, 1942, in the course of the taking of testimony, counsel for Panhandle Eastern stated, in response to an inquiry from the Commission's trial examiner, that Mr. Watkins was then in Kansas City arranging for the transfer from Detroit to Kansas City of all of the accounting records of Michigan Gas (Tr. 8814). Mr. Young was not retained as an officer or director of Michigan Gas after that company was acquired by Panhandle Eastern February 6, 1942.

The Directory of Gas Utilities in the United States for 1942, shows that, with respect to Petitioners, Mr. Creveling was President of all three corporations, Mr. Neuner was Vice-President of all three corporations, Mr. Watkins was Secretary and Controller of all three corporations, Mr. Sperry was Treasurer of all three corporations, Mr. Paxton was Assistant Secretary and Assistant Treasurer of all three corporations, and Mr. Jellings was Assistant Treasurer of all three corporations.

The record discloses that Mr. Neuner, as Vice-President in Charge of Operations, was located at 1221 Baltimore Avenue, Kansas City, Missouri (R. 4969), and that Mr. Paxton, who was also head of the Accounting Department (R. 1052), and Mr. Jellings were located at 1221 Baltimore Avenue, Kansas City, Missouri (R. 4969). Mr. Watkins testified that he spent a vast amount of his time at the Kansas City office (R. 2616).

---

[5] The abbreviation "Tr." designates the typewritten transcript of the proceedings before the Commission filed in the Circuit Court of Appeals. Recourse to the transcript is had when the pertinent matter is not in the printed record.

The City of Cleveland makes reference in its brief (Note 1 on P. 7) to the fact that Illinois Natural is the same company which was the appellant in *Illinois Natural Gas Company* v. *Central Illinois Public Service Company*, 314 U. S. 498. The record in that case shows (PP. 25-27), that Mr. Neuner testified that he was Vice-President and Chief Operating Officer of Panhandle Eastern and of Illinois Natural, and that both companies had their principal place of business at Kansas City, Missouri.

The City of Cleveland stresses in its brief (PP. 7-10) the pipe line mileage of Petitioners and the quantities of gas supplied through such pipe lines in the various states outside of the territorial boundaries of the Eighth Circuit. Considering the physical characteristics of the business of transporting natural gas, these facts have very little probative value in determining Petitioners' principal place of business. The principal place of business of a corporation is the place where its business is actually conducted, from which its operations are directed, and at which it holds itself out to do business with the public.[6] It has been held that, where a corporation conducts its business at a number of places, no one of which is clearly the place where its business is principally conducted, one of such places where a substantial business is transacted and from which general supervision of all of its business is exercised may properly be held to be the principal place of business of such corporation.[7]

Here, the only fair inference to be drawn from the record is that, after February 6, 1942, there was only one place, namely, 1221 Baltimore Avenue, Kansas City, Missouri, at

---

[6] *Burdick* v. *Dillon* (C.C.A. 1) 144 Fed. 737; *Dryden* v. *Ranger Refining and Pipe Line Company* (C.C.A. 5) 280 Fed. 257; *Colorado Interstate Gas Company* v. *Federal Power Commission* (C. C.A. 10) 142 F(2) 943, 950-951; *Continental Coal Corp.* v. *Roszelle Bros.* (C.C.A. 6) 242 Fed. 243, 246.

[7] *Chicago Bank of Commerce* v. *Carter* (C.C.A. 8) 61 F(2) 986.

which the business of Panhandle Eastern and its two wholly owned subsidiaries, Illinois Natural and Michigan Gas, was conducted. There is no evidence in the record to indicate that the office at 90 Broad Street, New York, was maintained by Panhandle Eastern for any other purpose than as a convenient meeting place for its directors (seven of whom, out of a total of eight, resided in New York (R. 4969)), and in order that Mr. Gano Dunn, who resided in New York, (R. 4971) might keep in touch with the principal executives of the Company in discharging his responsibility as trustee under a consent decree entered by the United States District Court for the District of Delaware in anti-trust proceedings affecting Panhandle Eastern brought by the United States.[8]

The record is replete with evidence supporting the sworn statement of Mr. J. D. Creveling, (R. 14) President of each of Petitioners, in their petition for review that (R. 6)

> Each of petitioners has its principal place of business in Kansas City, Jackson County, Missouri, within the jurisdiction of the Eighth Circuit Court of Appeals.

In addition to the officers mentioned *supra* P. 5, all of the principal department heads with their respective staffs were located at Kansas City. Mr. C. H. M. Burnham, Chief Engineer (R. 101), Mr. C. H. Hinton, Production Engineer (R. 4215), Mr. Oscar William Morton, Rate Engineer (R. 15[illegible]), and Mr. Rufus M. Smith, Company Geologist (R. 4103) gave testimony to that effect.

When the Commission made its investigation of Petitioners' business, its staff accountants and engineers had to go to Petitioners' place of business at Kansas City in

[8] These proceedings are fully described in the transcript of record filed in this Court in *Missouri-Kansas Pipe Line Company* v. *United States, et al.*, 312 U. S. 502. The consent decree appears at page 142 of that record.

order to examine the pertinent records and books of account (R. 2515, 3435) and to confer with the officers and persons in charge of the conduct of Petitioners' business (R. 1051, 1053, 1054-1055, 1058). The Bureau of Internal Revenue dealt with Petitioners at their office at Kansas City (R. 5795, 5811).

Mr. R. J. Wallace, who was employed to make a report on the market value of gas leases owned by Panhandle Eastern, had to go to Petitioners' office at Kansas City for access to the necessary records (R. 4190).

The Company's active bank account was in Kansas City (R. 1384; Tr. 4460-4461). All budgets were prepared in the Kansas City office and delivered to the Vice-President in Charge of Operations, Mr. Neuner, by whom they were sent to New York for Board action (R. 1937); and, upon their return, work orders were issued by the Accounting Department at Kansas City (R. 1938).

Although we do not regard the location of transmission lines and volume of distribution in a particular place as controlling or even persuasive, the record discloses that a substantial part of the transmission line and a number of lateral lines are located in the State of Missouri, and substantial volumes of gas were sold to industrial consumers and also to utilities for resale in the State of Missouri (R. 4091-4093, 4293, 4295).

The convenient location of Kansas City as a point from which to carry on Petitioners' business and operations readily appears from an inspection of the map introduced as Chart No. 1 of Exhibit 65 (R. 4559).

Witness Burnham testified (R. 247) that Panhandle Eastern had a private telephone system covering all of its properties west of Kansas City; that, with a completely looped system from Liberal to the Indiana line and greatly

increased loads, the response to pressure increases would be much quicker and would require much closer attention "from the central office in Kansas City"; and that it would be necessary for the Company to extend its telephone system across the state of Missouri and Illinois to connect with each and every compressor station along the line in those states and also the warehouses, "so that we will be in complete communication at all times with the employees and important points of operation on our line east of Kansas City." He stated that the Company was then depending upon the commercial telephone and telegraph lines for communications east of Kansas City but that this service was not entirely satisfactory (R. 248). He said that the Company maintained its gas dispatching office at Kansas City; that the chief dispatcher made certain observations on the existing load on the system; that weather predictions were telegraphed to him with estimates of the requirements of customers on the system; that, on the basis of all of this information, the dispatcher was able to determine when more gas should be turned on in the field and when pressures should be raised over the entire system or at certain points on the system; that the dispatcher then issued instructions to the various compressor stations and to the field headquarters accordingly. He stated that the chief dispatcher at Kansas City had a chart showing, from hourly reports, what the pressures were from time to time at the various points on the system, including points on the Michigan Gas system, which enabled him to see that the pressures responded in accordance with the deliveries required.

The dispatcher and his staff at Kansas City determine, in cases of emergency, which of the customers supplied on an interruptible basis must be shut off or given curtailed deliveries (R. 1986).

The record shows that, although Panhandle Eastern had as its General Counsel a New York lawyer, he was engaged in the general practice and was only called upon for services of an advisory character with respect to general corporate matters and in connection with proceedings before the Securities and Exchange Commission. Full time Company Counsel, Mr. Glenn Clark, whose duties were concerned with the legal phases of the day to day conduct of the corporate affairs, was employed at the offices in Kansas City (R. 3570).

The procedural documents in the nature of pleadings filed on behalf of Panhandle Eastern and Illinois Natural emanated from the Kansas City office and bore the signature of Mr. Clark, who gave his address as 1221 Baltimore Avenue, Kansas City, Missouri. The same is true with respect to Michigan Gas after it was acquired by Panhandle Eastern (R. 7020-7021, 7136, 7140, 7148).

We submit that the pertinent facts establish clearly that Petitioners had their principal place of business at Kansas City, Missouri, within the Eighth Circuit, at the time their petition for review was filed with the United States Circuit Court of Appeals for that circuit.

SECTION 19(b) OF THE NATURAL GAS ACT IS NOT SUSCEPTIBLE OF THE CONSTRUCTION ADVOCATED BY THE CITY OF CLEVELAND.

The City of Cleveland contends that "Even if but one of the three natural-gas companies to which the Federal Power Commission's order relates in this case did not have its 'principal place of business' within the Eighth Circuit, the United States Court of Appeals for the District of Columbia had exclusive jurisdiction and the Eighth Circuit had no jurisdiction over the subject matter." (Cleveland brief, P. 17)

No authority is cited in support of this contention. The exact contrary was held in *Hicks* v. *National Labor Relations Board, et al.* (C.C.A. 4), 100 F. (2) 804, 805-806; cert. denied 308 U. S. 554, under analagous circumstances and where the statutory provision for court review was almost identical with the provisions of Section 19(b) of the Natural Gas Act. To the same effect is *Standard Oil Company* v. *National Labor Relations Board* (C.C.A. 8), 114 F. (2) 743, 744. In the latter case, where two corporations affected by an order of the National Labor Relations Board sought review in different circuits, the Court (P. 744) stressed the fact that

> One decision, including findings of fact and conclusions of law, was issued by the Board, and it filed one order based upon a single record.

Here, the Commission treated Petitioners as engaged in one integrated business under single ownership, control, management, and operation. It issued one decision, including findings of fact and conclusions of law, and issued one order, based upon a single record, requiring that the gross revenues of the integrated business be reduced in a prescribed amount, without apportioning the burden of such reduction among Petitioners.

In *Federal Power Commission, et al.* v. *Natural Gas Pipeline Co., et al.*, 315 U. S. 575, the order of the Commission related to two natural-gas companies, Natural Gas Pipeline Company of America and Texoma Natural Gas Company. Review was sought by both companies in the Circuit Court of Appeals for the Seventh Circuit and the case came to this Court on certiorari. Texoma Natural Gas Company neither had any properties nor conducted any of its physical operations within the territorial limits

of the Seventh Circuit. It was a Delaware corporation producing gas only in the State of Texas and transporting that gas through its pipe line to a point in the State of Oklahoma, within the Tenth Circuit, where it was delivered to Natural Gas Pipeline Company.[9] The Commission treated the combined businesses of the two companies (as it did those of Petitioners here) as one enterprise under substantially common control and ownership. Mr. Chief Justice Stone, writing the opinion for this Court, stressed the unified nature of the entire enterprise and disposed of the case on that basis. He stated (P. 578):

> The two companies are engaged in business as a single enterprise. They produce natural gas from their own reserves in the Panhandle gas fields in Texas, and purchase gas produced there by others. They transport the gas by their own pipeline in interstate commerce to Illinois, where they sell the bulk of it at wholesale to utilities, which distribute and sell it for domestic, commercial and industrial uses.

The provision of Section 19(b) of the Natural Gas Act that review may be had in "any circuit wherein the natural-gas company to which the order relates is located or has its principal place of business" is clearly for the benefit of "the natural-gas company to which the order relates".[10] The intent of Congress in this respect would, obviously, be defeated if, in the case of an order relating to three natural-gas companies located in different circuits and having their principal places of business in different circuits, all three companies were denied this benefit and were forced to seek review in the Court of Appeals of the District of Columbia. There is no occasion

[9] *Illinois Commerce Commission* v. *Natural Gas Pipeline Company of America, et al.*, 2 F.P.C.R. 218, 233-234.

[10] *Peoria R. Co.* v. *United States*, 263 U. S. 528, 535.

here, however, for the Court to decide this question of statutory construction, since we have demonstrated that all three of the Petitioners had their principal place of business at Kansas City, Missouri, within the Eighth Circuit, at the time the petition for review was filed.

CONCLUSION.

For the foregoing reasons it is respectfully submitted that the court below had jurisdiction of the subject matter of this cause and over the parties, and there is no jurisdictional impediment to the granting of the writ of certiorari.

Statute involved	2
Questions presented	2
Statement	3
Specification of Errors to be urged	9
Summary of Argument	11
Argument	19
I. THE COMMISSION'S ACTION IN TREATING PETITIONERS' BUSINESS AS AN ENTIRETY AND REFUSING TO MAKE ANY ALLOCATION OR SEPARATION WITH RESPECT TO PETITIONERS' REGULATED AND UNREGULATED SALES WAS BEYOND ITS STATUTORY POWER.	19
A. The Natural Gas Act excludes direct sales from the rate making powers of the Commission.	19
B. The Commission failed and refused to observe the statutory limitation on its powers and to make the necessary findings and requisite allocations.	21
C. The court below erred in holding that no allocation was required.	29
D. The order of the Commission should be set aside.	43
II. THE COMMISSION CANNOT, CONSISTENTLY WITH THE NATURAL GAS ACT AND WITH DUE PROCESS OF LAW, RESTRICT THAT PART OF PETITIONERS' EARNINGS DERIVED FROM THEIR PRODUCING AND GATHERING PROPERTIES TO 6½ PER CENT ON THE DEPRECIATED ORIGINAL COST OF SUCH PROPERTIES.	46

Supreme Court of the United States

OCTOBER TERM, 1944

NO. 296

PANHANDLE EASTERN PIPE LINE COMPANY, ILLINOIS NATURAL GAS COMPANY, AND MICHIGAN GAS TRANSMISSION CORPORATION,

Petitioners,

vs.

FEDERAL POWER COMMISSION, CITY OF DETROIT, COUNTY OF WAYNE, MICH., MICHIGAN CONSOLIDATED GAS COMPANY, AND MICHIGAN PUBLIC SERVICE COMMISSION,

Respondents.

ON WRIT OF CERTIORARI TO THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE EIGHTH CIRCUIT.

BRIEF FOR THE PETITIONERS.

OPINIONS BELOW.

The opinion of the court below (R. XVI, 7198)[1] and the dissent thereto (R. XVI, 7218) filed June 6, 1944, are reported in 143 F. (2) 488. The opinion and order of the Federal Power Commission (R. I, 14-43) are reported in 45 P.U.R. (N.S.) 203.

[1] In the record citations, Roman numerals refer to the volume, and Arabic numerals refer to the page.

JURISDICTION

The judgment of the Circuit Court of Appeals was entered on June 6, 1944 (R. XVI, 7219). The petition for a writ of certiorari was filed on July 28, 1944. The petition was granted November 13, 1944, limited to the third question presented by the petition. By order of this Court entered January 3, 1945, the scope of review was enlarged to include the second question presented by the petition. The jurisdiction of this Court is invoked under Section 240(a) of the Judicial Code, as amended by the Act of February 13, 1925, and Section 19(b) of the Natural Gas Act.

STATUTE INVOLVED.

The pertinent provisions of the Natural Gas Act, approved June 21, 1938 (52 Stat. 821; 15 U.S.C. 717), are set forth in Appendix A. The section of the Act primarily involved is Section 1(b), which reads as follows:

> (b) The provisions of this act shall apply to the transportation of natural gas in interstate commerce, to the sale in interstate commerce of natural gas for resale for ultimate public consumption for domestic, commercial, industrial, or any other use, and to natural-gas companies engaged in such transportation or sale, but *shall not apply to any other transportation or sale* of natural gas or to the local distribution of natural gas or to the facilities used for such distribution *or to the production or gathering of natural gas.* (Emphasis supplied.)

QUESTIONS PRESENTED.

(1)* Whether the Commission's action in treating petitioners' business as an entirety and refusing to make any allocation or separation with respect to petitioners' regulated and unregulated sales was beyond its statutory power.

*Presented as question (3) in the Petition for Certiorari.

(2) Whether limiting the sale price of petitioners' gas for resale so as to provide an over-all return of 6½ per cent on the depreciated cost of petitioners' properties including those devoted to production and gathering of natural gas and excluding petitioners' tendered evidence as to the market value of petitioners' gas leaseholds constituted an exercise of jurisdiction over production and gathering of natural gas in violation of the Natural Gas Act.

STATEMENT.

On February 28, 1941, the City of Detroit and the County of Wayne, Michigan, filed a complaint before the Commission against Panhandle Eastern Pipe Line Co., alleging that its rates and charges for natural gas sold to Michigan Consolidated Gas Company for resale in that City and County were unreasonable, unjust, and unduly discriminatory (R. XVI, 7002). The Commission, on its own motion, instituted an investigation of all wholesale natural gas rates and charges of petitioners (R. XVI, 7061, 7088). These proceedings were consolidated (R. XVI, 7064). After a lengthy hearing before the Commission's trial examiner, the Commission, on September 23, 1942, entered in such consolidated docket the order under review here, requiring petitioners to file new schedules of rates and charges for, or in connection with, their transportation and sale of natural gas in interstate commerce for resale for ultimate public consumption, so as to reflect, when applied to their 1941 transportation and sales, a reduction of not less than $5,094,384 per annum below their 1941 consolidated gross operating revenues of $17,789,573 (R. I, 38, 42). On October 30, 1942, petitioners' motion for rehearing and reconsideration, seasonably filed (R. XVI, 7141), was denied (R. XVI, 7150).

Thereupon, petitioners promptly filed in the United States Circuit Court of Appeals for the Eighth Circuit (in

whose jurisdiction petitioners had their principal place of business) their petition for review of said order of the Commission (R. I, 1). On June 6, 1944, that court rendered the judgment under review here, affirming the order of the Commission (R. XVI, 7219).

The properties of petitioners (now owned by Panhandle Eastern[2]) constitute a natural gas production, transportation and marketing system. The system produces and purchases gas from the Panhandle Field in Texas and from the Hugoton Field in Kansas, Oklahoma, and Texas. It extends from the Panhandle Field and the Hugoton Field through the states of Oklahoma, Kansas, Missouri, Illinois, Indiana, Ohio, and Michigan, with termini in Indiana, Ohio, and Michigan. (A map of the system, as of 1941, appears in Appendix B.) When the proceedings before the Commission were commenced, Michigan Gas, a wholly owned subsidiary of Columbia Gas and Electric Corporation, owned that portion of the then existing transmission system extending eastward from Dana, Indiana. Michigan Gas purchased its entire supply of natural gas from Panhandle Eastern and sold such gas to various distributing companies for resale. It also transported for the account of Panhandle Eastern gas sold by Panhandle Eastern directly to various distributing companies serving communities in Ohio and Michigan. Illinois Natural, a wholly owned subsidiary of Panhandle Eastern, owned the lateral lines in the State of Illinois extending from Panhandle Eastern's main line and purchased its entire supply of gas from Panhandle Eastern and sold such gas to distributing companies and industrial companies in Illinois (R. I, 17-18).

---

[2] In this brief we refer to Panhandle Eastern Pipe Line Company as "Panhandle Eastern", Illinois Natural Gas Company as "Illinois Natural", and Michigan Gas Transmission Corporation as "Michigan Gas".

Panhandle Eastern purchased Michigan Gas February 6, 1942, and dissolved it March 31, 1943, after acquiring all of its properties. Illinois Natural, a wholly owned subsidiary of Panhandle Eastern, was dissolved March 31, 1943, after the latter acquired

At the hearing, petitioners caused to be identified and offered in evidence certain exhibits, and testimony relating thereto, which would have shown the market value of petitioners' gas leaseholds. The Commission's trial examiner sustained a motion to strike and exclude the exhibits above referred to and all testimony in support thereof (R. II, 715-718; R. VIII, 3973-3975). At the time the evidence was tendered, counsel for petitioners made it clear that it was offered as being relevant not only to a determination of what rate base should be used and what rate of return should be applied but also to a determination of the present value of petitioners' property and to a determination of the return in dollars which they are justly and equitably entitled to receive (R. II, 714-715).

The Commission approved the trial examiner's action in striking all evidence of the fair value of petitioners' leaseholds, basing its ruling upon its construction of the Natural Gas Act.[3]

The excluded evidence would have shown that the present value of Panhandle Eastern's leaseholds, as reflected in their market value, is $8,339,722 (Ex. 39, R. IX, 4199, 4201, 492), while the book cost of such leaseholds, less reserves for depletion amounted to $955,096,[4] a difference of $7,384,626.

---

[3] The Commission in its opinion stated: "We held in the Chicago District Electric Generating case that under section 208(a) of the Federal Power Act (the provisions of which are identical with Sec. 6(a), supra) that reproduction cost evidence is inherently fallacious and should be disregarded under that statute." (R. I, 19). It may be observed that the Commission's opinion in the cited case, 39 P. U. R. (N. S.) 263, has never been reviewed by any Court. Furthermore, no properties comparable to gas leaseholds were involved in that case.

[4] Cost of leaseholds was $1,745,206 (Ex. 52, p. 1, LL. 10 and 12—R. IX, 4275), and reserves for depletion, etc. aggregated $790,110 (Ex. 48, p. 2, LL. 10 and 33—R. IX, 4261). These leaseholds were acquired through foresight and good judgment at low prices prior to a determination of the limits of the field and principally over a period from 1930 to 1932.

The excluded evidence was tendered through a witness of many years' experience in the Panhandle and Hugoton fields. During this experience he had bought and sold many leases, both on his own behalf and as broker. He was not in any way connected with petitioners. His analysis of the market value was based on a knowledge of the locations of the various wells and an examination of each of the leases. He took into consideration the unitization agreements which Panhandle Eastern had obtained from its lessors, the subjection to outside drainage, the productivity of each drilled lease,[5] the productivity of the undrilled leases as indicated by nearby production, the rock pressures, and other matters appropriate for consideration in arriving at market value (R. IX, 4190). After having reviewed each lease separately, he placed it in a certain classification representing what was, in his opinion, the then market value of the lease "from a willing seller to a willing buyer" (R. IX, 4195). He then tabulated the number of leases in each classification, fixing a market value as to each classification ranging in the Panhandle Field from $5 per acre to $100 per acre and in the Hugoton Field from $5 per acre to $35 per acre (R. IX, 4199, 4201). In the tendered narrative of his testimony, he stated (R. I, 4198):

> In valuing the leases of Panhandle Eastern Pipe Line Company, I have not considered as a value factor the fact that the wells drilled thereon are connected to pipe lines; nor have I attempted to place a value upon the wells or equipment used in connection therewith. The values shown in the tabulations reflect merely the present market value of the leases, accord-

[5] The average open flow potential in 1940 for the West Sweet Panhandle Field (in which petitioners' wells in the Panhandle Field were located) was 16,019 MCF daily, whereas the open flow potential of petitioners' wells was 25,025 MCF daily (R. IX, 4129, ll. 2 and 3, col. D).

> ing to my judgment. It is my opinion that if this acreage reserve owned by the Panhandle Eastern Pipe Line Company in the two fields was available, it could unquestionably secure an outlet for its gas, exclusive of any pipe line now in the fields and could be sold at the valuation fixed by me.

The valuation of $8,339,722 placed by the witness upon petitioners' 264,971 acres of gas leaseholds shows an average value per acre of approximately $31, whereas the average value per acre under the Commission's valuation was $3.60.

The evidence admitted by the trial examiner showed that, for 1940 (the last full year for which statistics were available at the time), petitioners paid for purchased gas an average field price of 3.8429¢ per MCF, whereas for their own produced gas, under the Commission's formula, petitioners would have received only 2.9924¢ per MCF. Comparable figures for the year 1941 (based in part on estimates) were: 3.8336¢ per MCF paid by petitioners for purchased gas and 2.8272¢ per MCF allowed by the Commission to petitioners for their own produced gas.[6]

The evidence also showed that there were thirty-four wells jointly owned by petitioners and others, the gas from which flowed into petitioners' transmission system (R. IX, 4153). Under gas purchase contracts, petitioners paid the co-owners of the wells for the latter's share of the production 5¢ per MCF (R. III, 1107). The Commission found no fault with this price in its allowance of operating expenses; yet, by reason of its valuation of petitioners' gas leaseholds at only depreciated original cost, the effect of the Commission's order was to allow petitioners only 2.8272¢ per MCF for their share in the production from these wells in 1941.[7]

[6] See computations with record references, Appendix C.
[7] See computations with record references, Appendix C.

The evidence also showed that petitioners owned a particular group of thirteen producing wells, the gas from which was sold to Argus Natural Gas Company for distribution in nearby towns in Kansas. The wells were not even physically connected with any part of petitioners' transmission system, but were connected with the gathering system of Argus Natural Gas Company (R. I, 255-256; XIII, 5893; IX, 4133). The revenue derived from sales of gas from these wells to the Argus Natural Gas Company amounted to $67,365.40 for the year 1941. The average price paid by Argus Natural Gas Company to petitioners for this gas at the wellhead was 6.13¢ per MCF (R. XIII, 5707, l. 32). The Commission included all of these wells and the revenue derived therefrom in its unit treatment of petitioners' business.

Most of the gas sold by petitioners is sold to distributing companies for resale, but a very substantial quantity is sold direct to industrial customers for consumption by them. For the year 1941 direct sales represented 13.2% of all gas transported and sold (R. I, 33). The revenue derived therefrom amounted to $1,500,527 (R. XIII, 5947, Ex. 251, l. 23, Col. F). There was testimony to the effect that $128,848 of the entire investment in plant was used exclusively in serving industrial consumers purchasing gas directly from petitioners (R. I, 33). A very substantial part of the investment in plant was used exclusively in serving distributing companies buying for resale. A map of the system (Appendix B) upon which the locations of the nineteen industrial customers served in 1941 are indicated shows that all of the transmission system from Zionsville, Indiana, to Detroit, Michigan, was used exclusively in serving customers buying for resale.

Petitioners presented at the hearing a suggested basis for an allocation between the regulated and the non-regulated sales (R. XIII, 5947, Ex. 251; R. VIII, 3631-3676,

3857). The Commission's staff also presented a suggested allocation (R. XVI, 6883-6887, Ex. 263; R. VIII, 3994-4002). The Commission refused, however, in its rate reduction order, to make any separation of property or to make any allocation with respect to petitioners' regulated sales and non-regulated sales or to make any findings upon which such separation or allocation could be based; it treated petitioners' business as one subject to regulation in its entirety (R. I, 34).

The Commission allowed petitioners a return of $4,363,925, 6½% on a rate base selected by it, $67,137,305 (R. I. 30). This rate base was determined on the basis of petitioners' business as an entirety without regard to the fact that a substantial portion of petitioners' sales and their business of production and gathering were expressly excluded from the Commission's jurisdiction by the Natural Gas Act.

On review, the court below, with one judge dissenting, affirmed the Commission's order.

SPECIFICATION OF ERRORS TO BE URGED.[8]

The court below erred:

1. In affirming the order of the Federal Power Commission.

2. In failing to set aside the order of the Federal Power Commission.

3. In failing to hold that the Commission's action in treating petitioners' business as an entirety and refusing to make any allocation or separation with respect to petitioners' regulated and unregulated sales was beyond its statutory power.

[8] This specification adheres in substance to the assignments of error urged before the Commission in the application for rehearing (R. XVI, 7141-7148) and to the specification of errors in the petition to review (R. I, 7-12).

4. In holding that the Commission can, consistently with the Natural Gas Act and Article V of the Amendments to the Constitution of the United States, limit the sale price of petitioners' gas for resale so as to provide an over-all return of 6½ per cent on the depreciated cost of petitioners' properties, including those devoted to production and gathering of natural gas, excluding petitioners' tendered evidence as to the market value of petitioners' gas leaseholds.

SUMMARY OF ARGUMENT.

I.

THE COMMISSION'S ACTION IN TREATING PETITIONERS' BUSINESS AS AN ENTIRETY AND REFUSING TO MAKE ANY ALLOCATION OR SEPARATION WITH RESPECT TO PETITIONERS' REGULATED AND UNREGULATED SALES WAS BEYOND ITS STATUTORY POWER.

A. The Natural Gas Act excludes direct sales from the rate making powers of the Commission.

Section 1(b) of the Natural Gas Act (Appendix A) specifically provides that the provisions of the Act shall apply to the transportation and sale in interstate commerce of natural gas *for resale* for ultimate public consumption, but *shall not apply* "to any other transportation or sale of natural gas". It necessarily follows that a direct sale to an industrial consumer for such consumer's own use is not subject to the rate making powers of the Commission.

The legislative history of the Natural Gas Act makes it clear that Congress regarded sales of natural gas by a natural gas company to industrial customers for such customers' own use as not imbued with a public interest and that it was the intent of Congress that such sales should be free from regulation.

B. The Commission failed and refused to observe the statutory limitation on its powers and to make the necessary findings and requisite allocations.

The Commission has recognized its lack of jurisdiction over direct sales in proceedings before it involving other "natural-gas companies" and, in such proceedings, has made allocations supported by specific findings.

The Commission refused in the case at bar to make any allocation, although the Commission's staff and petitioners presented for the Commission's consideration detailed plans for allocation.

The Commission failed to make the necessary findings required by the evidence before it. The Commission made no finding as to the component parts of petitioners' consolidated gross operating revenue, $17,789,573, which included all of the revenue from petitioners' unregulated sales and which petitioners were required to reduce by $5,094,384. There is no finding of any kind relating to allocation.

The order cannot be sustained upon findings so inadequate, in the face of the undisputed facts that (a) 13.2% of all gas sold was not sold for resale but for consumption by the purchaser; (b) $1,500,527 of the gross revenue was derived from such direct sales; (c) $128,848 of the plant investment was used exclusively in the service of direct industrial customers; and (d) the entire transmission system from Zionsville, Indiana, to Detroit, Michigan, was used exclusively in the service of customers buying gas for resale.

The Commission's reasons for failing to make an allocation, stated in its opinion, afford no support for such failure.

The Commission erred in its assumptions (1) that petitioners carried the burden of "showing that the direct industrial sales are so distinct and separate from the general wholesale business that the two cannot here be considered together" and (2) that it could treat all of the business of petitioners "as an entirety requiring no allocation as between the two classes of sales" simply because it appeared reasonable to the Commission to do so.

It is not responsive to the issue for respondents to say that the action of the Commission was "supported by substantial evidence and cannot be said to lack a rational basis".

The question is whether the Commission exceeded the statutory limitation upon its powers. "Only when statutory standards have been applied can the question be reached as to whether the findings are supported by evidence."

The plain fact is that the Commission exceeded its jurisdiction. In determining the amount of the rate reduction ordered, the Commission failed to separate transactions which were within its jurisdiction and those which were beyond its jurisdiction.

As a result, there is a "congenital infirmity" in the order, which renders it void and unenforceable.

C. The Court below erred in holding that no allocation was required.

The court below upheld the Commission's action on the erroneous assumption that "if a segregation had been made it would not materially have affected the result".

The Commission made no findings addressed to the evidence bearing on allocation examined by the court below; it made no segregation or any findings showing what the result of a segregation, if made, would be; and it made no findings in support of the conclusion (imputed to it by the court below but not found in the opinion or findings of the Commission) that, "if a segregation had been made, it would not materially have affected the result".

The court below completely ignored the fact that, in reaching their respective estimates of "cost of service" allocable to the unregulated sales, both the witness for the

Commission's staff and the witness for petitioners had made *pragmatic adjustments* which were not reviewed by the Commission, and *upon which the Commission had made no findings whatever.* The absence of this essential element of the legislative process delegated to the administrative body appears to have been completely overlooked by the court below.

The decisions of this court are uniform in holding that, where part of a regulated business is not subject to regulation, the regulatory body must make an appropriate separation or allocation of property, revenue, and expense as between the regulated and non-regulated transactions.

D. The order of the Commission should be set aside.

The failure of the Commission to make the necessary separation of property, revenue, and expenses as between the sales subject to regulation and the sales not subject to regulation renders its order null and void. Under the provisions of the Natural Gas Act, the order should be set aside. Although Section 19(b) of the Natural Gas Act (Appendix A) provides that, upon review, the Court may modify an order of the Commission, relief to petitioners by modification of the order is impossible here because the legislative process is incomplete and forms no adequate basis upon which the Court can modify the order without departing from the judicial function and performing the legislative function.

II.

THE COMMISSION CANNOT, CONSISTENTLY WITH THE NATURAL GAS ACT AND WITH DUE PROCESS OF LAW, RESTRICT THAT PART OF PETITIONERS' EARNINGS DERIVED FROM THEIR PRODUCING AND GATHERING PROPERTIES TO 6½ PER CENT ON THE DEPRECIATED ORIGINAL COST OF SUCH PROPERTIES.

By Section 1(b) of the Act, Congress expressly provided that the provisions of the Act *shall not apply to the production or gathering of natural gas.*

When the provisions of Section 1(b) are considered together and in their relation to the whole scheme of regulation, particularly the declared policy set forth in Section 1(a) of the Act, the conclusion is inescapable that the intent of Congress was to exclude from regulation the entire business of production and gathering, including the interstate sale of gas by the producer thereof even though it could constitutionally regulate such sale; likewise, to exclude from regulation the production and gathering phase of the business of a "natural-gas company" engaged in interstate transportation and sale.

It is the *service* of transporting gas to the interstate markets that Congress declares to be imbued with a public interest and to require regulation. Where Congress has authorized price fixing with respect to *a commodity*, as distinguished from *a service*, it has not delegated to the administrative agency freedom of action within the broad limits of the conventional rate making guide "just and reasonable", but has provided specific standards peculiarly adapted to the particular commodity.

The exclusion of production and gathering of natural gas from the application of the provisions of the Act is not

qualified so as to apply only to producers who do not also have transportation facilities. The Commission cannot regulate petitioners' production and gathering any more than it can regulate the numerous producers of natural gas and royalty owners who sell their production to petitioners.

It was incumbent on the Commission to determine the field price or actual field value of natural gas in the areas in which petitioners produce their gas, to eliminate petitioners' leaseholds and producing and gathering facilities from the rate base, to disallow expenses of gathering and production—in short, to segregate completely the production phase of petitioners' business from the regulated phase thereof—and to allow to petitioners as an expense item the market price or actual field value for all gas produced by petitioners and taken into their main transmission system.

There was evidence in the record upon which the Commission could have found the market price or field value of petitioners' gas at the well.

Petitioners did not attempt during the hearings to segregate their production and gathering properties and the revenues and expenses related thereto; this was the statutory duty of the Commission. An alternative approach which seemed to lead to substantially the same result was petitioners' contention that, while the operations might all be included within the Commission's rate structure, the rate base valuation of leases and other assets relating solely to production and gathering must be consistent with their legal status as unregulated properties.

The Commission failed to segregate the production and gathering phase of petitioners' business; it included in the rate base all of petitioners' production and gathering facilities and gas leaseholds at only their original cost less reserves for depreciation and depletion. These leaseholds

were carried on petitioners' books at only $955,096, although petitioners offered to prove (but the evidence was excluded) that their leaseholds had a market value of $8,339,722. The exclusion of this evidence was a denial of due process.

The Commission's action in restricting that part of petitioners' earnings derived from their producing and gathering properties to ½ per cent on the depreciated original cost of such properties was arbitrary, discriminatory, lacking any rational basis, and amounted to a denial of due process for the following further reasons:

1. The prevailing market price or field value of gas at the well in the Hugoton Field was from 4¢ per MCF to 5¢ per MCF and such market price or field value in the Panhandle Field was 4½¢.

2. Petitioners and other gas companies in the Panhandle Field paid their royalty owners 4½¢ per MCF for the ⅛ of the gas produced owned by such royalty owners. These payments to royalty owners were allowed by the Commission as an operating expense without criticism.

3. Petitioners produced approximately fifty per cent of the gas which they transported and sold; the remainder was purchased from royalty owners and numerous independent producers in the field. The average field price paid by petitioners for gas in the year 1940 was 3.8429¢ per MCF. Under the Commission's formula petitioners would have been allowed for the gas which they produced only 2.9924¢ per MCF. Comparable figures for the test year, 1941 (based partly on estimates), were 3.8336¢ per MCF paid by petitioners for purchased gas and 2.8272¢ per MCF allowed petitioners under the Commission's formula for their produced gas. The payments for purchased gas were allowed by the Commission as an operating expense without criticism.

4. With respect to thirty-four wells jointly owned by petitioners and others, petitioners are required to pay 5¢ per MCF for the co-owner's share, but receive only 2.8272¢ per MCF for their share, of the gas coming out of the same well.

5. No separation or segregation was made by the Commission with respect to thirteen producing wells owned by petitioners which were not even connected with petitioners' transmission system but were connected with the gathering system of a local gas company serving local market. Petitioners sold the gas from these wells at the well head at 6.13¢ per MCF. The revenue from these sales for 1941 was $67,365.40. The Commission included all of these sales, and the revenue derived therefrom, in its unit treatment of petitioners' business whereby it determined that $5,094,384 of petitioners' consolidated gross operating revenues for 1941 of $17,789,573 was "available for rate reduction."

ARGUMENT.

I.

THE COMMISSION'S ACTION IN TREATING PETITIONERS' BUSINESS AS AN ENTIRETY AND REFUSING TO MAKE ANY ALLOCATION OR SEPARATION WITH RESPECT TO PETITIONERS' REGULATED AND UNREGULATED SALES WAS BEYOND ITS STATUTORY POWER.

A. The Natural Gas Act excludes direct sales from the rate making powers of the Commission.

Section 1(b) of the Natural Gas Act (Appendix A) specifically provides that the provisions of the Act shall apply to the transportation and sale in interstate commerce of natural gas *for resale* for ultimate public consumption, but *shall not apply* "to any other transportation or sale of natural gas". It necessarily follows that a direct sale to an industrial consumer for such consumer's own use is not subject to the rate making powers of the Commission.

The intent of Congress that such interstate sales should be free of regulation is clearly shown by the legislative history of the Act. The report of the "Hearing before the Sub-Committee of the Committee on Interstate and Foreign Commerce of the House of Representatives" (74th Congress, 2nd session) on H.R. 11662,[9] April, 1936,

---

[9] The bill that was finally enacted by the Congress as the "Natural Gas Act" was H.R. 6586. In its report to the House (Rep. No. 709, H. Repres., 75th Congress, First Session), the Committee states that the said H.R. 6586 "is substantially identical with H.R. 12680" which, as amended, had been favorably reported by the Committee in the 74th Congress, Second Session. The H.R. 12680, referred to in the said report, contained the following provision as a part of Section 1(b): "Provided, That nothing in this Act shall be construed to authorize the Commission to fix the rates or charges • • • *for the sale of natural gas for industrial use only.*" (Emphasis supplied.) An identical provision was contained in Section 1(b), H.R. 11662.

In the bill, as finally enacted, the exclusion clause is even broader in scope: Sec. 1(b) "*The provisions of this Act* • • • • shall not apply to *any other* transportation or sale of natural gas • • • •." (Emphasis supplied.)

incorporated as a part thereof the brief of Mr. Dozier A. DeVane, then Solicitor for the Federal Power Commission, which brief was submitted to the Committee by Mr. DeVane, at the time of his appearance for the purpose of explaining the various sections of the bill. In speaking of direct sales, Mr. DeVane said in his brief (Page 17 of the said report):

> The bill makes no attempt to regulate the production or gathering facilities of a natural-gas company. - - - - *Likewise natural gas in the process of transportation in high-pressure mains in interstate commerce for industrial use is excluded upon the basis that such sale is made under highly competitive conditions and is not imbued with a public interest.* (Emphasis supplied.)

When H.R. 6586 (the bill which was enacted as "The Natural Gas Act") was being considered in the House on July 1, 1937, the following colloquy took place:

> Mr. Thompson of Illinois: Is there anything in this bill that would affect the relationship through which the large industrial consumer buys natural gas directly from the pipe line company and not through a local distributing company or agency?
>
> Mr. Lea: The question there involved is whether the purchase is for private consumption, or for resale to the public.
>
> Mr. Thompson of Illinois: It would be for private consumption.
>
> Mr. Lea: If it is for private consumption, it would not be affected by this act; if it were for public consumption, the gas rate would be regulated.
>
> Mr. Thompson of Illinois: There is an industry in my district which I understand buys natural gas directly from the pipe line company and has established its own connection. As I understand, this bill does not purport to regulate such a transaction or existing contracts of that nature.

> Mr. Lea: Not unless it falls within the class of public consumption. A natural gas company engaged in the transportation or sale of gas, as I have just indicated, is subject to regulation under this bill. (Con. Rec., Vol. 81, Part 6, P. 6721.)

Later in the discussion Representative Halleck stated, in explaining the bill:

> The question was asked as to whether or not the price that might be charged to a manufacturer who buys direct from the transportation company would be affected by this bill. As I view it, the answer to that question is that this bill seeks only to reach those sales where the sale is for resale to the ultimate consumer. So a purchaser for industrial use who bought the gas not for resale but for consumption in his own plant, would not be reached by the measure. (Con. Rec., Vol. 81, Part 6, P. 6723.)

It seems clear that Congress recognized that the direct sale of natural gas to industrial plants or for the purchaser's own use is, as Mr. DeVane put it, "not imbued with a public interest". Such plants are served on an interruptible basis and are equipped with stand-by equipment for the use of other fuels. Gas is sold to them on a competitive basis and the price must be in line with the prices of competitive fuels. It is immaterial whether that part of the business of a natural gas company which is not subject to regulation by the Commission, is operated at a loss or at a high profit. The rate making powers of the Commission under Section 5 of the Natural Gas Act (Appendix A) are confined to sales for resale for ultimate public consumption.

B. The Commission failed and refused to observe the statutory limitation on its powers and to make the necessary findings and requisite allocations.

The Commission has recognized its lack of jurisdiction over direct sales in proceedings before it involving other "natural-gas companies" and, in such proceedings, has made allocations supported by specific findings.[10] In the *Cities Service Gas Company* case, 50 P. U. R. (N. S.) 65, 89, the Commission said:

> The Company's facilities and operations are devoted in part to natural gas service which is not subject to our jurisdiction. This service consists principally of gas sales made directly to large industrial customers. The necessity arises, therefore, for making an allocation of costs as between the jurisdictional and non-jurisdictional sales.

The Commission refused, however, in the case at bar, to make any allocation, although the Commission's staff[11] and petitioners[12] presented for the Commission's consideration detailed plans for allocation.

The Commission found that petitioners' consolidated gross operating revenue in 1941 totaled $17,789,573. Treating this consolidated gross revenue as though it were derived entirely from sales for resale, the Commission found that it was $5,094,384 in excess of the consolidated gross revenue which the Commission determined petitioners were entitled to earn. It ordered petitioners to reduce their rates for gas sold for resale so as to reflect in the aggregate a reduction of that amount, but *the impact of the Commission's order was upon petitioners' gross revenue*, which included all of the revenue from petitioners' direct sales. The Commission's formal findings (R. I, 38-43) contain no

finding of the amount of petitioners' revenue derived from their direct sales or of their property used in such service or of the amount of operating expense attributable thereto. There is no finding of any kind relating to allocation.

The order cannot be sustained upon findings so inadequate, in the face of the undisputed facts that (a) 13.2% of all gas sold was not sold for resale, but for consumption by the purchaser (R. I, 33); (b) $1,500,527 of the gross revenue was derived from such direct sales (R. XIII, 5947); (c) $128,848 of the plant investment was used exclusively in the service of direct industrial customers (R. I, 33); and (d) the entire transmission system from Zionsville, Indiana, to Detroit, Michigan, was used exclusively in the service of customers buying gas for resale (R. VIII, 3616-17, Appendix B).

Although the Commission's findings are silent on the issue presented here, its opinion sets forth its reasons for refusing to make an allocation (R. I, 33-34). Several of the stated reasons, in themselves, show injury to petitioners resulting from the Commission's failure to make an allocation, rather than any sound basis for such failure. None of them finds any basis whatever in the Natural Gas Act. These reasons may be summarized as follows:

1. "No capacity has ever been constructed or provided in their gas plant for these direct industrial customers" and only a relatively small investment in plant is used exclusively in the service of the direct industrials;

2. Deliveries to direct industrial customers are made on an interruptible basis and only when there is available excess off-peak capacity "not required by the other wholesale customers";

3. "Respondents themselves treat their entire business as a unit and make no segregation of costs or profits on their books as between the two classes of sales";

4. The "incidental direct industrial business is in reality a by-product of the wholesale business, comparable to the Respondents' gasoline extraction business".

Examining these reasons in the numerical order stated above, we submit:

1. The facts that no capacity has ever been constructed or provided in petitioners' gas plant for these direct industrial customers and that only a relatively small investment in plant is used exclusively in the service of the direct industrials are material only to the extent that they show the relatively small proportion of the expense of construction and operation of the properties which should be allocated to the direct industrial sales. If the Commission has no jurisdiction over these sales, it cannot deal with them as regulated sales, regardless of the comparative volume, the relatively small investment in properties exclusively used in such service, or the predominant use in the regulated business of the jointly used properties.

2. The fact that petitioners' direct sales to industrial customers are made on an interruptible basis and are almost completely curtailed on peak days, when substantially the entire capacity of the line is required for the service of regulated sales, emphasizes the relatively small amount of the cost of construction and operation attributable to such sales. It does not in any way support a failure to allocate. The interruptible nature of such sales was well known to Congress at the time the Natural Gas Act was being considered (see discussion of legislative history, *supra*, pages 19-21). With this knowledge, Congress excluded such sales from the rate making powers of the Commission and, thus, established the necessity of allocation.

3. The Commission's jurisdiction with respect to rate making cannot be enlarged by any waiver on the part of petitioners. An intent to waive their statutory right to have their exempted sales free from regulation cannot be inferred, however, from the manner in which their books were kept. There is no showing that petitioners' books were not kept in accordance with the rules and regulations prescribed by the Commission. Furthermore, the record shows that sufficient evidence upon which to make a separation or allocation was before the Commission.

4. The Commission's statement that the "direct industrial business is in reality a by-product of the wholesale business, comparable to the respondents' gasoline extraction business" has no support in reason or in fact. The extraction of gasoline and water from the natural gas as it comes from the well is absolutely necessary in order that the gas can be safely and economically transported. The extracted gasoline may be termed a by-product. The gas sold to the consumer directly rather than through a distributing company, is not in any sense a by-product. It is the same commodity that is sold to distributing companies for resale. The distinction between the direct sale and the sale for resale created by the Natural Gas Act is artificial. The basis for the distinction is found in the legislative history of the Natural Gas Act (*supra*, pages 19-21). Congress recognized that such sales are governed by competitive conditions, that they are "not imbued with a public interest", and that they form an important segment of the natural gas industry. Such sales were exempted from the rate making powers of the Commission.

The Commission characterized the direct sales as "purely incidental" (although the record shows that petitioners, from the outset, have sought, and obtained, direct sales as well as sales for resale (Ex. 479, R. XII, 5457); referred to some remarks of Panhandle Eastern's President to the effect that allocation of cost of service, including "return",

was "theoretical", "unrealistic" and "not practical" (comments, clearly, lending no legal support to the Commission's failure to make an allocation); and concluded its discussion of the subject with the statement (R. I, 34):

> It is obvious from the record that respondents have made no clear and convincing showing that the direct industrial sales are so distinct and separate from the general wholesale business that the two cannot here be considered together. We conclude, therefore, that, under such circumstances, it is not unreasonable to treat the entire business as a unit requiring no allocation as between the two classes of sales.

This statement shows that the Commission fell into error in two further respects—(1), in assuming that any such burden was placed upon petitioners by the statute, and (2) in assuming that the statute conferred upon the Commission authority to include, or segregate, petitioners' non-regulated business, according to its judgment of what would be reasonable under the circumstances.

As to the first of these errors, the natural Gas Act places no burden upon petitioners to make "a clear and convincing showing that the direct industrial sales are so distinct and separate from the general wholesale business that the two cannot here be considered together" (such a showing, however, was actually made). The duty was heavy upon the Commission to refrain from exercising jurisdiction over a subject matter expressly excluded from its authority. The flagrance of its disregard of this duty is emphasized by the fact that its own staff submitted a plan for separating the non-regulated from the regulated.

As to the second of these errors, we know of no authority for the proposition that an administrative agency may knowingly regulate within a field expressly excluded from its jurisdiction by the source of its authority; simply be-

cause it appears reasonable to do so.[13] The courts have always been alert to inquire *sua sponte* into questions affecting their jurisdiction. Where it appears that the subject matter is expressly excluded from the court's jurisdiction, no waiver or other action of the parties can confer such jurisdiction.[14] Administrative agencies should be equally alert.

It is not responsive to the issue for respondents to say, as they did at page twelve of their brief in opposition to the petition for certiorari herein:

> The Commission's finding that it was unnecessary in this case to make a detailed allocation was accordingly supported by substantial evidence and cannot be said to lack a rational basis.

The substantial evidence rule may be invoked only *after* jurisdiction is established. The question is whether the Commission exceeded the statutory limitation upon its powers. "Only when the statutory standards have been applied can the question be reached as to whether the findings are supported by evidence."[15] The plain fact is that the Commission exceeded its jurisdiction. In determining the amount of the rate reduction ordered, the Commission failed to separate transactions which were within its jurisdiction and those which were beyond its jurisdiction. Its order was based upon inadequate findings. The findings rested upon the theory that petitioners' *entire* business was subject to the jurisdiction of the Commission (R. I, 38, 42):

[13] *Cf. Federal Trade Comm.* v. *Bunte Bros., Inc.*, 312 U. S. 349; *Smith* v. *Illinois Bell Tel. Co.*, 282 U. S. 133, 148-150; and *Mitchell* v. *United States, et al.*, 313 U. S. 80, 97.

[14] *Cutler* v. *Rae*, 7 How. 729, 730; *United States* v. *Corrick*, 298 U. S. 435, 440.

[15] *United States, et al.* v. *Carolina Freight Carriers Corp.*, 315 U. S. 475, 489.

whereas a substantial part thereof was expressly excluded by the Act. As a result, there is a "congenital infirmity" in the order, which renders it void and unenforceable.

In *United States et al.* v. *Baltimore & Ohio Railroad Co.*, 293 U. S. 454, an order of the Interstate Commerce Commission was under attack. Mr. Justice Brandeis, speaking for a unanimous court, said (page 462):

> The railroads contend that to support the order certain basic findings are essential; that these were not made; and that, hence, the order is void. This contention is in our opinion sound.

And further, (page 464):

> This complete absence of "the basic or essential findings required to support the Commission's order" renders it void. *Florida* v. *United States*, 282 U. S. 194, 215. Compare *Wichita Railroad & Light Co.* v. *Public Utilities Comm'n*, 260 U. S. 48, 58-59; *Mahler* v. *Eby*, 264 U. S. 32, 44-45.

In *United States, et al.* v. *Carolina Freight Carriers Corp.*, 315 U. S. 475, an order of the Interstate Commerce Commission made under the provisions of the Motor Carrier Act of 1935 was under attack. Mr. Justice Douglas said (pages 488-489):

> It is impossible to say that the standards which we have set forth were applied to the facts in this record. Hence, as in *Florida* v. *United States*, 282 U. S. 194, 215, the defect is not merely one of the absence of a "suitably complete statement" of the reasons for the decision; it is the "lack of the basic or essential findings required to support the Commission's order." And see *United States* v. *Baltimore & Ohio R. Co.*, 293 U. S. 454, 464; *United States* v. *Chicago, M. St. P. & P. R. Co.*, 294 U. S. 499, 510-511. Congress has made a grant of rights to carriers such as appellee. Congress

has prescribed statutory standards pursuant to which those rights are to be determined. Neither the Court nor the Commission is warranted in departing from those standards because of any doubts which may exist as to the wisdom of following the course which Congress has chosen. Congress has also provided for judicial review as an additional assurance that its policies be executed. That review certainly entails an inquiry as to whether the Commission has employed those statutory standards. If that inquiry is halted at the threshold by reason of the fact that it is impossible to say whether or not those standards have been applied, then that review has indeed become a perfunctory process. *If, as seems likely here, an erroneous statutory construction lies hidden in vague findings, then statutory rights will be whittled away.* An insistence upon the findings which Congress has made basic and essential to the Commission's action is no intrusion into the administrative domain. It is no more and no less than an insistence upon the observation of those standards which Congress has made "prerequisite to the operation of its statutory command." *Opp Cotton Mills, Inc. v. Administrator*, 312 U. S. 126, 144. Hence the requirement is not a mere formal one. *Only when the statutory standards have been applied can the question be reached as to whether the findings are supported by evidence.* (Emphasis supplied.)

C. The Court below erred in holding that no allocation was required.

The court below examined the method of allocation submitted by the Commission's staff and the method of allocation submitted by petitioners' witnesses, made its own calculation (predicated upon a misapprehension of what the testimony and computations of the witnesses showed) and concluded (R. XVI, 7212):

> There is in the record a substantial basis for the Commission's conclusion that, in determining reasonable rates for sales of natural gas subject to

regulation, it was unnecessary to make a segregation of revenues attributable to sales not subject to regulation, and that, if a segregation had been made, it would not materially have affected the result.

In its calculation, the court below had to charge the direct sales *twice* with the same item, $500,414, in order to reach its conclusion that "if a segregation had been made, it would not materially have affected the result". It had to treat the entire $1,000,828, net revenue from direct sales, as revenue from sales for resale by, first, *contributing* $500,414 to the "return" and, second, regarding the remaining $500,414 as being *in* the "return".

Upon analysis of the opinion of the court below, two erroneous conceptions appear to be primarily responsible for the result reached, namely, (1) its conception that petitioners' witness Biddison's "businessman's judgment" had the same legal force as a finding and determination by the Commission, and (2) its conception of the meaning and effect of the term "return", as used in the method of allocation which the witness was pursuing from his understanding of the Commission's prior opinion in the Colorado Interstate case.[16]

Discussing these in order, we submit:

1. Exhibit 251 (R. XIII, 5947), on which Biddison's testimony was based, purported to be only his determination of a proper segregation of revenues and a proper allocation of operating expenses between regulated and non-regulated sales in accordance with the method Biddison understood the Commission had adopted in the Colorado Interstate case. The exhibit showed that, after such allocation, including Federal income taxes in the amount of $349,062.28, the sum of $651,766.70 remained as earnings

[16] In re: Colorado Interstate Gas Co., 43 P.U.R. (N.S.) 295; now under review in this Court, No. 379, October term, 1944.

from direct sales. This sum, plus the item of $349,062.28, representing Federal income taxes, totalled $1,000,828, and this is the source from which the court below obtained that figure.

Biddison was unwilling to go further with the allocation. When he was pressed by counsel for the Commission as to what "some fair basis" of allocation beyond this would be, he said (R. VIII, 3873):

> I do not think I should be sitting in the judge's bench on that matter. Before anybody could make a definite statement about what he thought was fair on that matter, he would have to know what the procedure was going to be in regard to the subsequent allocation of earnings between the two classes of business. • • •
>
> In the subsequent procedure in this case of allocating *return as if it were an item of cost*, one should know that and then, knowing that, I think that some compromise could be reached between whether the whole million dollars should be retained or what amount of it should be charged as a rental and credited to the regulated business *as a reduction in expense*. (Emphasis supplied.)

Previously, Biddison had been asked: "Is there any engineering basis for a division, from an engineering standpoint?" He had replied:

> Not as an engineering matter. I do not know of any basis. As a business matter I think there are ways in which it could be fairly decided (R. VIII, 3872).

When pressed by the trial examiner for his judgment on the matter, he said:

> If the examiner wants my opinion, I will give it. It is my opinion that the $1,000,828.98 should be divided 50-50.

The examiner asked, "Why?" and Biddison said:

> It is my judgment. It is just my judgment as a businessman, that would be a fair allocation of it (R. VIII, 3874).

This is the evidence upon which the court below held:

> The record indicates that the 1941 revenue of petitioners from direct industrial sales less expenses, but before Federal income taxes, was $1,000,828; that a fair allocation of this revenue would be to treat one-half of it as derived from direct sales; and that the net amount properly attributable to that nonregulated portion of the business would be $319,656 ($500,414 return less $180,758 income taxes at 1941 tax rates) (R. XVI, 7211, 7212).

We shall demonstrate presently the fallacy of this conclusion. We make the point here that the court below committed a fundamental error in its conception that the "businessman's judgment" of Biddison had the same legal effect as a finding thereon by the Commission. As the witness himself stated, he was not "sitting in the judge's bench on that matter".

2. The court's conception of the meaning of the word "return" as used by the witness Biddison (according to his understanding of the method of allocation applied by the Commission in the Colorado Interstate case) was clearly erroneous. The term "return", as so used, is regarded as an item of cost but is, in effect, the earning which the Commission allows the regulated company, as the owner of the properties, for the use of such properties in the regulated portion of its business.

Although, in the course of examination by different counsel, the witness referred to his "50-50" allocation as mak-

ing a "contribution" to the regulated business and as a "fee" for the privilege of using the equipment and as a "rental credited to the regulated business", he definitely stated that, if his suggestion were adopted by the Commission, whatever amount were "contributed" would go to *return and depreciation.* He said (R. VIII, 3857):

> If you take some of the profits from the non-regulated business and credit to the costs of the other business considered as a rental charge for the privilege of using the facilities, you can consider that it has contributed *to return and to depreciation.* (Emphasis supplied.)

Thus, when Biddison suggested a "contribution", "fee", or "rental" of $500,414 as a fair payment by the direct sales for the use of the properties, he clearly meant that it would be a part of the *return* eventually allowed by the Commission. Nowhere in the record is there any testimony that a fair allocation of the net revenue from direct sales of $1,000,828 "would be to treat one-half of it as derived from direct sales". It is apparent, therefore, that, when the court below made the computation by which it arrived at the conclusion that an allocation would yield petitioners only $319,656 net earnings, after taxes, on their direct sales, it misconceived the effect of Biddison's suggested contribution of $500,414 *to return.*

Adopting Biddison's suggested formula and his "businessman's judgment" of a reasonable contribution, "to depreciation and return", we find that petitioners were deprived of at least $319,656 net earnings after taxes, over and above return, by the Commission's failure to make an allocation. This is demonstrated by the following computations:

Gross revenue from direct sales (Ex. 251, R. XIII, 5947, L. 23, Col. F)	$1,500,527
Operating expenses, depreciation, etc., allocable to direct sales (R. XIII, 5947, lines 25 to 36, Col. F)	$ 699,699
Available for income tax, return, and excess earnings	$1,000,828
Contribution to depreciation and return	$ 500,414
Available as excess earnings (above return)	$ 500,414
Federal income taxes on $500,414 (in the percentage of taxes shown on the books which the $500,414 bears to total earnings)	$ 180,758
Earnings on direct sales *in excess* of amount included in return (on entire business) after expenses of operation, taxes and contribution to depreciation *and return*	$ 319,656

The court below also misinterpreted the testimony of the Commission's witness Shattuck, who had a different approach to the problem of allocation. The court below said (R. XVI, 7212):

> Under the Commission's order, the petitioners are allowed a 6½% return ($4,363,925) on their entire business. Under the method of allocation proposed by an expert witness of the Commission, $4,017,878 of the return would be attributable to sales at wholesale (subject to regulation), and $346,047 to direct industrial sales (not subject to regulation).

Shattuck allocated to direct sales all charges of every kind which he thought should be borne by such sales, including Federal income taxes, and arrived at a total figure of $823,922. His testimony and exhibit (Ex. 263. R. XVI, 6883) stopped at this point. He regarded "return" as an item of "cost of service" and said he could go no further with his allocation until the Commission had determined

the "return". He stated, however, the method he would use if he knew what the amount of return would be (R. VIII, 4002).

If we adopt his method, we find that, after his total costs allocated to direct sales, $823,922, are deducted from the undisputed amount of gross revenue from direct sales, $1,500,527, the company earned on its direct sales the sum of $676,605. If we subtract from this amount the $346,047 which the court below found was the amount which the order permitted as an earning on direct sales, we find that the Commission's failure to make an allocation deprived petitioners of earnings in the amount of at least $330,558 per year on their sales not subject to regulation. This is demonstrated by the following computation:

Gross revenue from direct sales (Ex. 251, R. XIII, 5947, L. 23, Col. F)	$1,500,527
Total expenses, depreciation, and taxes allocated by Shattuck to direct sales (Ex. 263, L. 5, Col. E, R. XVI, 6883)	$ 823,922
Net earnings from direct sales	$ 676,605
Amount of 6½% return allocated to direct sales by the court below, *not by the Commission or by any witness*	$ 346,047
Net earnings from direct sales over and above expenses of operation, depreciation, taxes, and share of 6½% return	$ 330,558

Pursuing another approach, it appears that the Commission's failure to make appropriate findings and allocations deprived petitioners of at least $330,982 per year net revenue from direct sales after all expenses, share in permitted return, and taxes.

In Shattuck's exhibit 263 (R. XVI, 6883), he allocated to direct sales, a total operating expense of $823,922. This includes an allocation of depreciation, taxes (including Federal income taxes) and all other operating revenue deductions, but does not include return on investment. The allocation of $823,922 represents 7.92% of the entire allocated expenses of $10,399,651. Applying that same percentage to the permitted return ($4,363,925), that portion of the so-called "return" allocated to direct sales would be $345,623, which, added to the operating cost of $823,922, would result in a total "cost", including return, taxes, and depreciation, of $1,169,545. Subtracting that cost from the item of $1,500,527, the net earnings from direct sales to which Petitioners are entitled *over and above return*, is found to be $330,982.

The necessity of making findings and allocations to avoid injury to the petitioners can likewise be illustrated by still another approach:

It is uncontradicted that the gross revenue from the direct sales was $1,500,527.89. Biddison found that the operating cost allocable to these sales was $499,698.91, leaving, before taxes, $1,000,828.98 (R. VIII, 3873). Shattuck's estimate of cost attributable to direct sales, excluding taxes, would indicate an operating expense of $539,384.16 and a net, before taxes, of $960,143.03. Thus, it is clear that petitioners had, before taxes, operating profits from their direct sales of at least $960,143.03, which should have been set apart as unregulated revenue; whereas, the Commission, in fact, blanketed the whole of this revenue into its unit consideration of petitioners' business in arriving at the figure of $5,094,384 found to be "available for rate reduction".

We do not concede that the Commission's "cost of service" method of allocation (now under review by this Court

in number 379 October term, 1944), which Biddison and Shattuck attempted to follow, is a valid substitute for a proper separation of property according to its use. The conclusions and calculations of these witnesses have been discussed in order to demonstrate the fallacy in the reasoning of the court below and also to illustrate that allocations could have been made by the Commission, and that its failure to make appropriate findings and allocations worked a substantial injury to petitioners.

The exact injury is not reflected in the record and is impossible of definite determination in the absence of the required findings by the Commission. That injury did result from the Commission's failure to discharge its statutory duty is clear, however, and is emphasized by certain additional facts:

In the Hugoton Field in Kansas, Panhandle Eastern owned a particular group of thirteen producing wells, the gas from which was sold to Argus Natural Gas Company, operating in Kansas. The wells were not even physically connected with any part of petitioners' transmission system but were connected with the gathering system of Argus Natural Gas Company (R. I, 255-256; XIII, 5893; IX, 4133). This part of petitioners' business was beyond the jurisdiction of the Commission under Section 1(b) of the Natural Gas Act, not only because of its intrastate character, but also because it was essentially production.

The revenue derived from the sales of gas from the thirteen wells to the Argus Natural Gas Company, $67,365.40 for the year 1941 (R. XIII, 5707) was all included in the Commission's unit consideration of petitioners' entire business in determining the amounts which should be retained by the petitioners in the form of net revenue available for its 6½ per cent return upon the allowed rate base.

The Commission made no findings addressed to the evidence bearing on allocation examined by the court below; it made no segregation or any findings showing what the result of a segregation, if made, would be; and it made no findings in support of the conclusion (imputed to it by the court below (R. XVI, 7212) but not found in the opinion or findings of the Commission) that, "if a segregation had been made, it would not materially have affected the result".

Furthermore, the court below completely ignored the fact that, in arriving at their respective estimates of "cost of service" allocable to the unregulated sales, both the witness for the Commission's staff and the witness for petitioners had made *pragmatic adjustments* which were not reviewed by the Commission, and *upon which the Commission had made no findings whatever*. The absence of this essential element of the legislative process delegated to the administrative body appears to have been completely overlooked by the court below. The majority opinion held (R. XVI, 7212) that:

> • • • a failure of the Commission to give proper effect to that fact [the fact that the revenues of the company derived from direct sales to customers are not subject to regulation] unless arbitrary or capricious, does not, we think, deprive the Commission of its jurisdiction to make a rate order with respect to sales which are subject to regulation.

Judge Riddick, dissenting, expressed the view (R. XVI, 7218) that:

> In this situation it seems to me idle to inquire whether the Commission's order, call it a "pragmatic adjustment" or what-not, does or does not result in confiscation of petitioners' property or whether it is less or more favorable to petitioners than would have been the case had the Commission confined itself to its per-

mitted field. It is enough to require a remand of this proceeding that the Commission has exceeded the statutory limitation on its powers.

We submit that Judge Riddick was clearly correct and that the holding of the majority was error. The decisions of this court are uniform in holding that, where part of a regulated business is not subject to regulation, the regulatory body must make an appropriate separation or allocation of property, revenue, and expense as between the regulated and non-regulated transactions.[17]

The rule was stated in the *Minnesota Rate Cases*, 230 U. S. 352, 435, as follows:

> Where the business of the carrier is both interstate and intrastate, the question whether a scheme of maximum rates fixed by the state for intrastate transportation affords a fair return *must be determined by considering separately the value of the property employed in the intrastate business* and the compensation allowed in that business under the rates prescribed. This was also ruled in the Smyth Case (id. p. 541). The reason, as there stated, is that the state cannot justify unreasonably low rates for domestic transportation, considered alone, upon the ground that the carrier is earning large profits on its interstate business, and, on the other hand, the carrier cannot justify unreasonably high rates on domestic business because only in that way is it able to meet losses on its interstate business. • • •

[17] *Smith* v. *Illinois Bell Telephone Co.*, 282 U. S. 133, 150;
Minnesota Rate Cases (*Simpson* v. *Shepard*), 230 U. S. 352, 435, 437;
Banton v. *Belt Line Ry. Corp.*, 268 U. S. 413, 421;
Northern Pacific Railway Co. v. *McCue*, 236 U. S. 585, 596-597;
United Fuel Gas Co. v. *Railroad Commission*, 278 U. S. 300, 319;
Northern Pacific Rwy. v. *Dept. Public Works*, 268 U. S. 39; 43-44.

> When rates are in controversy, it would seem to be *necessary* to find a basis for a division of the total value of the property independently of revenue, and this must be found in the use that is made of the property. That is, there should be assigned to each business that proportion of the total value of the property which will correspond to the extent of its employment in that business. (Emphasis supplied.)

In *Smith* v. *Illinois Bell Telephone Company*, 282 U. S. 133, property of the company was used both for intrastate and interstate business. This Court said (pp. 147, 149):

> At the threshold of the discussion, we are met with the fact that, in these findings, the commission and the court made no distinction between the intrastate and the interstate property and business of the company. It appears that the property of the company in Chicago is used to render (1) what is called exchange service, all of which is intrastate, (2) intrastate toll service over its own lines and under arrangements with companies other than the American Company, and (3) interstate toll service, which includes all the toll service rendered under arrangements with the American Company. The company introduced evidence separating the intrastate and interstate business and also the intrastate exchange business. While the court regarded these computations as correct, and approved the method in which they had been made, still *the court made no specific findings* based on a separation of the intrastate and interstate property, revenues and expenses, but determined the issue on the basis of the total Chicago property of the company.
>
> * * * * *
>
> The separation of the intrastate and interstate property, revenues and expenses of the company is important not simply as a theoretical allocation to two branches of the business. *It is essential* to the appropriate recognition of the competent governmental authority in each field of regulation. * * * The proper

> regulation of rates can be had only by maintaining the limits of state and federal jurisdiction, and this can not be accomplished unless there are findings of fact underlying the conclusions reached with respect to the exercise of each authority. In view of the questions presented in this case, the validity of the order of the state commission can be suitably tested only by an appropriate determination of the value of the property employed in the intrastate business and of the compensation receivable for the intrastate service under the rates prescribed. * * * As to the value of that property, and as to the revenue and expenses incident to that business, separately considered, *there should be specific findings. Railroad Commission* v. *Maxcy*, 281 U. S. 82, 83, 74 L. Ed. 717, 718, 50 S. Ct. 228. (Emphasis supplied.)

In *Banton* v. *Belt Line Railway Corp.*, 268 U. S. 413, the Court was considering an order of the New York Public Service Commission establishing maximum joint fares on street railways in New York City, of which appellee formed a part. It alleged that the order deprived it of any return on the fair value of its property used to perform the service covered by the joint fare. On the question of allocation, this Court said (page 421):

> There is involved only the rates applicable to a part of the company's business. In this respect, the case is similar to *Northern Pacific Railway* v. *North Dakota*, 236 U. S. 585; *Norfolk & Western Ry.* v. *West Virginia*, 236 U. S. 605, and *Northern Pacific Railway* v. *Department of Public Works of Washington*, 268 U. S. 39. The applicable law is plain. The State is without power to require the traffic covered by the fare enjoined to be carried at a loss or without substantial compensation over its proper cost. And such cost includes not only the expenditures, if any, incurred exclusively for that traffic, but also a just proportion of the expenses incurred for all traffic of which that in question forms a part. The

cost of doing such business is not, and properly cannot be, limited to the amount by which total operating expenses would be diminished by the elimination of, or increased by adding, the transfer passengers in question. It would be arbitrary and unjust to charge to that class of business only the amount by which the operating expenses were, or would be, increased by adding that to the other traffic carried. Outlays are none the less attributable to transfer passengers because also applicable to other traffic. Operating expenses which are incurred on account of all passengers carried, and which are not capable of direct allocation to any class, should be attributed to the transfer passengers in question in like proportion as such expenses are fairly chargeable to other passengers receiving like service.

In *United Fuel Gas Co.* v. *Railroad Commission of Kentucky*, 278 U. S. 300, a final decree of the District Court denying an injunction restraining the Railroad Commission from enforcing rates for natural gas in certain communities in Kentucky was under review. In considering the treatment of certain facilities of the gas company which were used jointly in the regulated business of distributing gas to consumers and in the unregulated business of extracting gasoline from the natural gas, this Court said (pages 319-320):

In the process of extracting gasoline from natural gas, the gas flows from the field to the extraction plant, where the gasoline is taken out, the residual gas being returned to the transmission system for distribution to consumers. In the production of this gasoline, therefore, joint use is made of the gas, gas field and certain facilities of the gas company. This joint use requires a prorating of joint investment and expenses and of the return from the joint enterprise.

D. The order of the Commission should be set aside.

The failure of the Commission to make the necessary separation of property, revenue, and expenses as between the sales subject to regulation and the sales not subject to regulation renders its order null and void; under the provisions of the Natural Gas Act, the order should be set aside. Although Section 19(b) of the Natural Gas Act (Appendix A) provides that, upon review, the Court may modify an order of the Commission, relief to petitioners by modification of the order is impossible here because the legislative process is incomplete and forms no adequate basis upon which the Court can modify the order without departing from the judicial function and performing the legislative function.

The necessary separation, segregation or allocation requires, not only an examination of the record and the weighing of the ultimate facts shown by the evidence introduced by the Commission's staff and by petitioners on the subject of allocation, but also requires a careful examination of the numerous pragmatic adjustments and allocations made by the witnesses with respect to items of property, revenue, and expense. These were made purely on the judgment of the witnesses as to what would be fair and equitable under the circumstances. Where there is a conflict in the judgment of the witnesses, such conflict must be resolved. Where there is no conflict, the appropriateness of the result must still be reviewed. If the Commission finds that an appropriate allocation is not presented by the witnesses, it is still under a duty to make findings and appropriate allocations.[18]

These are matters requiring expertise, forming part of the legislative process which Congress has delegated to the Federal Power Commission. They are part of the rate

[18] See argument supra, pages 27-29, 39-42.

making function. The function of the court with respect thereto can be performed only after the administrative body has examined and weighed *all of the pertinent evidence* and made adequate findings.[19]

In *Newton* v. *Consolidated Gas Co.*, 258 U. S. 165, this Court said (Page 177):

> Rate making is no function of the courts and should not be attempted either directly or indirectly.

In *Keller* v. *Potomac Electric Co.*, 261 U. S. 428, the Court was considering the Public Utilities Law of the District of Columbia, which established a commission and provided that any person dissatisfied with an order of the Commission "may commence a proceeding in equity in the Supreme Court of the District of Columbia * * * to vacate, set aside or modify any such decision" and that the same should be tried "as are equity proceedings in said court." Mr. Chief Justice Taft said (pages 440-441):

> What is the nature of the power thus conferred on the District Supreme Court? Is it judicial or is it legislative? Is the court to pass solely on questions of law, and look to the facts only to decide what are the questions of law really arising, or to consider whether there

was any showing of facts before the Commission upon which, as a matter of law, its finding can be justified? Or has it the power, in this equitable proceeding to review the exercise of discretion by the Commission and itself raise or lower valuations, rates, or restrict or expand orders as to service? Has it the power to make the order the Commission should have made? If it has, then the court is to exercise legislative power in that it will be laying down new rules, to change present conditions and to guide future action and is not confined to definition and protection of existing rights. In *Prentis* v. *Atlantic Coast Line Co.*, 211 U. S. 210, 226, we said:

> "A judicial inquiry investigates, declares and enforces liabilities as they stand on present or past facts and under laws supposed already to exist. That is its purpose and end. Legislation on the other hand looks to the future and changes existing conditions by making a new rule to be applied thereafter to all or some part of those subject to its power. The establishment of a rate is the making of a rule for the future, and therefore is an act legislative not judicial in kind. . . ."

In *Interstate Commerce Commission* v. *Inland Waterways Corp.*, 319 U. S. 671, Mr. Justice Jackson said (pages 691-692):

> Our function does not permit us either to prescribe or approve rates, and our decision carries no implication or approval of any rates here involved. Nor are we at liberty to prescribe general attitudes the Commission must adopt towards the exercise of discretion left to it rather than to courts. We decide only whether the Commission has acted within the power delegated to it by law.

II.

THE COMMISSION CANNOT, CONSISTENTLY WITH THE NATURAL GAS ACT AND WITH DUE PROCESS OF LAW, RESTRICT THAT PART OF PETITIONERS' EARNINGS DERIVED FROM THEIR PRODUCING AND GATHERING PROPERTIES TO 6½ PER CENT ON THE DEPRECIATED ORIGINAL COST OF SUCH PROPERTIES.

By Section 1(b)[20] of the Act, Congress expressly provided that the provisions of the Act *shall not apply to the production or gathering of natural gas.* The same section provides that the Act shall apply to "the sale in interstate commerce of natural gas for resale * * *." Considering the latter clause in isolation, it might appear that the Commission has jurisdiction to fix the price which the producer of gas is entitled to receive, after he has reduced the gas to possession, where he sells for interstate transportation and resale.

When, however, the provisions of Sections 1(b) are considered together and in their relation to the whole scheme of regulation, particularly the declared policy set forth in Section 1(a) of the Act, the conclusion is inescapable that the intent of Congress was to exclude from regulation the entire business of production and gathering, including the interstate sale of gas by the producer thereof even though it could constitutionally regulate such sale; likewise, to exclude from regulation the production and gathering phase of the business of a "natural-gas company" engaged in interstate transportation and sale.

Section 1(a) declares that "the business of transporting and selling natural gas for ultimate distribution to the public is affected with a public interest." Thus, it is the

[20] Appendix A.

service of transporting gas to the interstate markets that Congress declares to be imbued with a public interest and to require regulation. There is nothing in the Act or in its legislative history indicating that Congress found that the prices of natural gas prevailing at the points of production were exorbitant or that the public interest required federal regulation of such prices.

Where Congress has authorized price fixing with respect to *a commodity*, as distinguished from *a service*, it has not delegated to the administrative agency freedom of action within the broad limits of the conventional rate-making guide "just and reasonable", but has provided specific standards peculiarly adapted to the particular commodity.[21]

In excluding production and gathering from the application of the provisions of the Act, Congress might well have had in mind the peculiar nature of this phase of the natural gas business. Mr. Justice Jackson said, in his dissenting opinion in the *Hope* case, that this phase of the business is "more erratic and irregular and unpredictable in relation to investment than any phase of any other utility business • • • Gas itself is tangible, possessible, and does have a market and a price in the field" (320 U. S. 591, 647). He recognized that the value of gas reserves lies in discovery, possibility of discovery and market, and that this value has little, if any, relationship to the ordinary rate case concept of rates or prices for services rendered by means of replaceable property.

The exclusion of production and gathering of natural gas from the application of the provisions of the Act is not qualified so as to apply only to producers who do not also have transportation facilities. The Commission can no

[21] Cf. Agricultural Marketing Agreement Act of 1937, 7 U.S.C., Sections 608c et seq.

Bituminous Coal Act of 1937, 15 U.S.C., Sections 828 et seq.

more regulate petitioners' production and gathering than it can regulate the numerous producers of natural gas who sell their production to petitioners.[22]

It was incumbent on the Commission to determine the field price or actual field value of natural gas in the areas in which petitioners produce their gas, to eliminate petitioners' leaseholds and producing and gathering facilities from the rate base, to disallow expenses of gathering and production—in short, to segregate completely the production phase of petitioners' business from the regulated phase thereof[23]—and to allow to petitioners as an expense item the market price or actual field value for all gas produced by petitioners and taken into their main transmission system.

There was evidence in the record upon which the Commission could have found the market price or field value of petitioners' gas at the well. It was stipulated that in the Hugoton field, Panhandle Eastern was purchasing from numerous companies at 4¢, from others at 4½¢ and from still others at 5¢ per MFC (R. III, 1107). It was shown that, in the Panhandle field, Panhandle Eastern had certain gas purchase contracts at prices less than 4¢ per MCF. The witness, Biddison, said these contracts had a value to Panhandle Eastern in excess of $1,500,000, because they were long time contracts, made when low field prices existed, at purchase prices of 2½¢ and 3½¢ per MCF (R. III, 1095-1098), whereas, in his opinion, 4½¢ represented the general field price for high pressure sweet gas at the wells (R. III, 1099) and 4½¢ was "a fair measure of its present well head value" (R. III, 1101).

---

[22] Petitioners purchase approximately fifty per cent of the gas they transport (R. IX, 4155), under contracts which are for the life of the production. Therefore, the reserves of natural gas of these producers are effectively dedicated to petitioners' system.

[23] Cf. *Smith* v. *Illinois Bell Telephone Co.*, 282 U. S. 133, 148-150.

It was further shown by this witness that Panhandle Eastern and other gas companies were then paying their royalty owners in the Panhandle field on a basis of 4½¢ per MCF; that the royalty provision was ordinarily for ⅛th of the product and that "compensation is generally made in cash at what is construed to be the value per unit of the amount of royalty gas * * * produced" (R. III, 1100-1101). The average unit price paid by Panhandle Eastern to its royalty owners during the year 1941 was approximately 4.5¢ per MCF for their ⅛th of the gas produced. The total volume of gas produced during the year was 30,059,021 MCF (R. XIII, 5713). One-eighth of that volume, 3,757,377 MCF, represented the interest of the royalty owners in such production. For that royalty interest petitioners paid their royalty owners $171,043.82 (R. XIII, 5679). This was an average of 4.5¢ per MCF. These payments to royalty owners were allowed by the Commission, as an operating expense, without criticism.

Petitioners did not attempt during the hearings to segregate their production and gathering properties and the revenues and expenses related thereto; this was the statutory duty of the Commission. An alternative approach which seemed to lead to substantially the same result (see *infra* pages 53-54) was petitioners' contention that, while the operations might all be included within the Commission's rate structure, the rate base valuation of leases and other assets relating solely to production and gathering must be consistent with their legal status as unregulated properties.

But the Commission ignored its statutory duty and made no attempt to segregate petitioners' production and gathering facilities, or to determine separately the value of the gas and a reasonable allowance for transportation thereof. It chose the easier, though unwarranted, course of treating petitioners' properties, regulated and unregu-

lated, as one inseparable unit. It not only failed to segregate the production and gathering phase of petitioners' business, but it actually included in the rate base all of petitioners' production and gathering facilities and gas leaseholds at only their original cost less reserves for depreciation and depletion. These leaseholds were carried on petitioners' books at only $955,096, although petitioners were prepared to show, and offered to prove, that those leaseholds had a market value on June 1, 1941, of $8,339,722.

The Commission's action in the case at bar in assuming jurisdiction over matters excluded from the application of the provisions of the Natural Gas Act was based on an erroneous concept of its powers under the Act. The order is, moreover, peculiarly subject to attack in these proceedings as a denial of due process because the Commission, through its trial examiner, excluded evidence which was admissible in reaching a determination with respect to the value of petitioners' gas leaseholds and also the value of the commodity in the fields where produced.

The excluded evidence was tendered through a witness of many years' experience in the Panhandle and Hugoton fields. During this experience he had bought and sold many leases, both on his own behalf and as broker. He was not in any way connected with petitioners. His analysis of the market value was based on a knowledge of the locations of the various wells and an examination of each of the leases. He took into consideration the unitization agreements which Panhandle Eastern had obtained from its lessors, the subjection to outside drainage, the productivity of each drilled lease, the productivity of the undrilled leases as indicated by nearby production, the rock pressures, and other matters appropriate for consideration in arriving at market value (R. IX, 4190). After having reviewed each lease separately, he placed it in a certain classification representing what was, in his opinion, the

then market value of the lease "from a willing seller to a willing buyer" (R. IX, 4195). He then tabulated the number of leases in each classification, fixing a market value as to each classification ranging in the Panhandle Field from $5 per acre to $100 per acre and in the Hugoton Field from $5 per acre to $35 per acre (R. IX, 4199, 4201). In the tendered narrative of his testimony, he stated (R. I, 4198):

> In valuing the leases of Panhandle Eastern Pipe Line Company, I have not considered as a value factor the fact that the wells drilled thereon are connected to pipe lines; nor have I attempted to place a value upon the wells or equipment used in connection therewith. The values shown in the tabulations reflect merely the present market value of the leases, according to my judgment. It is my opinion that if this acreage reserve owned by the Panhandle Eastern Pipe Line Company in the two fields was available, it could unquestionably secure an outlet for its gas, exclusive of any pipe line now in the fields and could be sold at the valuation fixed by me.

The valuation of $8,339,722 placed by the witness upon petitioners' 264,971 acres of gas leaseholds shows an average value per acre of approximately $31, whereas the average value per acre under the Commission's valuation was $3.60.

While the Natural Gas Act excludes the production and gathering of gas from the Commission's jurisdiction and permits it to exercise jurisdiction only over the interstate transportation of gas and over certain (not all) sales thereof in interstate commerce, the Commission has, by its order herein, found that petitioners are entitled to a price in the field for their gas, determined wholly on a consideration of the original cost of their leaseholds, less accruals for depletion and the application thereto of a 6½ per cent rate of return.

It is obvious that, if petitioners' leaseholds can now be sold for more than eight million dollars, an allowance of an earning on a value of less than one million dollars is wholy erroneous. It is to be assumed that the market value of the leaseholds is largely reflected in the market price, or the value of the gas, in the respective areas where it is produced. Such market price or field value is determined by many economic conditions, field transactions and local competitive factors having no relation to the original cost of the leaseholds.

This fact was pointed out by Mr. Justice Jackson in the *Hope* case and emphasized with a most vivid illustration. He said (320 U. S. 591, 649):

> Let us assume that Doe and Roe each produces in West Virginia for delivery to Cleveland the same quantity of natural gas per day. Doe, however, through luck or foresight or whatever it takes, gets his gas from investing $50,000 in leases and drilling. Roe drilled poorer territory, got smaller wells, and has invested $250,000. *Does anybody imagine that Roe can get for his gas five times as much as Doe because he has spent five times as much?*" (Emphasis supplied.)

A comparable illustration is presented by actual facts in this case. Evidence admitted by the trial examiner showed that, for 1940 (the last full year for which statistics were available at the time), petitioners paid for purchased gas an average field price of 3.8429¢ per MCF, whereas, for their own produced gas, under the Commission's formula, petitioners would have received only 2.9924¢ per MCF. Comparable figures for the test year, 1941, (based partly on estimates) were: 3.8336¢ per MCF paid by petitioners for purchased gas and 2.8272¢ per MCF, computed under the Commission's formula, realizable for gas which they produced.[24]

[24] See computations with record references, Appendix C.

This discrimination appears in more glaring form in the situation with respect to thirty-four wells jointly owned by petitioners and others (R. IX, 4153). Petitioners buy from the co-owners of these wells the share of such co-owners in the production at 5¢ per MCF (R. III, 1107). The result is that, for gas coming out of the same well, petitioners are allowed for their share, under the Commission's order, only 2.9924¢ per MCF, based on 1940 actual figures, or 2.8272¢ per MCF, based on 1941 figures, whereas, their co-owners receive 5¢ per MCF for their share. The Commission found no fault with the prices paid for purchased gas, in its allowance of operating expenses.

The evidence also showed that petitioners owned a particular group of thirteen producing wells, the gas from which was sold to Argus Natural Gas Company for distribution in nearby towns in Kansas. The wells were not even physically connected with any part of petitioners' transmission system, but were connected with the gathering system of Argus Natural Gas Company (R. I, 255-256; XIII, 5893; IX, 4138). The revenue derived from sales of gas from these wells to the Argus Natural Gas Company amounted to $67,365.40 for the year 1941. The average price paid by Argus Natural Gas Company to petitioners for this gas at the wellhead was 6.13¢ per MCF (R. XIII, 5707, L. 32). The Commission included all of these wells and the revenue derived therefrom in its unit treatment of petitioners' business. It also ignored this further evidence of the market value of gas at the wellhead.

Had the Commission admitted petitioners' evidence showing the market value of their gas leaseholds to be $8,339,722 and adopted that valuation in the rate base, the increased return thereon, applied to their production in 1941, the test year, would yield 1.8411¢ per MCF, which, added to the 2.8272¢ per MCF realizable under the Commission's valuation (as demonstrated in Appendix C) would have allowed petitioners for their gas at the well a price of 4.6683¢ per

MCF, as compared with 5¢ per MCF paid by petitioners to their co-owners of the jointly owned wells, 3.8336¢ per MCF average price paid by petitioners for gas purchased from other producers, 4½¢ per MCF paid by petitioners for royalty gas, and 6.13¢ per MCF paid petitioners by Argus Natural Gas Company for gas at the well.

We have demonstrated that the Commission's action in limiting the sale price of petitioners' gas for resale so as to provide an over-all return of 6½% on the depreciated cost of petitioners' properties, including those devoted to production and gathering of natural gas, and excluding petitioners' tendered evidence as to the market value of petitioners' gas leaseholds, was arbitrary, discriminatory, lacking any rational basis and amounted to a denial of due process. We submit that such action also constituted an exercise of jurisdiction over production and gathering of natural gas in violation of the Natural Gas Act.

CONCLUSION.

It is respectfully submitted that the judgment of the Circuit Court of Appeals be reversed and that the order of the Federal Power Commission be set aside.

APPENDIX A.

The pertinent provisions of the Natural Gas Act of 1938, 52 Stat. 821, et seq. (15 U. S. C. Sec. 717) are as follows:

SEC. 1. (a) As disclosed in reports of the Federal Trade Commission made pursuant to Senate Resolution 83 (Seventieth Congress, first session) and other reports made pursuant to the authority of Congress, it is hereby declared that the business of transporting and selling natural gas for ultimate distribution to the public is affected with a public interest, and that Federal regulation in matters relating to the transportation of natural gas and the sale thereof in interstate and foreign commerce is necessary in the public interest.

(b) The provisions of this act shall apply to the transportation of natural gas in interstate commerce, to the sale in interstate commerce of natural gas for resale for ultimate public consumption for domestic, commercial, industrial, or any other use, and to natural-gas companies engaged in such transportation or sale, but shall not apply to any other transportation or sale of natural gas or to the local distribution of natural gas or to the facilities used for such distribution or to the production or gathering of natural gas.

* * * * *

SEC. 5. (a) Whenever the Commission, after a hearing had upon its own motion or upon complaint of any State, municipality, State commission, or gas distributing company, shall find that any rate, charge, or classification demanded, observed, charged, or collected by any natural-gas company in connection with any transportation or sale of natural gas, subject to the jurisdiction of the Commission, or that any rule, regulation, practice, or contract affecting such rate, charge, or classification is unjust, unreasonable, unduly discriminatory, or preferential, the Commission

shall determine the just and reasonable rate, charge, classification, rule, regulation, practice, or contract to be thereafter observed and in force, and shall fix the same by order: *Provided, however,* That the Commission shall have no power to order any increase in any rate contained in the currently effective schedule of such natural-gas company on file with the Commission, unless such increase is in accordance with a new schedule filed by such natural-gas company; but the Commission may order a decrease where existing rates are unjust, unduly discriminatory, preferential, otherwise unlawful, or are not the lowest reasonable rates.

* * * * *

SEC. 6. (a) The Commission may investigate and ascertain the actual legitimate cost of the property of every natural-gas company, the depreciation therein, and, when found necessary for rate-making purposes, other facts which bear on the determination of such cost or depreciation and the fair value of such property.

* * * * *

SEC. 19. (b) Any party to a proceeding under this act aggrieved by an order issued by the Commission in such proceeding may obtain a review of such order in the circuit court of appeals of the United States for any circuit wherein the natural-gas company to which the order relates is located or has its principal place of business, or in the United States Court of Appeals for the District of Columbia, by filing in such court, within sixty days after the order of the Commission upon the application for rehearing, a written petition praying that the order of the Commission be modified or set aside in whole or in part. A copy of such petition shall forthwith be served upon any member of the Commission and thereupon the Commission shall certify and file with the court a transcript of the record upon which the order complained of was entered. Upon the filing of such transcript such court shall have exclusive jurisdiction to affirm, modify, or set aside such order in whole or in part.

No objection to the order of the Commission shall be considered by the court unless such objection shall have been urged before the Commission in the application for rehearing unless there is reasonable ground for failure so to do. The finding of the Commission as to the facts, if supported by substantial evidence, shall be conclusive. If any party shall apply to the court for leave to adduce additional evidence, and shall show to the satisfaction of the court that such additional evidence is material and that there were reasonable grounds for failure to adduce such evidence in the proceedings before the Commission, the court may order such additional evidence to be taken before the Commission and to be adduced upon the hearing in such manner and upon such terms and conditions as to the court may seem proper. The Commission may modify its findings as to the facts by reason of the additional evidence so taken, and it shall file with the court such modified or new findings, which if supported by substantial evidence, shall be conclusive, and its recommendation, if any, for the modification or setting aside of the original order. The judgment and decree of the court, affirming, modifying, or setting aside, in whole or in part, any such order of the Commission, shall be final, subject to review by the Supreme Court of the United States upon certiorari or certification as provided in sections 239 and 240 of the Judicial Code, as amended (U. S. C., title 28, secs. 346 and 347).

APPENDIX B.

Names of the nineteen industrial customers (Ex. 58, Schedule 3, R. IX, 4293) purchasing gas directly from petitioners, with locations of plants numbered to correspond with numbered locations superimposed upon map made a part of this appendix, which map was introduced as Chart No. 1 of Exhibit 65, R. X, 4559.

Customer Number	Name of Customer	Location of Customer's Plants Served
		Kansas
1	Phillips Petroleum Company	(a) Sharpe (b) Paola
2	State of Kansas	Osawatomie
		Missouri
3	United Brick and Tile Company	Vale
4	W. J. Small Company, Inc.	(a) Liberty (b) Boonville
5	Phillips Petroleum Company	(a) Harrisonville (b) Leeton (c) Jefferson City
6	Missouri Power and Light Company	(a) Jefferson City (b) Boonville (c) Moberly (d) Mexico
7	Fayette Brick and Tile Company	Fayette
8	Edwards-Conley Brick and Tile Company	Columbia
9	Harbison-Walker Refractories Company	(a) Fulton (b) Vandalia
10	Mexico Refractories Company	Mexico
11	Wellsville Fire Brick Company	Wellsville
12	North American Refractories Company	Farber
13	Walsh Refractories Corporation	Farber
14	Freiling Greenhouses	Hannibal
15	Universal Atlas Cement Company	Hannibal

OCTOBER TERM, 1944

NO. 296

PANHANDLE EASTERN PIPE LINE COMPANY, ILLINOIS NATURAL GAS COMPANY, AND MICHIGAN GAS TRANSMISSION CORPORATION,

Petitioners,

vs.

FEDERAL POWER COMMISSION, CITY OF DETROIT, COUNTY OF WAYNE, MICH., MICHIGAN CONSOLIDATED GAS COMPANY, AND MICHIGAN PUBLIC SERVICE COMMISSION,

Respondents.

ON WRIT OF CERTIORARI TO THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE EIGHTH CIRCUIT.

REPLY BRIEF OF PETITIONERS.

The argument in respondents' brief presents their contentions under four points. We will reply herein to each of these points in the order stated by respondents.

ARGUMENT.

I.

THE COMMISSION'S FINDING THAT NO ALLOCATION WAS NECESSARY IN THE CIRCUMSTANCES OF THIS CASE WAS ARBITRARY AND UNREASONABLE AND DOES NOT HAVE A SUBSTANTIAL BASIS IN THE RECORD.

Petitioners pointed out in their brief (pages 23-27) that the Commission's former findings are silent on the question of allocation but that its reasons for making no allocation are set forth in its opinion (R. I. 33-34). They pointed out that those reasons form no adequate basis for the Commission's failure to make an allocation but tended, rather, to show the necessity of making an allocation.

Respondents concede (Resp. Brf. P. 12) that "petitioners presented an allocation study (Ex. 251; R. XIII, 5947-5955) through their witness Biddison," and respondents base their entire discussion of allocation on his testimony and exhibits. Respondents make no mention of the fact that the Commission's staff also presented a basis for allocation through the Commission's witness Shattuck (Ex. 263; R. XVI, 6883-6887 and explanatory testimony R. VIII, 3994-4002).

Respondents criticize the result shown by Biddison's allocation of operating expenses. They fail to mention the fact that the Commission's own witness Shattuck, applying a somewhat different method of allocation, reached substantially the same result.

Respondents state in note 8 at page 13 of their brief that Biddison's result "appears even more incongruous in the

light of the fact that petitioners' rates for direct industrial gas in 1941 averaged only 17¢ per MCF, as compared with $1.00 for residential gas, 82.4¢ for commercial gas, and 28.7¢ for gas sold to other utilities." This statement, without explanation, is very misleading. Respondents well know that petitioners have no residential or commercial sales, as such. Respondents derived these figures from a "pro forma" statement of net operating revenue for 1941 in which were included sales by Indiana Gas Distributing Corporation, a local Indiana distributing utility not owned in 1941 by any of petitioners here but owned by Columbia Gas and Electric Corporation. Its sales were included because on or about February 6, 1942, prior to the preparation of this "pro forma" statement, Panhandle Eastern had acquired Indiana Gas Distribution Corporation. On or about July 10, 1942, Panhandle Eastern sold this local utility. If the sales of Indiana Gas Distribution Corporation are eliminated, as they should be, the few remaining so-called "residential" and "commercial" sales of petitioners for 1941 are negligible. In obtaining rights of way and easements in the construction of their transmission line, petitioners were required, in some instances, to agree with the owner of the land that he would be provided with gas from the line for his own use. As a result, they are serving such scattered rural customers and employees occupying company houses along the line throughout the eight states through which it passes, but the total revenue from such sales in 1941 was only $9,446.77. The sales designated as "commercial" amounted to only $290.39 (R. XII, 5459).

The purpose of the attack on Biddison's allocation seems to be to create the impression that the Commission considered Biddison's evidence and concluded that it was not reliable. The plain fact is, however, that the Commission's

opinion and its findings make no mention of this evidence or the testimony and exhibits of Commission's witness Shattuck. One of the principal points which petitioners make is the defect in the administrative process by reason of the Commission's *failure to make proper findings on the evidence before it* and the lack of support in the evidence for the Commission's finding that $5,094,384 of petitioners' consolidated gross revenue for 1941 *was available for rate reduction.*

The essence of the order was the requirement that petitioners consolidated gross revenue be reduced by that amount. The fact that the order requires that the reduction be reflected only in rates for gas sold for resale is of minor significance.

The inquiry is directed to the administrative process by which the Commission reached its basic finding that $5,094,384 was available for rate reduction. Respondents admitted in the court below that the Commission treated petitioners' business as subject to the Commission's rate-making powers in its entirety. They said (page 60 of their brief on original argument):

> What the Commission did was to treat the business as a unit, eliminating only the profit *in excess* of a 6½% return on petitioners' entire business (R. 33-34). Under the Commission's order petitioners are allowed a 6½% profit (return) *on all* gas sales, both regulated and unregulated.

The record shows that the Commission had before it evidence of (a) the exact amount of the unregulated sales, (b) the volume of unregulated sales, (c) the exact facilities, and the value thereof, used exclusively in the service of the unregulated sales, (d) the exact facilities, and the value thereof, used exclusively in the service of the regulated sales, (e) a proposed allocation of operating expense sub-

mitted by petitioners, and (f) a proposed allocation of operating expense submitted by the Commission's own staff. This, we think, shows clearly that the Commission's refusal to make an allocation was arbitrary and unreasonable.

Respondents say, however, that, in any event, petitioners were not injured. Petitioners have shown in their brief (pages 29-38) that they were injured, and the point is illustrated with computations from different approaches. We will not restate them here. It will be seen that there is nothing in the quotation from petitioners' brief before the Commission, mentioned in note 13 on page 19 of respondents' brief, inconsistent with petitioners' position here.

II.

THE ABSENCE OF A FORMAL ALLOCATION IN THE INSTANT CASE DOES INVALIDATE THE COMMISSION'S ORDER.

We accept the negative of respondents' point as stated in their brief, but we fail to see the significance of the use of the phrase "a formal allocation," since it is conceded here that no allocation, formal or otherwise, was made by the Commission.

The fact that "The Act does not in terms require an allocation" is of no significance. The controlling fact is that the Act marks out the boundary of the Commission's rate-making powers and excludes from such powers petitioners' direct industrial sales. It does not follow that, as respondents say at page 21 of their brief, "Congress rather obviously left the problem of allocation to the expert judgment of the Commission." No authority is cited for the proposition that a segregation of property or an allocation

is not necessary unless the statute which is the source of the regulatory body's authority specifically requires it.

The fact that Congress, as respondents say, page 21 of their brief, "could have provided for the same regulation over direct industrial sales as it did for interstate sales for resale" does not aid their argument in the slightest degree. Congress expressly provided that "the same regulation" should not apply to both. We have no quarrel with the proposition, stated in note 14, page 21, of respondents' brief, that petitioners' direct industrial sales are not subject to state regulation. Our point is that they were not made subject to the rate-making powers of the Commission under the Natural Gas Act.

In note 16 on page 23 of respondents' brief, respondents, challenging our statement that it is immaterial whether that part of the business of a natural gas company which is not subject to regulation by the Commission is operated at a loss or at a high profit, say:

> A loss might burden the 'regulated' business and a high profit might well be evidence that the 'unregulated' business is not bearing its proper share of the costs.

This very possibility is one of the impelling reasons why courts have held that there must be a separation between the regulated business and the unregulated business where the two are conducted as parts of the same enterprise.

Respondents' further argument that the order requires only a reduction in the rates for resale gas is of no significance here. The injury to the petitioners arises out of the finding that $5,094,384 of their 1941 gross consolidated revenue was *available for rate reduction* and the requirement that they reduce their revenue by that amount.

Judge Ricklick, dissenting below, held that an allocation was necessary in order that the Commission might stay within the confines of its statutory authority. We think that he was right. The only case cited by respondents in support of their argument *contra* is *Lone Star Gas Company* v. *Texas*, 304 U. S. 224. That case, however, is not in point. The ruling of the court was based on its determination that all of the properties of Lone Star Gas Company valued by the Railroad Commission of Texas in fixing the rates complained of were devoted to the intrastate transactions subject to the Commission's jurisdiction and there was no interstate commerce as to which segregation could be required.

All of the other cases relied on by respondents are cited only for the proposition that "a fair division of costs alone is adequate." (Rsp. Brf. P. 27, n. 18). That proposition is vigorously opposed by the petitioners in Number 379, this term. It is not an issue here because, concededly, no allocation or separation of any kind was made. We comment here, however, on the fact that in *Wabash Valley Electric Co.* v. *Young*, 287 U. S. 488, 495, there was a separation of property and, in the two other cases cited, namely, *Banton* v. *Belt Line Railway Corporation*, 268 U. S. 413, and *Houston* v. *Southwestern Telephone Co.*, 259 U. S. 318, the attack was directed to the result of the allocation and not any failure to make a separation of property as between the regulated and the unregulated.

Finally, under this point, respondents urge that the necessity of an allocation disappears if no confiscation is shown. We challenge this proposition and we submit that it is fundamentally unsound. Like the substantial evidence rule, the question of confiscation can be reached only *after* the statutory standards have been applied. We rely upon the holding of this court in *United States, et al.* v. *Carolina*

Freight Carriers Corporation, 315 U. S. 475, wherein Mr. Justice Douglas said:

> Only when the statutory standards have been applied can the question be reached as to whether the findings are supported by evidence.

Respondents place great reliance upon certain remarks of Panhandle Eastern's president to the effect that allocation of cost of service was "theoretical," "unrealistic" and "not practical." (Rsp. Brf. P. 16, 28 n. 19). These remarks were mentioned by the Commission in its opinion (R. I, 34) and by respondents in their briefs below. We fail to see what legal significance such remarks can have in determining the question at issue here but, since respondents appear to lay such emphasis upon them, we ask that the court read the portion of the testimony forming the context from which these remarks were lifted. It will be seen that these remarks were made in criticism of the method of allocation adopted and applied by the Commission in the case of *Colorado Interstate Gas Company*, now under review in Number 379, this term.

In support of their argument that there was no confiscation by reason of the failure to allocate, respondents rest on the proposition that, if the return allowed be reduced by $331,000, "the remaining return would be $4,032,925, slightly in excess of a six per cent rate of return on the overall rate base." (Rsp. Brf., p. 29). They insist that an allowance of only six per cent as a rate of return would not be confiscatory. The defect in this argument lies in the fact that the Commission has not found that a six per cent rate of return on the rate base would provide a fair and reasonable return and, if the Court undertakes to make such a determination here, it will be departing from the judicial

function and engaging in the legislative function of rate-making.[1]

In the case of *Lone Star Gas Company* v. *Texas*, 304 U. S. 224, relied upon by respondents, the facts were different. There, the Railroad Commission of Texas had found that a six per cent rate of return was "a minimum fair rate of return." The jury found that the rates fixed by the Commission were confiscatory. Upon review, this court held that it was error for the Texas Appellate Court to disturb the finding of the jury.

III.

THE COMMISSION EXCEEDED ITS JURISDICTION WITH RESPECT TO PETITIONERS' PRODUCING AND GATHERING FACILITIES.

Respondents assert that petitioners raised the issue as to the jurisdiction of the commission over petitioners' producing and gathering facilities for the first time in petitioners' reply brief in the Court below. While we submit that this issue, being a question of jurisdiction, can be raised at any time in the course of the proceedings, nevertheless, the record shows that petitioners presented their case before the Commission on alternative theories, either that the Commission should, on the basis of all of the evidence before it, separate petitioners' production and gathering properties or, in valuing them for rate making purposes, should recognize their status as unregulated properties. Furthermore, we think that petitioners' position in this respect was preserved by their specifications of error in the petition for re-hearing filed with the Commission (specification numbered II, R. XVI, 7142) and in their

[1]See argument and authorities cited in petitioners' brief, pages 43-45.

petition for review in the Court below (assignment of error numbered third, R. I, 7-8).

The issue drawn between petitioners and the respondents under this point resolves itself into a question of statutory construction. We point out in our brief (pages 47-48) that the legislative history indicates clearly that Congress intended by the Natural Gas Act to regulate the *service* of transporting gas to interstate markets for resale there and not the field price of gas as a *commodity*.

The legislative history in this regard is fully discussed in the brief of the Independent Natural Gas Association of America, *amicus curiae* in *Canadian River Gas Company* v. *Federal Power Commission, et al.*, No. 380, this term. We will not burden the Court here with a repetition of what is said there, but we respectfully refer the Court to that brief for a full discussion of the subject.

In the *Natural Gas Pipe Line Company* case, 315 U. S. 575, and the *Hope Natural Gas Company* case, 320 U. S. 591, cited by respondents, the issue was not raised and the discussion of the legislative history found in the *Hope* case was not directed to the question presented here.

Respondents' statement (Rsp. Brf. p. 35) that "the valuation of production and gathering facilities historically has been an integral part of the regulatory procedure in fixing rates for natural gas" is purely academic here. Such historical background and the cases cited centered around state regulation under statutes which did not contain, as does the Natural Gas Act, a specific provision excluding production and gathering from the regulatory scheme.

Sections 5(b), 6(a), 6(b), 8(a), 9(a), 10(a) and 14(b) of the Act, mentioned by respondents, do not support their contention that the Commission may exercise rate regulatory power over the business of production and gathering.

These sections confer upon the Commission investigatory powers and in no way qualify the express provision of Section 1(b) excluding production and gathering from the application of the provisions of the Act.

IV.

THE COMMISSION CANNOT CONSISTENTLY WITH DUE PROCESS OF LAW, RESTRICT THAT PART OF PETITIONERS' EARNINGS DERIVED FROM THEIR PRODUCING AND GATHERING PROPERTIES TO 6½% ON THE DEPRECIATED ORIGINAL COST OF SUCH PROPERTIES.

Respondents' point IV is stated as follows:

> In determining the reasonableness of petitioners' interstate wholesale rates the Commission is not required to value the gas which they produce on the basis of a 'field price.'

The point, as thus stated, is, obviously, too narrow and does not meet the due process issue presented by petitioners' point II in their brief, pages 46-54. Since, however, the discussion under respondents' point IV is directed entirely to that issue we restate it here in replying to respondents' point IV.

Respondents do not challenge the correctness of the computations in Appendix C of petitioners' brief showing a price of 2.8272¢ per MCF allowed petitioners for their gas at the wellhead and an average field price of 3.8336¢ paid by petitioners for all gas purchased in both fields. Respondents assert, however, (Rsp. Brf. p. 47-48, Note 29) that "the allowed cost of gas produced by petitioners averages 3.75¢ per MCF as compared with the 3.71¢ per MCF average cost of gas purchased."

These results are reached by a series of errors in respondent's Appendix B, which we will now proceed to point out:

Price for Purchased Gas.

3.71¢ per MCF is not the average cost of gas purchased in 1941. The correct figure is 3.99¢ per MCF. The error arises in the failure to recognize that royalty gas in the amount of 3,757,377 MCF was purchased in 1941 at approximately 4½¢ per MCF, the total paid being $171,044.

Therefore, to the total purchase price of gas purchased from other producers in the amount of $1,180,918 used in respondents' appendix B must be added $171,044; and to the total volume purchased, namely, 30,137,409 MCF, must be added the 3,757,377 MCF purchased from royalty owners.

The variation between this price of 3.99¢ per MCF and the price for purchased gas shown in petitioners' Appendix C, namely, 3.8336¢ per MCF, is due to the fact that petitioners' Appendix C was based on Exhibit 142, which was six months actual and six months estimated for 1941, whereas actual figures for 1941 show the price of 3.99¢.

It is proper to treat the royalty gas as purchased gas because the nature of a royalty is such that ⅛ of the gas belongs to the lessor at the wellhead. Petitioners purchase all of the royalty gas from their producing wells.

Commission's Allowance for Petitioners' Produced Gas.

The price of 3.75¢ computed in respondents' Appendix B as the allowance to petitioners for their produced gas is incorrect by reason of the following errors:

1. Included in the cost of producing petitioners' gas is the item of $171,044 paid to royalty owners. This item

is not properly a cost of petitioners' produced gas because it is the purchase price of the royalty gas, as explained above. Likewise, the volume of produced gas appearing in respondents', Appendix B namely, 30,059,021, should be reduced by the volume of the royalty gas, to-wit: 3,757,377 MCF, to reach the correct volume of produced gas, namely, 26,301,644 MCF.

2. Included in the cost of producing petitioners' gas (In expenses designated "Gas Well Operation" and "Gas Well Maintenance") are two items which should have been eliminated.

(a) Field Measuring Station Operation and Maintenance Expense amounting to $17,643 (R. XII, 5595);

(b) Supervision and Engineering Operation and Maintenance Expense amounting to $18,433 (Part of total Supervision and Engineering Operation and Maintenance Expense of $31,892 is applicable to items which should not be included as part of the cost of producing petitioners' gas).

Thus where $377,542 is shown in respondents' Appendix B, the amount should be $170,422.

3. The allocation (developed in respondents' Appendix B but nowhere to be found in the Commission's opinion or findings or in the record) of $120,300 of administrative and general expense to the operation of wells and leases is not computed correctly. This allocation appears to be based on an apportionment of an item of $841,848 whereby 14.29% thereof is charged to wells and leases and 85.71% thereof is charged to other operation and maintenance. These percentages are derived from the percentage relation of $377,542 to $2,265,152. These two items represent, respectively, production expense and other operation and maintenance expense totalling $3,823,612 less $1,180,918

for natural gas purchased. Included in the figure $377,542 is $171,044 paid for royalty gas and $36,076 ($17,643 + $18,433) also improperly included as explained above (1+2). These, of course, should have been taken out, reducing the figure $377,542 to $170,422. The $36,076 should be added to the figure $2,265,152. If this is done, the resulting percentages are 6.9 and 93.1. If we apply the percentage 6.9 to the item of $841,848, we find that the general and administrative expense allocable to wells and leases is approximately $58,088 instead of $120,300 (adopting this method of allocation developed for the first time in respondents' Appendix B). It may be observed in this connection that it is difficult to believe that the overhead costs of a natural gas pipe line company having a total rate base of approximately $67,000,000 of which only about 3%, or $2,555,472 (Appendix C of petitioners' brief), is invested in leases and wells should be allocated to the extent of 6.9% to such wells and leases.

4. The Depreciation figure of $94,628 determined through use of an average rate for 1941 is incorrect and should have been $164,548 (shown in petitioners' Appendix C). The depreciation rate applicable to petitioners' production properties is stated to be 6% (R. I, 279 and R. V., 2162).

5. The item of production taxes, $52,811, is incorrect as it includes, "Gross Production, Receipts, Etc." (R. XII 5591). The correct amount is $41,551 (R. XI 5031, Lines 13 and 30).

6. The item of $54,142 shown as the federal income tax allocated to wells and leases is incorrect because it is based on the ratio of an assumed return on production properties of $215,672 to the total return; whereas we have shown

in petitioners' Appendix C that the portion of the return actually allowed on the wells and leases was but $166,105. The ratio of the latter figure to the total return allowed is 3.81% and the amount of federal taxes thereby allocable to wells and leases is $41,672.

7. The amount of the return shown in respondents' Appendix B, to-wit: $215,672, is incorrect due to their use of the figure $417,405 instead of the correct figure (shown in petitioners' Appendix C) of $1,090,528 for the reserves for depreciation applicable to gas wells and equipment. As a result, the net investment in wells and leases allowed in the rate base was found by respondents to be $3,318,034, whereas the correct amount is $2,555,472, as shown in petitioners' Appendix C, item (e). Respondents accept this figure as correct in their computations in note 31 at page 49 of their brief.

When adjustments are made to correct all of the above errors in respondents' Appendix B the result shows an allowance for petitioners' produced gas of 3.25¢ per MCF.

Respondents assert that fair and stable field prices would not prevail if the Commission followed a practice of separating production and gathering properties from the rate base and allowing a field price for gas at the point where it enters the interstate transmission system. Nothing envisioned by respondents may be compared with the chaotic results which are bound to follow if the value of gas in the field is determined upon a 6½% rate of return on the original depreciated cost to each individual producer. The hazards and uncertainties of the production and gathering business are such that a wide variation in prices would inevitably result from application of the Commission's formula. This, we think, was well known to Congress and is a further indication of the wisdom of the law makers in

providing that the provisions of the Act shall not apply to production and gathering. It is interesting to note the statement of respondents (Rsp. Brf. p. 49 that

> "Finally, if the commodity price rather than cost were adopted by the Commission there would no longer be any peculiar necessity for treating the gas business as presenting any hazards. As a result, the transmission facilities, which constitute the larger portion of the pipe lines' investment, would be entitled to a lower rate of return than 6½%."

It is suggested in the note to the quoted paragraph that the return allowed on transmission facilities might be limited to 5½% or 6%. This appears to be a concession that, by reason of the difference between the production and gathering busin. s and the service of transportation, the former requires different treatment in the rate-making process than the latter. By the same token, gas leasehold properties require different treatment in arriving at their value for rate-making purposes.

The fallacy of the Commission's valuation formula is demonstrated by the respondents' computations in the same note. If six per cent were allowed on the transmission facilities (and there is certainly sufficient hazard in that business alone to warrant such a return), the $489,015 return on production property would afford only a rate of return of approximately 4.3% on petitioners' production properties if the market value of their gas leaseholds, shown by their excluded evidence to be $8,339,722, is used in the rate base. Such valuation is proper because the theory of respondents' computation is that petitioners are no longer bound by the depreciated original cost valuation of their producing properties.

The argument is made that Petitioners tendered evidence was subject to the same criticism directed to the evidence

dealing with leaseholds, which was *admitted and considered*, in *Dayton Power and Light Co.* v. *Commission*, 292 U. S. 290, 296-301, and respondents refer also to the criticism by this Court of the weight of the evidence of leasehold values which was *heard and considered* in *United Fuel Company* v. *Commission*, 278 U. S. 300.

The *United Gas Company* cases and the *Dayton Power & Light* case can be distinguished on the following grounds:

1. The evidence offered was admitted.

2. Generous valuations, in excess of original cost, had been made below. The Kentucky Commission had allowed over $6,000,000 and the West Virginia court had allowed over $10,000,000 for 137,000 acres. The Ohio Commission had allowed over $7,000,000 for approximately 291,000 acres. Here, the allowance was only $955,000 for approximately 265,000 acres in proven fields far superior in actual production, potential reserves, and possibility of successful drilling.

3. The evidence of value was all based on an assumed quantity of gas underlying the leaseholds, recovered over a period of years, transported to an unregulated market 130 miles away and there sold at 30c per MCF. Even so the court said only that the evidence did not have controlling effect. Mr. Justice Cardozo said in the *Dayton Power & Light Co.* case 292 U. S. 290, 301:

> It had no such commanding quality as to apply coercion to the judgment of the appointed triers of the facts and exclude every choice but one.

4. In the *United Gas* case the court pointed out that evidence of market value was lacking. Here, the evidence offered and excluded dealt solely with market value, as more fully shown in the record (R. IX, 4187-4201) and summarized in petitioner's brief, pages 50-51.

The evidence offered in the *Dayton* and *United Gas* cases dealt with leaseholds in the Appalachian area. That area has in the past produced large volumes of gas but the fields in that area are small in size and substantial risks of dry holes exist. Thus in the Commission's opinion in the *Hope* case, 44 P. U. R. (N. S.) 1 the Commission said, with respect to that area,

> "the permeability and porosity characteristics of the region caused isolated pools of natural gas and the company's gas productive properties are intermingled with nonproductive areas and other companies' properties."

Mr. Justice Jackson stated, discussing the same field (320 U. S. 631), that the development risks appear from the circumstances that up to 1928, even in the proven area, 15.7 per cent of the wells drilled had failed to produce in commercial quantities.

The converse of this situation is clearly shown by the record to obtain both as to the Panhandle field and the Hugoton field (the field in which Petitioners own their gas leases). While it is generally assumed that at some point these fields probably are tied together (R. IX, 4196), each field is generally regarded as being an enormous *common reservoir*. Thus, Witness Smith stated that the gas in the Panhandle field is contained in a common reservoir; that the field extends 125 miles in length with an average width of approximately 20 miles; and that, as classified by the Railroad Commission of Texas, 1,085,270 acres produce sweet gas and 372,437 acres produced sour gas (R. VIII, 4104).

With respect to the Hugoton field, Dr. Bartle testified (R. IX, 4161) that, while ultimate limits of the Hugoton field have not yet been definitely determined, he had indi-

cated on his map a large area in which *no dry holes had been drilled*. This area was about 65 miles in length and from 25 to 45 miles in width in the State of Kansas; about 35 miles in length and 30 to 40 miles in width in Oklahoma; and about 30 miles in length and 12 to 30 miles in width in the extreme northern part of Texas. The total field thus outlined contained approximately 2,540,000 acres (R. IX, 4161).

In the early history of both fields Panhandle Eastern acquired acreage in what has been found to be, as a result of subsequent drilling both by it and other producers, choice portions of both fields and has made consolidations of its leases in the areas which are located at the top of the structure (R. III, 1152), areas which will probably be the last portions of the fields to be abandoned (R. III, 1154). The quality of this acreage is reflected in the circumstance that while the average open flow potential (productive capacity) of all wells in the West Panhandle field is only 16,019 MCF, the average open flow potential of Panhandle Eastern's wells in that field is 25,025 MCF daily (R. IX, 4129). In the Hugoton field the reserves of Panhandle Eastern's wells constitute at least an average of the proven area of the field (R. XIII, 1297).

Respondents tacitly concede that petitioners are paying 4½¢ per MCF for gas purchased from their royalty owners, and 5¢ per MCF for gas purchased from the co-owners of the thirty-four wells jointly owned by petitioners and others. They make no answer whatever to the proposition that, where A and B are selling gas from the same well, it is fundamentally unjust and unreasonable to let A charge the consumer 5¢ per MCF and to allow B to charge only 3¼¢ per MCF.

CONCLUSION.

For the reasons assigned in petitioners' brief and in this reply brief, we respectfully submit that the judgment of the Circuit Court of Appeals should be reversed and that the order of the Federal Power Commission should be set aside.

Respectfully submitted,

PANHANDLE EASTERN PIPE LINE COMPANY, ILLINOIS NATURAL GAS COMPANY, AND MICHIGAN GAS TRANSMISSION CORPORATION, PETITIONERS

v.

FEDERAL POWER COMMISSION, CITY OF DETROIT, MICH., COUNTY OF WAYNE, MICH., MICHIGAN CONSOLIDATED GAS COMPANY, AND MICHIGAN PUBLIC SERVICE COMMISSION

ON PETITION FOR A WRIT OF CERTIORARI TO THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE EIGHTH CIRCUIT

BRIEF FOR THE RESPONDENTS IN OPPOSITION

OPINIONS BELOW

The opinion and order of the Federal Power Commission (R. I, 14–43)[1] are reported in 45 P. U. R. (N. S.) 203. The opinion of the Circuit Court of Appeals (R. XVI, 7198–7218) is not yet officially reported.

[1] In the record citations, roman numerals refer to the volume, Arabic numerals refer to the page.

JURISDICTION

The judgment of the Circuit Court of Appeals was entered on June 6, 1944 (R. XVI, 7219–7220). The petition for a writ of certiorari was filed on July 28, 1944. Jurisdiction of this Court is invoked under Section 19 (b) of the Natural Gas Act and Section 240 (a) of the Judicial Code, as amended by the Act of February 13, 1925.

QUESTIONS PRESENTED

1. Whether the Commission's interim rate order, allowing petitioners a return of 6½ per cent upon the actual investment in their properties and leaseholds in service, yielding a return of 12 percent upon petitioners' common stock and 9 per cent on their combined common stock and surplus, after payment of all necessary operating expenses, interest on the long-term debt and dividends on the preferred stock, is unjust and unreasonable.

2. Whether the Commission must, as a matter of law, receive and consider evidence of the "reproduction cost" of petitioners' physical properties and the "market value" of their leaseholds, where, petitioners, although afforded an opportunity, failed to establish the relevance of such evidence, and where the Commission, having before it accurate and reliable evidence of the actual legitimate cost of such properties and leaseholds, found the former evidence to be irrelevant.

3. Whether, in determining the amount of reduction to be made in petitioners' wholesale rates, the Commission was required to make a detailed cost allocation as between petitioners' wholesale business and direct industrial business, where the latter was found to be minor and incidental to the wholesale business, and where petitioners' president testified that a detailed allocation would be "unrealistic" and "impracticable."

STATUTES INVOLVED

The relevant provisions of the Natural Gas Act of 1938 (52 Stat. 821; 15 U. S. C. 717) are set forth in the Appendix, *infra*, pp. 18–21.

STATEMENT

The proceedings before the Commission arose out of a complaint filed February 28, 1941 by the City of Detroit and County of Wayne, Michigan, alleging that the rates and charges of petitioners, Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Corporation, for natural gas sold to Michigan Consolidated Gas Company for resale for ultimate public consumption in that City and County were unjust, unreasonable, and unduly discriminatory (R. XVI, 7002). The Commission, on its own motion, instituted an investigation on May 22, 1941 of all interstate wholesale rates and charges of such petitioners, and later expanded the investigation to include.

those of petitioner, Illinois Natural Gas Company (R. XVI, 7061, 7088). Respondent Michigan Public Service Commission and respondent Michigan Consolidated Gas Company, also urging the propriety of a reduction in the challenged rates and charges, were permitted to intervene in the proceedings, which were consolidated for hearing (R. XVI, 7024, 7046, 7064). After these proceedings were initiated, petitioner Panhandle Eastern Pipe Line Company acquired all the properties of the other two petitioners, which were then dissolved (Pet. 4, n. 1).

After extensive hearings were had (R. I, 45–R. XVI, 7001) and petitioners' case was closed (R. VIII, 3975, 4011), counsel for Detroit and Wayne County, counsel for the Commission, and counsel for Michigan Consolidated Gas Company, in April 1942, filed separate motions with the Commission requesting an interim order reducing petitioners' rates by $6,800,479, $5,580,888, and $5,489,874 per annum, respectively (R. XVI, 7100, 7104, 7125). Following submission of briefs the Commission, on September 23, 1942, entered its opinion and interim order here under review, finding that petitioners' interstate wholesale rates were excessive and requiring petitioners to reduce such rates on and after November 1, 1942, so that if the reduced rates had been in effect during 1941, there

would have resulted a reduction in revenue of $5,094,384 (R. I, 15–37, 38–43).[2]

The Commission founded its order upon the $78,814,292 actual legitimate cost of petitioners' property in service on December 31, 1941; less $12,596,987 for accrued depreciation; plus $920,000 for working capital; which resulted in a rate base of $67,137,305.[3] Petitioners presented evidence purporting to show the "reproduction cost new" of their physical properties and the "market value" of their gas leaseholds, totalling $89,672,102.[4] The trial examiner, after affording petitioners a full opportunity to establish its relevance, sustained a motion to strike this evidence; and the action of the trial examiner was approved

---

[2] The Commissioner's order (R. I, 42) required:

"(A) The rates and charges made, demanded, or received by the respondents for or in connection with their transportation and sale of natural gas in interstate commerce for resale for ultimate public consumption shall be so reduced as to reflect, when applied to respondents' 1941 transportation and sales, a reduction of not less than $5,094,384 per annum below their 1941 consolidated gross operating revenues of $17,789,573 * * *."

[3] There is no dispute as to the actual legitimate cost of petitioners' property (R. I, 21–22; Pet. 8). The amount of accrued depreciation was taken from petitioners' books as petitioners had requested in their brief before the Commission (R. I, 23). The allowance for working capital was not questioned in the petition for review in the court below (R. I, 6–12).

[4] R. I, 18–21; R. IX, 4209, 4277; R. X, 4810; R. XI, 4885; R. XII, 5455, 5531.

by the Commission in its opinion (R. I, 18–21, 488; R. II, 628, 712, 717).

The Commission allowed a 6½% return on the rate base, which return it found to be "fair and liberal." Using 1941 as the test year, the Commission allowed all operating expenses, including the annual depreciation expense, the exploration and development costs incurred by petitioners in that year as shown by their books, and Federal income taxes (R. I, 30–31).[5] With respect to increases in operating expenses which petitioners claimed would occur after 1941, including increased taxes and amortization of rate case expense, the Commission found, in the light of petitioners' earnings during the first three months of 1942, that these claimed increases in expenses would be more than offset by increased revenues (R. I, 30–33).

Petitioners' application for rehearing (R. XVI, 7141–7149) was denied by the Commission on October 30, 1942 (R. XVI, 7150). Thereafter they filed a petition for review in the circuit court of appeals. That court heard argument on May 14, 1943 (R. XVI, 7196), but deferred its decision pending this Court's disposition of *Federal Power Commission* v. *Hope Natural Gas Company*, 320 U. S. 591 (R. XVI, 7196). After this Court handed down its opinion in that case on January 3, 1944, the instant case, at the re-

[5] Two minor adjustments were made, which are not now in dispute (R. I, 30–31).

quest of the court below, was resubmitted upon supplemental briefs and argument (R. XVI, 7196, 7197), and the court then entered its opinion and judgment on June 6, 1944, affirming the Commission's order (R. XVI, 7198, 7219).

ARGUMENT

The court below properly held that the rates established by the Commission are just and reasonable, and that petitioners were not denied any rights guaranteed by the due process clause or by the Natural Gas Act. In view of this Court's decisions in *Federal Power Commission* v. *Hope Natural Gas Co.*, 320 U. S. 591, and *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U. S. 575, we submit that this case presents no question calling for review.

I. Petitioners contend (Pet. 24–28) that the Commission's rate order allows them an inadequate return. It is a sufficient answer that, as held below, the "end result" of the Commission's order, when "viewed in its entirety," is not "unjust and unreasonable" under the standards laid down by this Court in *Federal Power Commission* v. *Hope Natural Gas Co.*, 320 U. S. 591, and *Federal Power Commission* v. *Natural Gas Pipeline Company*, 315 U. S. 575.

The Commission's rate order, allowing a 6½% return on the rate base, will permit petitioners to earn $4,363,925 upon the basis of the test year, after meeting all operating expenses, including

annual depreciation expenses, exploration and development costs, and Federal income taxes (R. I, 30). The undisputed annual cost of servicing petitioners' long-term debt is $957,786 (or 2.88 per cent), and the cost of servicing their preferred stock is $939,000 (or 5.8 per cent), a total of $1,896,786 (R. XIV, 6097; Pet. 8), which leaves $2,467,139 for petitioners' $20,184,175 of common stock, a return on such stock of 12% (R. XII, 5501; XIV, 6097).[6] Petitioners urge (Pet. 26) that they are also entitled to a return on their surplus, but they have no cause for complaint on that score even if their position is sound. For the earnings of $2,467,139 available for the common stock and surplus will provide a return of 9 percent on the combined common stock and surplus of $27,294,000. The allowed rate of return, as the Commission found (R. I, 28–30), is commensurate with returns on investments in other enterprises having corresponding risks, and is more than sufficient to insure confidence in petitioners' financial integrity.[7] There is thus no room for any contention that the re-

[6] In the *Hope* case, this Court found unobjectionable a rate order the result of which was to permit earnings of 7.8 per cent on the common stock (320 U. S. 591 at 603–604).

[7] The record shows that comparable earnings on the combined common stock and surplus of 153 of the most stable industrial companies in the country during the test year 1941 averaged 8.65% (R. XVI, 6867; VIII, 3978–3980). These industrials were characterized by petitioners' witness as "closely approximating stability that one would expect in a

turn afforded petitioners is "unjust and unreasonable." Cf. *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U. S. 575, at p. 586.[8]

2. The court below properly rejected petitioners' contention that they were denied due process by the Commission's approval of the trial examiner's action in striking their evidence of the "reproduction cost" of the physical properties and the "market value" of the leaseholds. While the point was not raised in the court below, it is to be observed that petitioners did not apply to the court under Section 19 (b) of the Act for leave to adduce this evidence, a procedural defect which this Court held to be fatal under cognate circumstances in *Consolidated Edison Company* v. *N. L. R. B.*, 305 U. S. 197, 226. See also *Cali-*

regulated industry" (R. VIII, 3714, 3718–3719). The Commission found that Panhandle Eastern has earned an average of 10.64% on its net investment over the past five years, and Michigan Gas an average of 8.5% during approximately the same period (R. I, 29).

[8] Nor does petitioners' experience since issuance of the Commission's order support that contention. Earnings in excess of the reduction prescribed by the Commission have been and are currently being impounded under the stay order of the court below, and are not available to petitioners for dividend or other purposes. Yet during the past year petitioners, out of revenues represented by the reduced rates, paid dividends of 8 percent on their outstanding common stock (see Standard and Poor's Corporation 1943 Annual Dividend Record, p. 112), and in June 1943 sold to the public at a premium $10,000,000 of their 10-year debentures paying interest at only 2¾ percent (see Moody's Public Utilities for June 23, 1943, p. 1147).

fornia Lumbermen's Council v. *Federal Trade Commission*, 115 F. (2d) 178, 183 (C. C. A. 9), certiorari denied, 312 U. S. 709; *Hershey Chocolate Corporation* v. *Federal Trade Commission*, 121 F. (2d) 968, 971 (C. C. A. 3); but see *Fashion Originators' Guild* v. *Federal Trade Commission*, 114 F. (2d) 80, 82 (C. C. A. 2), affirmed on other grounds, 312 U. S. 457, 467–468.

In any event, the Commission is not required, as a matter of law, to receive and consider such evidence. Cf. *Federal Power Commission* v. *Hope Natural Gas Company*, 320 U. S. 591, and *Federal Power Commission* v. *Natural Gas Pipeline Company*, 315 U. S. 575. Similar evidence, while received by the Commission in the *Hope Natural Gas Co.* case, was rejected for rate base purposes because it was considered "hypothetical and without probative value" (44 P. U. R. (N. S.) 1, 8–9). This Court, noting the Commission's action in that regard (320 U. S. at 596–597), specifically held that neither the Constitution nor the Natural Gas Act requires the use of "reproduction cost" or "fair value" evidence in arriving at the rate base, and reversed the contrary ruling of the circuit court of appeals. As this Court has stated, the "Constitution does not bind rate-making bodies to the service of any single formula or combination of formulas." *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U. S. 575, 586.

Nor is there any basis for petitioners' contention that the effect of the Commission's action was "to prejudge a case before its hearing" (Pet. 15). The trial examiner, before he excluded this evidence, afforded petitioners several opportunities to establish its relevance (R. I, 488; R. II, 628, 712, 717). This petitioners failed to do, merely reiterating the contention, which they now advance, that the Commission was compelled, as a matter of law, to receive and consider such evidence (R. II, 714–716; Tr. 1254, 1283). In reviewing and approving the action of the trial examiner, the Commission found on the basis of the record that the excluded evidence was irrelevant in this proceeding (R. I, 18–21). This action was proper, as the lower court held (R. XVI, 7202–7208). The properties have been built within recent years, construction having begun in 1930. The cost records were complete and properly maintained and there was no need to resort to estimates. There is clearly a rational basis for the informed judgment of the Commission that these circumstances made it unnecessary to consider opinion evidence as to the reproduction cost of the property and the market value of the leaseholds (R. I, 18–21).

3. Petitioners contend that the Commission, in finding the rate base, should have made an allocation between property, capital and revenue which relate to sales at wholesale and that which relates to direct industrial sales (Pet. 18, 23–24). This

contention was properly rejected below (R. XVI, 7210–7213).

The undisputed evidence established that petitioners' property and capital are devoted to a unified business consisting primarily and almost exclusively of the production and the interstate transmission and sale of natural gas at wholesale; that the direct sales, which are made to only 19 industrial consumers, constitute a minor portion of the business; that petitioners have not constructed or provided any main line capacity for such direct industrial consumers (R. VIII, 3652); and that direct sales to them are made on an interruptible basis, only at times when the capacity in petitioners' lines is not required for service to the wholesale customers (R. VIII, 3862–3864, 3616–3617).[*] Moreover, petitioners' president testified that any attempt to make a detailed allocation between the direct industrial sales and the sales at wholesale would be "theoretical," "unrealistic" and "not practical" because of the unified nature of the business (R. VIII, 3960–3962). The Commission's finding that it was unnecessary in this case to make a detailed allocation was accordingly supported by substantial evidence and cannot be said to lack a rational basis.

[*] While direct sales in 1941 involved 13% by volume of all gas sold by petitioners, only 8 per cent of petitioners' gross revenues in 1941 was derived from direct industrial consumers and deliveries to them on the peak days of the 1941–1942 winter amounted to only 2.69 per cent of total deliveries (R. XVI, 6871–6883).

But in any event, the Commission's determination to make no allocation for the relatively minor portion of direct sales caused petitioners no damage. Petitioners have made no showing to the contrary, nor would the record support it. Petitioners' witness testified that in determining the net return from the wholesale business for rate making purposes, the cost of carrying on the wholesale business should be reduced by an amount equal to one-half of the apparent profits on the direct industrial sales during the test year, leaving a net return of some $319,000 allocable to direct industrial sales.[10] The Commission's order is in fact even more favorable to petitioners, for under it the return allocable to the direct indus-

[10] According to petitioners' witness Biddison's theoretical cost allocation, the total revenues from direct industrial sales were $1,500,527; the total expenses applicable to such sales (before Federal income taxes) were $499,699, leaving $1,000,828 available for Federal income taxes and return (R. XIII, 5947). He testified on cross-examination that, "in fairness" to the wholesale customers, one-half of the latter amount, or $500,414, should be contributed toward the reduction in the cost of carrying on the wholesale (regulated) business, i. e., that this sum was the amount allocable as the additional cost of carrying on the direct industrial (unregulated) business (R. VIII, 3857, 3872-3874). Petitioners admit that of the remaining one-half ($500,414) available for income taxes and return for the direct industrial business, $180,758 is for Federal income taxes, and the balance of $319,656 represents the return to which they claim to be entitled as profit for the direct industrial business. As stated in petitioners' main brief in the court below (p. 193): "If this suggestion [by petitioners' witness Biddison] were followed, there would be a net earning by unregulated sales of $500,414 before Federal taxes, and $319,656 after applying 1941 tax rates."

trial sales is some $26,000 more than that contended for by petitioners.[11]

There is no basis for petitioners' contention (Pet. 18–20) that the decision below conflicts with that of the Tenth Circuit Court of Appeals in *Colorado Interstate Gas Company* v. *Federal Power Commission*, 142 F. (2d) 943. As petitioners' witness recognized at the hearings in this case (R. VIII, 3869), the facts here are essentially different from those in the *Colorado* case, where "a major portion of the facilities was constructed for the express purpose of serving direct industrial customers whose sales constituted more than one-half of the volume of the system output (R. VIII, 3868–3869)."[12] Moreover, in the *Colorado* case, the Commission did make a detailed alloca-

[11] As the court below stated (R. XVI, 7212): "Under the Commission's order, the petitioners are allowed a 6½% return ($4,363,925) on their entire business. Under the method of allocation proposed by an expert witness of the Commission, $4,017,878 of the return would be attributable to sales at wholesale (subject to regulation), and $346,047 to direct industrial sales (not subject to regulation)." (See R. IX, 4002; R. XVI, 6883.) This amount is $26,391 more than the $319,656 testified to by petitioners' witness.

[12] As stated in the Commission's opinion in that case (43 P. U. R. (N. S.) at 210), one of the "primary objectives" of the business was to supply gas to the Colorado Fuel & Iron Corporation, a large industrial customer and one of the two markets which were "the essential prerequisite" of the construction of the main line. Here direct industrial sales were an incidental, subordinate and entirely minor part of petitioners' business, to which it would be concededly "unrealistic" and "not practical" to make any allocation of facilities.

tion between the wholesale and direct sales, and it was the method of allocation which was challenged on review. Since there was no issue before the Tenth Circuit Court of Appeals as to the necessity of a detailed allocation in every case, the portion of the court's opinion on which petitioners here rely was dictum.

There is no merit in the implication in the petition (Pet. 7) that the absence of a detailed allocation results in a regulation of the rates charged by petitioners for direct sales to industrial customers. The Commission's order, by its terms, is limited to a reduction of petitioners' interstate wholesale rates on and after November 1, 1942. The order does not prescribe rates for gas sold directly to industrial consumers, and does not prevent petitioners from increasing or decreasing such rates at will. In addition, the rate order in question is an interim order, subject to pragmatic adjustments as need or justification is shown.

4. Certain incidental contentions of petitioners may be dealt with briefly. It is urged that in taking actual legitimate cost rather than "reproduction cost new" or "market value" of the facilities devoted to production and gathering of gas, the Commission exercised "jurisdiction over production and gathering of natural gas in violation of the Natural Gas Act" (Pet. 2). The argument as developed in the petition (Pet.

21–23) is substantially the same as that advanced in *Federal Power Commission* v. *Hope Natural Gas Company*, 320 U. S. 591, 614, n. 25. In there rejecting such contentions, this Court pointed out that the ascertainment of the cost of producing and gathering natural gas, "like the provisions for operating expenses, is essential to the rate-making function as customarily performed in this country." Further discussion of that question here seems unnecessary.

It is also contended (Pet. 27–28) that the Commission should have included in the rate base the cost of construction work in progress and future capital expenditures. This Court ruled in *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U. S. 575, 587, that "the refusal to include in the rate base capital expenditures not yet made can not involve confiscation." Moreover, petitioners follow the policy of capitalizing interest during construction (R. I, 275–276), and it would be a duplication to allow a return on such expenditures during the construction period. In any event, consideration of future expenditures to serve new business would also have required consideration of the additional revenues which will result therefrom, and as to this petitioners failed to adduce any evidence (R. I, 28).

CONCLUSION

The decision below fully accords with those of this Court in the *Hope* and *Natural Gas Pipeline* cases, and there is no substance to the alleged conflict of decisions. We respectfully submit that

the petition for a writ of certiorari should be denied.

APPENDIX

The pertinent provisions of the Natural Gas Act of 1938, 52 Stat. 821, et seq. (15 U. S. C. 717) are as follows:

SEC. 1. (a) As disclosed in reports of the Federal Trade Commission made pursuant to Senate Resolution 83 (Seventieth Congress, first session) and other reports made pursuant to the authority of Congress, it is herby declared that the business of transporting and selling natural gas for ultimate distribution to the public is affected with a public interest, and that Federal regulation in matters relating to the transportation of natural gas and the sale thereof in interstate and foreign commerce is necessary in the public interest.

(b) The provisions of this Act shall apply to the transportation of natural gas in interstate commerce, to the sale in interstate commerce of natural gas for resale for ultimate public consumption for domestic, commercial, industrial, or any other use, and to natural-gas companies engaged in such transportation or sale, but shall not apply to any other transportation or sale of natural gas or to the local distribution of natural gas or to the facilities used for such distribution or to the production or gathering of natural gas.

* * * * * *

SEC. 5. (a) Whenever the Commission, after a hearing had upon its own motion or upon complaint of any State, munici-

pality, State commission, or gas distributing company, shall find that any rate, charge, or classification demanded, observed, charged, or collected by any natural-gas company in connection with any transportation or sale of natural gas, subject to the jurisdiction of the Commission, or that any rule, regulation, practice, or contract affecting such rate, charge, or classification is unjust, unreasonable, unduly discriminatory, or preferential, the Commission shall determine the just and reasonable rate, charge, classification, rule, regulation, practice, or contract to be thereafter observed and in force, and shall fix the same by order: *Provided, however,* That the Commission shall have no power to order any increase in any rate contained in the currently effective schedule of such natural gas company on file with the Commission, unless such increase is in accordance with a new schedule filed by such natural gas company; but the Commission may order a decrease where existing rates are unjust, unduly discriminatory, preferential, otherwise unlawful, or are not the lowest reasonable rates.

* * * * *

SEC. 6. (a) The Commission may investigate and ascertain the actual legitimate cost of the property of every natural-gas company, the depreciation therein, and, when found necessary for rate-making purposes, other facts which bear on the determination of such cost or depreciation and the fair value of such property.

* * * * *

SEC. 19 (b) Any party to a proceeding under this Act aggrieved by an order issued

by the Commission in such proceeding may obtain a review of such order in the circuit court of appeals of the United States for any circuit wherein the natural-gas company to which the order relates is located or has its principal place of business, or in the United States Court of Appeals for the District of Columbia, by filing in such court, within sixty days after the order of the Commission upon the application for rehearing, a written petition praying that the order of the Commission be modified or set aside in whole or in part. A copy of such petition shall forthwith be served upon any member of the Commission and thereupon the Commission shall certify and file with the court a transcript of the record upon which the order complained of was entered. Upon the filing of such transcript such court shall have exclusive jurisdiction to affirm, modify, or set aside such order in whole or in part. No objection to the order of the Commission shall be considered by the court unless such objection shall have been urged before the Commission in the application for rehearing unless there is reasonable ground for failure so to do. The finding of the Commission as to the facts, if supported by substantial evidence, shall be conclusive. If any party shall apply to the court for leave to adduce additional evidence, and shall show to the satisfaction of the court that such additional evidence is material and that there were reasonable grounds for failure to adduce such evidence in the proceedings before the Commission, the court may order such additional evidence to be taken before the Commission and to be adduced upon the hearing in such manner and upon such terms and condi-

tions as to the court may seem proper. The Commission may modify its findings as to the facts by reason of the additional evidence so taken, and it shall file with the court such modified or new findings, which if supported by substantial evidence, shall be conclusive, and its recommendation, if any, for the modification or setting aside of the original order. The judgment and decree of the court, affirming, modifying, or setting aside, in whole or in part, any such order of the Commission, shall be final, subject to review by the Supreme Court of the United States upon certiorari or certification as provided in sections 239 and 240 of the Judicial Code, as amended (U. S. C., title 28, secs. 346 and 347).

v.

FEDERAL POWER COMMISSION, CITY OF DETROIT, MICH., COUNTY OF WAYNE, MICH., MICHIGAN CONSOLIDATED GAS COMPANY, AND MICHIGAN PUBLIC SERVICE COMMISSION

ON PETITION FOR A WRIT OF CERTIORARI TO THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE EIGHTH CIRCUIT.

SUPPLEMENTAL BRIEF FOR THE RESPONDENTS

SUBJECT OF THIS BRIEF

This brief is filed by the respondents pursuant to the request of this Court, contained in a letter of October 7, 1944, from the Clerk, and is directed solely to the question raised in the Brief Amicus Curiae filed by the City of Cleveland, Ohio, on September 29, 1944: Whether the court below had jurisdiction over the subject matter of

this case under Section 19 (b) of the Natural Gas Act (52 Stat. 821, 15 U. S. C. §717r (b)), which provides:

> (b) Any party to a proceeding under this Act aggrieved by an order issued by the Commission in such proceeding may obtain a review of such order in the circuit court of appeals of the United States for any circuit wherein the natural-gas company to which the order relates is located or has its principal place of business, or in the United States Court of Appeals for the District of Columbia, by filing in such court, within sixty days after the order of the Commission upon the application for rehearing, a written petition praying that the order of the Commission be modified or set aside in whole or in part. A copy of such petition shall forthwith be served upon any member of the Commission and thereupon the Commission shall certify and file with the court a transcript of the record upon which the order complained of was entered. Upon the filing of such transcript such court shall have exclusive jurisdiction to affirm, modify, or set aside such order in whole or in part. * * *

The respondents submit that the court below had jurisdiction to hear and decide this case, because:

I. The designation of the circuit wherein the company "is located or has its principal place of business" is a matter of venue and not jurisdic-

tion, and any possible objection to the venue of the court below has been waived.

II. In any event, the "natural-gas company to which the order relates" had "its principal place of business" in the Eighth Circuit.

STATEMENT

The Federal Power Commission's order here under review was entered under the Natural Gas Act on September 23, 1942, and required petitioner Panhandle Eastern Pipe Line Company, and its wholly-owned subsidiaries, petitioner Illinois Natural Gas Company and petitioner Michigan Gas Transmission Corporation, to reduce their interstate wholesale rates on and after November 1, 1942, by $5,094,384 per annum based on their consolidated revenues during the test year 1941 (R. I, 38–43). The petitioners filed a joint application for rehearing (R. XVI, 7141–7149) which the Commission denied by order of October 30, 1942 (R. XVI, 7150).

On November 18, 1942, the petitioners filed a joint petition for review under Section 19 (b) of the Act in the court below, the United States Circuit Court of Appeals for the Eighth Circuit (R. I, 1–14). The petition, which was sworn to by the president of each petitioner, stated that "each of Petitioners has it principal place of business in Kansas City, Jackson County, Missouri, within the jurisdiction of the Eighth Circuit Court of Appeals;" that petitioners together constitute "a

pipe line production transmission and marketing system owning large gas reserves in Texas, Oklahoma, and Kansas, and a pipe line with lateral lines connecting such reserves with markets in Texas, Kansas, Missouri, Illinois, Indiana, Ohio, and Michigan; and that "a substantial portion of the transmission facilities lie within the territory over which this Court has jurisdiction." (R. I, 6).

Upon petitioners' joint application, the court below on December 7, 1942, issued a stay of the Commission's order pending review, upon the condition *inter alia* that "the monthly difference between payments to petitioners under existing rates or arrangements and those required under the order of the Commission" be impounded with the custodian of the court "for the benefit of the ultimate consumers or of petitioners as in this litigation may be determined entitled thereto" (R. XVI, 7182).[1]

While the review proceeding was pending in the court below, on or about April 1, 1943, petitioner Panhandle Eastern acquired all the properties and assumed the liabilities of its wholly-owned subsidiaries, petitioners Illinois Natural Gas and Michigan Gas, which were then dissolved (Pet. 4, n. 1).[2]

---

[1] The impounded funds now total some $15,000,000.

[2] The acquisition was approved by the Securities and Exchange Commission on April 1, 1943. *Re Panhandle Eastern Pipe Line Company, Illinois Natural Gas Company, Michigan Gas Transmission Corporation*, S. E. C. Holding Company Act Release No. 4212.

The court below heard argument on May 14, 1943, but deferred its decision pending this Court's disposition of *Federal Power Commission* v. *Hope Natural Gas Company*, 320 U. S. 591 (R. XVI, 7196). After this Court handed down its opinion in that case on January 3, 1944, the instant case, at the request of the court below, was resubmitted upon supplemental briefs and argument (R. XVI, 7196, 7197), and the court then entered its opinion and judgment on June 6, 1944, affirming the Commission's order (R. XVI, 7198, 7219). It is this order which the petition for certiorari herein seeks to review.

On June 19, 1944, after the court below had entered its decree affirming the Commission's order, the City of Cleveland, Ohio, which had not participated in the proceedings before the Commission or the court below, filed a motion in the court below, requesting "leave to intervene and be named a party respondent in this proceeding."[3] The stated purposes of the motion were (p. 6):

> (1) To oppose the granting of certiorari by the Supreme Court of the United States

[3] While this proceeding was pending in the lower court, a shortage of natural gas developed in the Appalachian area which includes the City of Cleveland. To alleviate this shortage, it was deemed advisable to make gas from the Panhandle Eastern system available to The East Ohio Gas Company which serves the City of Cleveland. Appropriate authorization of the necessary interconnecting facilities was issued by the Commission, with the concurrence of the War Production Board, on November 30, 1943. *Re East Ohio Gas Company*, 52 P. U. R. (N. S.) 91. Panhandle Eastern commenced the delivery of gas to East Ohio in October 1943.

to review the decree of this Honorable Court affirming the order of the Federal Power Commission reducing the rates of Panhandle Eastern Pipe Line Company if Panhandle applies for certiorari; (2) to participate in the defense of said decree and order in the Supreme Court of the United States if certiorari is granted; and (3) to protect the interest of the City of Cleveland and the ultimate consumers of gas within the City of Cleveland in the impounded fund.

The City raised no question in its motion as to the venue or jurisdiction of the court.[4] However, on August 28, 1944, just prior to argument on the motion, the City tendered for filing an "Intervening Petition" in which it requested that "the stay order be dissolved for lack of jurisdiction," or else "modified and conditioned to permit Panhandle to charge for the future no more than the interim rate fixed by the Federal Power Commission." The attack upon the jurisdiction was based upon the contention that "none of the natural-gas companies to which the * * * Commission's order relates was located within the Eighth Circuit" or had "its principal place of business within the Eighth Circuit" (p. 2).

The court below heard argument on the City's motion on September 2, 1944. The motion was

[4] The petition for certiorari herein was filed on July 28, 1944. Respondents' joint brief in opposition thereto was filed on September 3, 1944.

opposed by counsel for the Commission, the City of Detroit, and the County of Wayne, all respondents herein. Counsel for the petitioners also opposed the City's motion and, pursuant to leave granted at the argument, subsequently filed a memorandum of points and authorities, pointing out *inter alia* that the petitioners' principal place of business was in the Eighth Circuit; that the City's objection "that these proceedings were not brought in the proper circuit raises a question of venue and not a question of jurisdiction;" and that "venue in these proceedings has been waived." The court below took the motion under advisement.[1]

ARGUMENT

The amicus brief questions the jurisdiction of the court below over the subject matter on the ground that when the petition for review was filed, the petitioners were not "located" and did not have their "principal place of business" in the Eighth Circuit, within the meaning of Section 19 (b) of the Natural Gas Act. We submit that these contentions raise merely a question of venue, which has been waived; but even assuming that the objection is jurisdictional, it is clear from the record that the Eighth Circuit was the proper one for this proceeding.

[1] Suspension of the decision on the motion is of no practical effect, since the object of the motion was "to oppose the granting of certiorari" by this Court.

I

THE REFERENCE TO A PARTICULAR CIRCUIT IN SECTION 19 (b) OF THE ACT IS A MATTER NOT OF JURISDICTION BUT MERELY OF VENUE, WHICH CAN BE AND HAS BEEN WAIVED

Section 19 (b) of the Natural Gas Act provides that:

> Any party * * * aggrieved by an order issued by the Commission * * * may obtain a review of such order in the circuit court of appeals of the United States for *any* circuit wherein the natural-gas company to which the order relates *is located or has its principal place of business*, or in the United States Court of Appeals for the District of Columbia. [Italics supplied.]

The use of the comprehensive term "any circuit," plus the unqualified availability of the Court of Appeals for the District of Columbia, show a Congressional intention to vest *all* intermediate federal appellate courts with the power to review orders of the Commission, leaving the selection of the particular tribunal to the petitioner for review, subject only to objection by the respondent if the circuit selected possesses none of the qualifications specified in Section 19 (b). Since there is thus a general grant of power to all the courts of appeals, the question of which one should exercise that power in a particular case is a question of venue (*Camp* v. *Gress*, 250 U. S.

308, 311), and, unlike jurisdictional objections, the objection to the selection of a particular circuit can be waived. In *Neirbo Company* v. *Bethlehem Corporation*, 308 U. S. 165, 167–168, this Court said:

> The jurisdiction of the federal courts—their power to adjudicate—is a grant of authority to them by Congress and thus beyond the scope of litigants to confer. But the locality of a law suit—the place where judicial authority may be exercised—though defined by legislation relates to the convenience of litigants and as such is subject to their disposition. * * *

We submit that the decision of this Court in *Peoria Railroad Company* v. *United States*, 263 U. S. 528, should be dispositive of the City's contentions. In that case the Interstate Commerce Commission on petition of Minneapolis & St. Louis Railroad, a resident of Iowa, had issued an emergency order under the Transportation Act, 1920, requiring the Peoria & Pekin Union Railway Company to continue to interchange freight traffic with the Minneapolis Railroad. The Urgent Deficiencies Act provided that any suit to enjoin or annul such an order of the Interstate Commerce Commission should be brought in the district of the residence of the party on whose petition the order had been made. Although the Minneapolis Railroad, upon whose petition the order had been issued, was a resident of Iowa, the

Peoria Railroad brought suit against the United States to enjoin enforcement of the order in the federal district court for the Southern District of Illinois. The Minneapolis Railroad and the Commission intervened as defendants, without objecting to the venue of the court. The United States objected to such venue and the district court overruled the objection. The case was then heard upon application for a temporary injunction, which the court denied. The Peoria Company took a direct appeal to this Court; the United States did not cross-appeal. In urging affirmance in this Court of the decree dismissing the bill, the United States contended that the venue of the suit was in the district court of Iowa, since that was the residence of the Minneapolis Railroad on whose petition the I. C. C. order had been entered. In disposing of this contention, and reversing and remanding on the merits, Mr. Justice Brandeis, speaking for a unanimous court, stated (p. 535):

> * * * The provision that suit shall be brought in the district of the residence of the party on whose petition the order was made is obviously one inserted for his benefit. If there were a lack of jurisdiction in the district court over the subject matter, we should be obliged to take notice of the defect, even if not urged below by the appellee. *Mattingly* v. *Northwestern Virginia R. R. Co.*, 158 U. S. 53, 57. But the challenge is merely of the jurisdiction of the court for the particular district. The ob-

jection is to the venue. See *Camp* v. *Gress*, 250 U. S. 308, 311. This privilege not to be sued elsewhere can be waived; and it was waived both by the Minneapolis & St. Louis Railroad and the Commission. The United States was, nevertheless, entitled to insist upon compliance with the venue provision; and its objection was properly taken below. But by failure to enter a cross appeal from the court's action in overruling its objection, the right to insist upon it here was lost. The appellees can be heard before this Court only in support of the decree which was rendered. *The Maria Martin*, 12 Wall. 31, 40; *Bolles* v. *Outing Co.*, 175 U. S. 262, 268. We have, therefore, no occasion to consider whether the suit was brought in the proper district.

The venue prescribed in Section 19 (b) of the Natural Gas Act is clearly related to the convenience of the two parties who are principally interested in the review proceeding, namely, the Commission and the natural-gas company to which the order relates. Review in the Court of Appeals for the District of Columbia is convenient for the Commission, which is required by statute to maintain its "principal office" and hold its "general sessions" in the District of Columbia (Sec. 1 of the Federal Power Act). The provision for review in any circuit wherein the natural-gas company to which the order relates "is located or has its principal place of business," like the venue provision in the Urgent Deficiencies

Act, "is obviously one inserted for [the] benefit" of the company. Cf. *Peoria Railroad Company* v. *United States*, 263 U. S. 528, 535.

None of the respondents questioned the venue of the court below, and they do not now seek to do so. The City of Cleveland, as an applicant for intervention, was required to take the case as it found it and could not attack the judgment which had already been rendered when it filed its motion to intervene. *United States* v. *California Canneries*, 279 U. S. 553, 556; *Vinson* v. *Washington Gas Company*, 321 U. S. 489, 499. But even if the City had been permitted to intervene, it would have waived any objection to venue, since it did not question the venue or jurisdiction of the court below when it filed its motion. The City's position can surely be no better in this regard where it has not been permitted to become

---

The Urgent Deficiencies Act granted jurisdiction in one sentence to "the several district courts of the United States" over suits to enjoin or annul an I. C. C. order, and in another sentence provided that "the venue" of such suits relating to transportation should be in the district wherein resides the party on whose petition the order was made (Act of October 22, 1913, c. 32, 38 Stat. 219; 28 U. S. C. § 41 (28), § 43).

Section 19 (b) of the Federal Power Act contains the grant of jurisdiction and the specification of venue in the same sentence, without using the term "venue." But we do not think this circumstance is material, for in both statutes the designation of a particular court centers "on the convenience of the private parties involved." Final Report, Attorney General's Committee on Administrative Procedure (1941), pp. 93–94.

a party to the proceeding. In any event, the legislative history of Section 19 (b) shows conclusively that the convenience of the company and the Commission is alone relevant.

A serious difficulty would be presented if the specification of a particular circuit in Sec. 19 (b) were held to be jurisdictional. Since, as the *amicus* points out (Br. 12–13), suit against the Federal Power Commission is based upon a waiver of sovereign immunity, a judgment rendered without jurisdiction would not be *res judicata* on the jurisdictional question. Compare *United States* v. *United States Fidelity Co.*, 309 U. S. 506, 514. Consequently, unless the view urged herein is adopted, a judgment rendered under Sec. 19 (b) might be subject to collateral attack in another circuit if that court should find that the company's principal place of business was located elsewhere than had theretofore been assumed.

Section 19 (b) is derived from Section 313 (b) of the Federal Power Act of 1935. As originally drafted, Section 313 (b) of the Power Act would have permitted "*any person aggrieved*" by an order of the Commission to file a petition for review of such order in the Circuit Court of Appeals "for any circuit wherein *such person* resides or has his principal place of business" or in the Court of Appeals for the District of Columbia (S. 1725, 74th Cong., 1st Sess.). In the bill which was enacted (S. 2796, 74th Cong., 1st Sess.), this was changed to permit review in any circuit in which *the company* to which the order relates is located or has its principal place of business."

II

PETITIONERS' PRINCIPAL PLACE OF BUSINESS WAS IN THE EIGHTH CIRCUIT AT THE TIME THE PETITION FOR REVIEW WAS FILED.

Even if the reference to "principal place of business" in Section 19 (b) of the Act relates to jurisdiction, it is clear from the record that the court below properly acquired jurisdiction over the proceeding since at the time of the filing of the petition to review the principal place of business of Panhandle Eastern and its wholly-owned subsidiaries Illinois Natural and Michigan Gas was in the Eighth Circuit.

The petition for review alleged, under the oath of the president of each of the petitioners, that the principal place of business of each petitioner was in Kansas City, Missouri, which lies within the Eighth Circuit (R. 4, 6). This allegation, unchallenged by any of the parties to this cause, is fully supported by the facts of record.

Panhandle Eastern produces, purchases and gathers natural gas in Texas and Kansas, which it transports to markets along its main transmission line extending a distance of about 860 miles from Moore County, Texas, through the States of Oklahoma, Kansas, Missouri and Illinois to the Illinois-Indiana boundary. At that point, the gas is delivered into a main transmission line extending to Zionsville, Indiana, where the line branches to

Detroit, Michigan, and to Muncie, Indiana. This line was owned by Panhandle Eastern's subsidiary, Michigan Gas, until on or about April 1, 1943, while the proceedings below were pending, when Panhandle Eastern acquired the line and dissolved Michigan Gas. A number of lateral lines extending from Panhandle Eastern's main line in Illinois were owned by Panhandle Eastern's subsidiary, Illinois Natural. These lines were also acquired by Panhandle Eastern and Illinois Natural was dissolved on or about April 1, 1943 (R. I, 18; Pet. 4, n. 1).

Moreover, even prior to such acquisition, Panhandle and its subsidiaries, Michigan Gas and Illinois Natural, were "operated as a single system for the production, gathering, transportation and sale in interstate commerce of natural gas" (R. I, 18). Throughout the proceedings before the Commission, the three companies were treated as a single unit. The Commission issued one order requiring a reduction of rates based on the consolidated revenues and expenses of the three companies (R. I, 38–43). As stated in the Commission's opinion, it was "not controverted that the separate corporate entities may be disregarded" (R. I, 18).

The record shows that each of petitioners maintained its "principal business office" and kept its general corporate books and records at 1221 Balti-

more Avenue, Kansas City, Missouri.* This office was the headquarters of petitioners' vice president in charge of operations, chief engineer, production engineer, rate engineer, geologist, chief accountant and assistant treasurer, and assistant secretary (R. III, 1052; R. IX, 4103, 4215; R. X, 101, 152). The secretary-controller of the three petitioners spent a "vast amount of time" in that office (R. VI, 2616). The Kansas City office was the nerve center of the petitioners' natural gas operations from which the companies' telephone and telegraph lines radiated throughout the system, and from that office the chief gas dispatcher controlled pressures and issued instructions to the various compressor stations and to the field headquarters (R. IV, 1983–1986). The principal banking activities were also located in Kansas City at the Commerce Trust Company, where cash balances of $700,000 to $900,000 were maintained and against which 25,000 to 30,000 checks per year were drawn (R. III, 1364, 1384).

Moreover, a substantial portion of Panhandle Eastern's properties is located in Missouri, in the Eighth Circuit. More than 762 miles of pipelines are located in that State serving gas to 37 communities (R. IX, 4092–4093, 4101). These

*This is stated under oath in the 1941 and 1942 Annual Reports filed by the petitioners with the Commission, the former of which was incorporated into the record of the proceedings before the Commission by reference to its files (R. VIII, 4005–5096).

markets were characterized by petitioners' president as "very important" (R. VIII, 3943).

These facts of record establish clearly that each of the petitioners had its "principal place of business" in the Eighth Circuit within the meaning of the Natural Gas Act. It is significant that the brief amicus, while denying that the principal place of business of petitioners is in the Eighth Circuit, does not undertake to specify where that principal place of business is.

There is no merit in the contention of the amicus (Br. 17) that when the Commission's order relates to more than one natural gas company and such companies have their principal places of business in different circuits, "Congress has consented to suit against the United States only in the United States Court of Appeals for the District of Columbia." As above stated, the provision for venue in the Court of Appeals of the District of Columbia is primarily intended for the convenience of the Commission, and the Commission has not urged that such venue should be availed of here. Moreover, the statute contemplates that the Commission, in the light of its intimate knowledge of the operations of natural gas companies, will have the principal concern as to the venue of proceedings involving review of its orders. And to avoid unnecessary disputes with respect to such venue, Section 19 (b) of the Act provides that when the Commission has filed in a circuit court of appeals the "transcript of

the record upon which the order complained of was entered" such court "shall have exclusive jurisdiction to affirm, modify, or set aside such order in whole or in part." See *Columbia Oil and Gasoline Corporation* v. *S. E. C.*, 134 F. (2d) 265 (C. C. A. 3); *L. J. Marquis and Co.* v. *S. E. C.*, 134 F. (2d) 822 (C. C. A. 3); *Standard Oil Co.* v. *National Labor Relations Board*, 114 F. (2d) 743 (C. C. A. 8).

CONCLUSION

For the foregoing reasons, it is respectfully submitted that the court below had jurisdiction of the proceedings before it, and that the petition for certiorari should be denied for the reasons noted in our brief in opposition.

OCTOBER TERM, 1944

No. 296

PANHANDLE EASTERN PIPE LINE COMPANY, ILLINOIS NATURAL GAS COMPANY, AND MICHIGAN GAS TRANSMISSION CORPORATION, PETITIONERS

v.

FEDERAL POWER COMMISSION, CITY OF DETROIT, MICH., COUNTY OF WAYNE, MICH., MICHIGAN CONSOLIDATED GAS COMPANY, AND MICHIGAN PUBLIC SERVICE COMMISSION

ON WRIT OF CERTIORARI TO THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE EIGHTH CIRCUIT

BRIEF FOR THE RESPONDENTS

OPINIONS BELOW

The opinion and order of the Federal Power Commission (R. I, 14–43)[1] are reported in 45 P. U. R. (N.S.) 203. The opinion of the Circuit Court of Appeals (R. XVI, 7198–7218) is reported in 143 F. (2d) 488.

[1] In the record citations, roman numerals refer to the volume, arabic numerals refer to the page.

JURISDICTION

The judgment of the circuit court of appeals was entered on June 6, 1944 (R. XVI, 7219-7220). The petition for a writ of certiorari was filed on July 28, 1944. A writ of certiorari was granted on November 13, 1944, limited to Question No. 3 presented in the petition. By order entered January 3, 1945, the scope of review was enlarged to include Question No. 2 presented in the petition. Jurisdiction of this Court rests upon Section 19 (b) of the Natural Gas Act and Section 240 (a) of the Judicial Code, as amended by the Act of February 13, 1925.

QUESTIONS PRESENTED

The questions as to which a writ of certiorari was granted, as stated in the petition and in the order presented in petitioners' brief, are as follows:

(1)[1] Whether the Commission's action in treating petitioners' business as an entirety and refusing to make any allocation or separation with respect to petitioners' regulated and unregulated sales was beyond its statutory power.

(2) Whether limiting the sale price of petitioners' gas for resale so as to provide an over-all return of 6½ percent on the depreciated cost of petitioners' properties including those devoted to production and gathering of natural gas and excluding petitioners' tendered evidence as to

[1] Presented as question (3) in the Petition for Certiorari.

the market value of petitioners' gas leaseholds constituted an exercise of jurisdiction over production and gathering of natural gas in violation of the Natural Gas Act.

STATUTE INVOLVED

The relevant provisions of the Natural Gas Act of 1938 (52 Stat. 821; 15 U. S. C. 717) are set forth in Appendix A, *infra*, pp. 52–67.

STATEMENT

The proceedings before the Commission arose out of a complaint filed February 28, 1941, by the City of Detroit and County of Wayne, Michigan, alleging that the rates and charges of petitioners Panhandle Eastern Pipe Line Company and Michigan Gas Transmission Corporation, for natural gas sold to Michigan Consolidated Gas Company for resale for ultimate public consumption in that City and County, were unjust, unreasonable, and unduly discriminatory (R. XVI, 7002). The Commission, on its own motion, instituted an investigation on May 22, 1941, of all interstate wholesale rates and charges of such petitioners, and later expanded the investigation to include those of petitioner Illinois Natural Gas Company (R. XVI, 7061, 7088). Respondent Michigan Public Service Commission and respondent Michigan Consolidated Gas Company, also urging the propriety of a reduction in the challenged rates and charges, were permitted to intervene in the proceedings, which were consolidated for hearing

(R. XVI, 7024, 7046, 7064). After these proceedings were initiated, petitioner Panhandle Eastern Pipe Line Company acquired all the properties of the other two petitioners, which were then dissolved (Pet. Br. 4, n. 2).

After extensive hearings were had (R. I., 45–R. XVI, 7001) and petitioners' case was closed (R. VIII, 3975, 4011), counsel for Detroit and Wayne County, counsel for the Commission, and counsel for Michigan Consolidated Gas Company, in April 1942, filed separate motions with the Commission requesting an interim order reducing petitioners' rates by $6,800,479, $5,580,888, and $5,489,874 per annum, respectively (R. XVI, 7100, 7104, 7125). Following submission of briefs, the Commission, on September 23, 1942, entered its opinion and interim order here under review, finding that petitioners' interstate wholesale rates were excessive and requiring petitioners to reduce such rates on and after November 1, 1942, so that if the reduced rates had been in effect during 1941, there would have resulted a reduction in revenue of $5,094,384 (R. I, 15–37, 38–43).[1]

[1] The Commission's order (R. I, 42) required:

"(A) The rates and charges made, demanded, or received by the respondents for or in connection with their transportation and sale of natural gas in interstate commerce for resale for ultimate public consumption shall be so reduced as to reflect, when applied to respondents' 1941 transportation and sales, a reduction of not less than $5,094,384 per annum below their 1941 consolidated gross operating revenues of $17,789,573 * * *."

The Commission founded its order upon the $78,814,292 actual legitimate cost of petitioners' property in service on December 31, 1941; less $12,596,987 for accrued depreciation, depletion and amortization; plus $920,000 for working capital; which resulted in a rate base of $67,137,305.[4] The Commission allowed a 6½% return on the rate base, which return it found to be "fair and liberal." Using 1941 as the test year, the Commission allowed all operating expenses, including the annual depreciation expense, the exploration and development costs incurred by petitioners in that year as shown by their books, and Federal income taxes (R. I, 30–31).[5] With respect to increases in operating expenses which petitioners claimed would occur after 1941, including increased taxes and amortization of rate case expense, the Commission found, in the light of petitioners' earnings during the first three months of 1942, that these claimed increases in expenses would be more than offset by increased revenues (R. I, 30–33).

Petitioners' application for rehearing (R. XVI, 7141–7149) was denied by the Commission on

[4] There is no dispute as to the actual legitimate cost of petitioners' property (R. I, 21–22; Pet. 8). The amount of accrued depreciation was taken from petitioners' books, as petitioners had requested in their brief before the Commission (R. I, 23). The allowance for working capital was not questioned in the petition for review in the court below (R. I, 6–12).

[5] Two minor adjustments were made, which are not now in dispute (R. I, 30–31).

October 30, 1942 (R. XVI, 7150). Thereafter they filed a petition for review in the circuit court of appeals. That court heard argument on May 14, 1943 (R. XVI, 7196), but deferred its decision pending this Court's disposition of *Federal Power Commission* v. *Hope Natural Gas Co.*, 320 U. S. 591 (R. XVI, 7196). After this Court handed down its opinion in that case on January 3, 1944, the instant case, at the request of the court below, was resubmitted upon supplemental briefs and argument (R. XVI, 7196, 7197), and the court then entered its opinion and judgment on June 6, 1944, affirming the Commission's order (R. XVI, 7198, 7219).

SUMMARY OF ARGUMENT

1. The Commission, in determining the reasonableness of petitioners' interstate wholesale rates under the Act, declined, as unnecessary in the circumstances of the particular case, to make an allocation between petitioners' regulable (interstate wholesale) sales and their non-regulable (interstate direct industrial) sales. The Commission's finding as to the lack of necessity for such an allocation had a substantial basis in the record and was neither arbitrary nor unreasonable. Petitioners' own witness, while presenting an allocation study which segregated the total revenues received from the two classes of business, conceded that his study made no proper allocation of the charges which should be borne by each class, and

while suggesting that a "fair and equitable" allocation could be obtained by crediting to the wholesale business 50% of the apparent profits being derived by the direct industrial sales, he emphasized that the final determination was essentially a matter of "business judgment" to be made by the Commission. Petitioners' president testified that an allocation would be impracticable and unrealistic in view of the unified character of petitioners' business. These views as to the lack of necessity for an allocation were entirely warranted by the fact that petitioners had constructed no capacity for their direct industrial sales, and justified the Commission in treating such sales as a by-product of petitioners' wholesale business.

It may be doubted whether in the light of petitioners' position taken below it is still open to them to argue that nevertheless a formal allocation was essential to the preservation of their rights; but if such a contention may now properly be made, it is without basis in the provisions of the Act. Interstate industrial business is within the Commission's jurisdiction in many respects. It may be conceded that the Commission is without authority to prescribe rates on such business; but here the rate order did not, either in terms or in practical effect, alter petitioners' direct industrial rates. Petitioners under the order are entirely free to raise or lower their direct industrial rates, or maintain them at their 1941 level; and

in the light of this Court's decision in *Lone Star Gas Co.* v. *Texas*, 304 U. S. 224, it is clear that no jurisdictional defect is created by the mere failure to make a formal allocation in respect of the industrial business. The issue is one of confiscation only; and in the light of the liberal return allowed to petitioners by the rate order there is no basis for a claim that the order was in any sense confiscatory.

2. The action of the Commission in reflecting petitioners' production and gathering facilities in the rate base and then limiting the return to 6½% was not a regulation of "production or gathering" forbidden by Section 1 (b) of the Act. That section withholds from the regulatory authority of the Commission the *activity* of producing or gathering natural gas, but there is nothing therein to indicate a Congressional intent to preclude the Commission from considering either such facilities in calculating the rate base or the expenses incident thereto for the purpose of determining the reasonableness of the interstate wholesale rates. *Federal Power Commission* v. *Hope Natural Gas Co.*, 320 U. S. 591, 614, n. 25. The legislative history of the Act confirms this view. The Committee report, after stating that the negative language in Section 1 (b) was largely surplusage, also stated that the Act contemplated regulation along "more or less standardized lines". The

valuation of production and gathering facilities historically has been an integral part of the regulatory rate fixing procedure. *Dayton Power & Light Co.* v. *Commission*, 292 U. S. 290.

Sections 6 (a), 6 (b), 8 (a), 9 (a) and 10 (a) of the Act all contain language authorizing the Commission to ascertain the costs of production and gathering facilities. The language and legislative history of Section 14 (b) confirm the view that the Commission is required to investigate such costs. The uniform administrative interpretation of the Commission consistently has been to consider production and gathering facilities in fixing the rate base, and the Commission has so reported to Congress. Finally, legislative approval of the administrative interpretation may be inferred from the fact that when Section 7 was amended in 1942, no legislative change was made in respect of this matter although the Commission's administration of the Act was thoroughly reviewed.

Neither the Commission's refusal to allow the alleged "market value" of petitioners' leaseholds in the rate base nor its failure to calculate costs on a "field" or "commodity" price basis for the natural gas produced by petitioners constituted a deprivation of due process. Evidence of market value of the character offered by petitioners is not compelling or even persuasive. *Dayton Power & Light Co.* v. *Commission*, 292 U. S. 290, 296–

301. Evidence of field or commodity price of gas is open to the same objections. This is particularly true of the Panhandle and Hugoton fields. The only substantial market is furnished by the large pipelines which fix their own prices, and to speak of commodity value in such circumstances is unrealistic. This Court has recognized the peculiar situation which there obtains in *Thompson* v. *Consolidated Gas Co.*, 300 U. S. 55. The actual legitimate cost system adopted by the Commission on the other hand is just to consumers and pipelines alike. It considers costs as best calculated to insure continuity in the production of natural gas and the financial soundness of the pipelines themselves. The fact that it has become possible to finance such enterprises at progressively lower rates discloses that the investing public appreciates the ultimate soundness of the Commission's approach.

ARGUMENT

The order of the Commission here under review directed petitioners to reduce their interstate wholesale rates by an amount of not less than $5,094,384 per annum below the 1941 consolidated gross operating revenues of $17,789,573 (R. 4, 42). The Commission did not make an allocation of property, profits and expenses, holding that in the peculiar circumstances of this case it was unnecessary so to do. Petitioners, adverting to the fact that their consolidated gross revenues include

profits from both their regulable (interstate wholesale) sales and their non-regulable (interstate direct industrial) sales, contend that, under the statute, the Commission was required to make a formal allocation, supported by detailed findings, of their property, revenues and expenses; that the Commission's action in not doing so is a jurisdictional defect which vitiates the entire rate reduction order; and that the Commission, by considering petitioners' producing and gathering facilities and the expenses incident thereto, exercised a jurisdiction prohibited by Section 1 (b) of the Act.

We submit that, in the circumstances of this case, the Commission's rate reduction order was not arbitrary or unreasonable and that its finding that no allocation was necessary has a substantial basis in the record; that no formal allocation was required in the instant case; and that the Commission was clearly authorized to reflect petitioners' production and gathering facilities in the rate base and to consider the expenses incident thereto.

I

THE COMMISSION'S FINDING THAT NO ALLOCATION WAS NECESSARY IN THE CIRCUMSTANCES OF THIS CASE HAS A SUBSTANTIAL BASIS IN THE RECORD AND WAS NEITHER ARBITRARY NOR UNREASONABLE

The Commission, upon consideration of the evidence with respect to petitioners' regulable

(interstate wholesale) sales and their non-regulable (interstate direct industrial) sales, found that it was "unnecessary to make an allocation" in determining the reasonableness of petitioners' interstate wholesale rates under the Act. We submit that in the circumstances here presented, the Commission's action in this regard was neither arbitrary nor unreasonable.

At the hearing, petitioners presented an allocation study (Exh. 251; R. XIII, 5947–5955) through their witness Biddison,[7] showing that 91.57% of their total revenues, or $16,289,045, was received from their interstate wholesale sales and 8.43%, or $1,500,527, was received from their direct industrial customers (R. XIII, 5947). Of the total operating expenses of $7,425,826, including depreciation, but excluding Federal income taxes and return, this study assigned only $499,699 to the direct industrial business (R. XIII,

[6] Petitioners, for the first time, contend (Pet. Br. 8, 37) that the Commission erroneously assumed jurisdiction over their wellhead sales to Argus Natural Gas Company. This contention was not advanced in the petition for rehearing (R. XVI, 7147), the petition for review (R. I, 11–12), the briefs below, or the petition for certiorari. Moreover, petitioners' witness Biddison included these sales in his "regulated sales" (R. XIII, 5947, line 7). In any event, the revenue from these sales was negligible, amounting to less than four-tenths of one per cent of petitioners' gross revenues in the test year (See Pet. Br. 37 and R. I, 31).

[7] Biddison's testimony appears at R. VIII, 3631–3676, 3853–3881, 3919–3933

5947, lines 25–36, incl.). Thus, with revenues of $1,500,527 and assigned operating expenses of $499,699, the direct industrial business was shown to have earned $1,000,828 in the test year, before income taxes (See Pet. Br. 34). The exorbitant margin of profit of more than 200% thus shown[8] on petitioners' direct industrial business was obviously due to the fact that in this study such business had not been assigned its fair share of the cost of transporting gas through the main transmission pipeline.[9]

[8] This result appears all the more incongruous in the light of the fact that petitioners' rates for direct industrial gas in 1941 averaged only 17¢ per Mcf as compared with $1.00 for residential gas, 82.4¢ for commercial gas, and 28.7¢ for gas sold to other utilities (R. XIII, 5947, lines 1–20, incl.). Petitioners sold 1,730,142 Mcf to Missouri Power and Light Co. for boiler fuel at a price of 11¢ per Mcf (R. XIII, 5947).

[9] For example, petitioners did not allocate a single dollar of the main transmission line annual depreciation expense of $2,238,589 to the direct industrial business, but assessed all of such amount to the regulated business (R. XIII, 5955, line 5). Of the ad valorem taxes on the main transmission line, totaling $633,270, only $1,738, applicable to the laterals used exclusively for the direct industrial customers, was allocated to them (R. XIII, 5955). None of the main transmission line operating and maintenance costs was charged to the direct industrial business. For example, the transmission mains operating labor was $288,564, of which only $490 (applicable only to exclusively used laterals) was allocated to direct industrials; the maintenance cost of mains was $94,212, of which only $160 (applicable to exclusively used laterals) was allocated to the cost of conducting the direct industrial business (R. XIII, 5951, lines 15 and 27).

628119—45——3

Petitioners' witness recognized that his allocation study would impose an undue burden upon the wholesale business, since virtually all of the main transmission line costs would be saddled upon the domestic and commercial consumers. He admitted that his exhibit did not show the proper charges between the two classes of business (R. VIII, 3856). He testified that a further "step" was necessary to arrive at a fair and equitable distribution of the charges between petitioners' regulable and non-regulable sales. He recommended that a portion of the apparent profit of $1,000,828, shown by his exhibit to have been derived from the direct industrial business, should "as a matter of fairness and equity" be "made a charge against the non-regulated business and substantially paid to the regulated business as a fee for the privilege of using the equipment through which delivery of this non-regulated business is effected." He also emphasized that the determination of what amount should be credited to the regulated business is a matter of "business judgment" for the Commission to decide.[10] He further stated (R. VIII, 3873–3874):

[10] In view of the importance of this testimony, which was quoted only in part in petitioners' brief (p. 33), we set it forth in full at this point (R. VIII, 3856–3857):

"Q. Well, Exhibit No. 251 reflects the manner in which you, in your opinion, believe the allocation of costs should be made, doesn't it?

"A. Yes, when you go to allocating costs and that is all this purports to do, is to allocate the costs. I think there is

"Q. Now, Mr. Biddison, you have testified in many rate cases and I understand it is your opinion that the matter of this further allocation would be a matter of the exercise of enlightened judgment by those

---

another step necessary after you have allocated the costs. I have not carried out the other step but it is a matter of business judgment as to how much of profits of the one class of business ought to be paid to the other class, as a matter of fairness and equity, in business judgment.

"Q. Let me see if I understand your last answer. Are you now referring to the allocation of return?

"A. If you take some of the profits from the non-regulated business and credit to the costs of the other business considered as a rental charge for the privilege of using the facilities, you can consider that it has contributed to return and to depreciation.

"Q. I am sorry. I do not quite follow what you have in mind, Mr. Biddison. Maybe if you would explain that in a little different way I might understand you better.

"A. On page 1 of Exhibit No. 251, it is shown that before the modification from proposed new income tax rates at line 42, there is available from these non-regulated sales $651,766.70. Before the income tax of $349,062.28; there was available for income tax and return a little over $1,000,828.98. I think it would be entirely fair and just, in line with what Mr. Goodman commented last week, that some portion of that little over a million dollars should be made a charge against the non-regulated business and substantially paid to the regulated business as a fee for the privilege of using the equipment through which delivery of this non-regulated business is effected. In other words, I think you should first find out how much this non-regulated business is costing and then make some division of the profits from it.

"Now, what that division should be, I think is a matter of business judgment but, in fairness, I think there ought to be some division of it in spite of the fact that the language in the Colorado case does not indicate that to be the view of the Commission."

charged with the duty of making the decisions in this case. Is that right?

"A. That is right, and I further think that they should have the opinion of the experienced management in coming to their final conclusions on that matter."

Upon inquiry by the Trial Examiner as to his own view of a proper division, petitioners' witness expressed the opinion that the $1,000,828 of apparent profits from the direct industrial business (before Federal income tax) should be split "fifty-fifty," stating (R. VIII, 3874):

"* * * In that way, this non-regulated business has contributed half a million dollars a year *towards the reduction in cost of the regulated* business and if it does not contribute something, I do not think there is any justification for having the business." [Emphasis supplied.]

In addition to this testimony by petitioners' witness Biddison, petitioners' president testified that it would be "theoretical", "unrealistic," "not practical", and "a crazy idea" to make a detailed or formal allocation in this case in view of the unified character of the business (R. I, 34; R. VIII, 3960–3962).

In their brief before the Commission, counsel for petitioners requested that the Commission find that petitioners "have built no capacity" for their direct industrial sales, which are "incremental in nature", and that it is "reasonable" to allocate

"50 per cent of the net earnings from nonregulated sales as a credit to net earnings from regulated sales, as compensation for the temporary use of such facilities provided for regulated sales but used from time to time in transporting the gas for direct, interruptible, nonregulated sales, when not required for regulated sales." They requested that the Commission find:

> "27. On the basis of 1941 *pro forma* consolidated revenues, total operating revenues were $17,789,572, of which $16,289,045 are allocable to regulated sales, and $1,500,527 are allocable to nonregulated sales. A credit of $500,414, representing a charge against the nonregulated sales of one-half the profits resultant from such sales, increases total revenues from (and allocable to) regulated sales to $16,789,459."[11]

It was in this setting that the Commission for the reasons stated in its Opinion found that it would be fair and equitable to credit to the wholesale business any earnings of the direct industrial business in excess of a 6½% return for the use of the main transmission line facilities. Stated another way, the incidental direct industrial business was treated as a "by-product of the wholesale business, comparable to [petitioners'] gaso-

[11] Sec. 50.68 of the Commission's Rules and Regulations Under the Natural Gas Act provides that briefs "should include requests for such specific findings as the party thinks the Commission should make." 18 CFR (1943 Supp.) 4539.

line extraction business" (R. I, 34).[12] In such circumstances, it was, of course, unnecessary to make any formal or detailed allocation, and the Commission so held (R. I, 33–34).

We submit that in view of the foregoing there is no basis for any contention that the Commission's finding that no allocation was necessary represented arbitrary or unfair action.

Petitioners, however, seek to escape the effect of Biddison's testimony (Pet. Br. 30, 32–34). Although we have difficulty following the ramifications of petitioners' calculations and statements by which such conclusion is sought to be reached (Pet. Br. 32–34), it appears that they now contend that they are entitled to the $319,656 of apparent earnings on direct industrial sales in *addition* to the 6½% return fixed by the Commission on the entire business. Thus, petitioners seek to lay a basis for the claim that they were "deprived" of $319,656 by the Commission's action. This contention has no foundation in the record, is contrary to Biddison's testimony (R. VIII, 3857, 3872–3874) and represents a complete shift of

[12] Petitioners agreed in the hearing that the expenses and revenues in connection with the sale of gasoline extracted from the natural gas should be treated in like manner, i. e., as an integral part of petitioners' entire operations (R. I, 34). No contention has been advanced by petitioners that by so doing the Commission was exercising jurisdiction over their gasoline sales.

position from that taken by petitioners before the Commission.[15]

[15] In their principal brief before the Commission, petitioners stated (pp. 72–73):

"Application of Biddison's recommendation. Witness Biddison explained that Exhibit 251 was prepared for the purpose of determining the 'cost' to Respondents [petitioners] of the gas service subject to regulation and that not regulated; but that, with certain adjustments, *it could be used for a determination of the 'profit' earned from non-regulated sales of gas*, one-half of which he thought might well be credited to the regulated part of the business as a carrying charge for the use of facilities provided for that regulated business and used for unregulated service only to the extent not required and when not required for the regulated gas. [Emphasis supplied.]

"Earnings before Federal taxes. He explained that by the addition of lines 38 and 42, columns E and F, page 1 of that exhibit, it was disclosed that earnings before Federal taxes were $8,863,218 from sales of regulated gas and $1,000,828 from sales of the nonregulated gas—a total of $9,864,046. It was his business judgment that one-half these earnings of $1,000,828 (or $500,414) should be credited to the regulated gas as a carrying cost or charge. This would result in a *total earning* before such Federal taxes of $9,363,632 from the regulated gas and $500,414 from the nonregulated gas, the proportions of the total being 94.92 per cent and 5.08 per cent respectively. [Emphasis supplied.]

"Application of Federal income and excess profits taxes. Witness Biddison stated that after making this computation the approximate income and excess profits taxes should be applied proportionally to the earnings of the respective classes of sales, since it is earnings which fix the amounts of such taxes. The total tax payable on these earnings being $3,558,228, that sum may therefore be allocated between the earnings from regulated sales and earnings from nonregu-

It is thus apparent that the Commission's finding that no allocation was necessary in the circumstances of this case has a substantial basis in the record and was neither arbitrary nor unreasonable. Due process requires no more.

II

THE ABSENCE OF A FORMAL ALLOCATION IN THE INSTANT CASE DOES NOT INVALIDATE THE COMMISSION'S ORDER

The absence of a formal allocation in the instant case is not a jurisdictional defect, and the rate reduction order, being addressed to interstate sales for resale only, is to be tested by the ordinary criteria as to whether the rates prescribed were confiscatory *vel non*.

A. ALLOCATION IS NOT A JURISDICTIONAL REQUIREMENT

At the outset, it is to be noted that the Act does not in terms require an allocation, although it must have been a matter of common knowledge that the majority of the companies subject to the

---

lated sales, and the net operating revenues may thus be determined as follows:

	Regulated Sales	Non-regulated Sales
Indicated earnings before taxes	$9,363,632	$500,414
Taxes (aggregating $3,558,228)	3,377,470	180,758
Net Operating Revenues	5,986,162	319,656

jurisdiction of the Commission in respect to their interstate sales for resale also had intrastate sales and direct interstate industrial sales. Congress rather obviously left the problem of allocation to the expert judgment of the Commission. This it was at liberty to do, for it is clear that Congress could have provided for the same regulation over direct industrial sales as it did for interstate sales for resale. In any event we submit that allocation is not a jurisdictional requirement in the instant case, as the Act does not leave the interstate direct industrial sales wholly unregulated [14] and the rate order here under review neither operated nor purported to operate upon the direct sales.

1. *Jurisdiction over the direct industrial business of a natural gas company is not entirely withheld from the Commission.* While it may be conceded that the Commission has no authority to fix rates for direct industrial sales (see *Federal Power Commission* v. *Hope Natural Gas Co.*, 320 U. S. 591, 615–616), it does possess certain regu-

[14] There is nothing to indicate that the states have any jurisdiction over interstate direct industrial sales of gas and we do not understand petitioners to contend or suggest that their direct industrial sales are subject to state regulation. Such sales are made pursuant to contract and not under rates in which there might conceivably be some matter of local concern. Compare *Pennsylvania Gas Co.* v. *Public Service Commission*, 252 U. S. 23, 30–31, with *Missouri* v. *Kansas Gas Co.*, 265 U. S. 298, 307–309.

latory powers in respect of that phase of the business of a natural gas company. Section 1 (a) of the Act, *infra*, p. 52, declares "that Federal regulation in matters relating to the transportation of natural gas and the sale thereof in interstate and foreign commerce is necessary in the public interest." It is, of course, clear that the direct industrial business involved in the instant case comprises both interstate transportation and interstate sales. Section 4 (c) of the Act requires the filing with the Commission not only of all schedules embodying rates and charges subject to the jurisdiction of the Commission and the classification practices and regulations affecting such rates and charges, but also "all contracts which in any manner affect or relate to such rates, charges, classifications and services." Contracts for direct interstate industrial sales of course come within Section 4 (c).[15] Section 5 (a) of the Act authorizes the Commission either upon complaint or upon its own motion to investigate and determine whether any rate or charge subject to the jurisdiction of the Commission "is unjust, unreasonable, unduly discriminatory, or preferen-

[15] By Rule 54.30 of its Rules and Regulations Under the Natural Gas Act the Commission requires the filing of all contracts for direct industrial sales which involve sales in excess of 100,000 M. C. F. per year (7 Fed. Reg. 4824). The contracts involving petitioners' direct sales have been filed with the Commission.

tial," or whether "any rule, regulation, practice, or contract affecting such rate, charge, or classification is unjust, unreasonable, unduly discriminatory, or preferential." Inasmuch as the matters subject to the control exercised under Section 5 (a) are by the terms of the Act coextensive with those included in Section 4 (c), it follows that contracts covering direct sales in interstate commerce are not entirely outside the scope of the Act.

Petitioners' contentions that their interstate direct industrial business was to be entirely free of regulation is not persuasive (Br. 19–21).[16] They overlook the fact that Section 1 (b) makes the provisions of the Act applicable "to the transportation of natural gas in interstate commerce," and incorrectly state (Br. 19) that the section makes the provisions of the Act applicable only to the transportation and sale in interstate commerce of natural gas for resale. They rely upon the legislative history of H. R. 11662, which was not the bill enacted and which specifically excluded from the jurisdiction of the Commission authority to fix rates and charges "for the sale of natural gas

[16] The assertion of petitioners that it is immaterial whether the business "not subject to regulation by the Commission" is operated at a loss or at high profit (Br. p. 21) finds no foundation in the Act. A loss might burden the "regulated" business and a high profit might well be evidence that the "unregulated" business is not bearing its proper share of the costs.

for industrial use only."[17] No such provision appears in the Natural Gas Act.

2. *The rate reduction order of the Commission did not, either in terms or in effect, alter the direct industrial rates.* The order of the Commission directed petitioners to reduce their rates and charges for their interstate sales for resale for ultimate public consumption, effective as of November 1, 1940, so as to reflect, when applied to petitioners' 1941 transportation and sales, a reduction of not less than $5,094,384 per annum below their 1941 consolidated gross operating revenue of $17,789,573. Concededly the Commission, in thus determining what would be a just and reasonable rate on petitioners' wholesale business, considered their entire consolidated income available for return, including income from direct industrial sales. But the Commission's order operates prospectively. As to the years in which it is in effect, it prescribes merely that rates of sales for resale shall be maintained at a given level. This level was calculated on the basis of

[17] Thus, in reporting H. R. 11662, the Committee report stated (H. Rep. 2651, 74th Cong., 2d Sess., p. 1): "The sale of natural gas for industrial use only is also exempted from the jurisdiction of the Commission." In H. R. 6586, which emerged as the Natural Gas Act, no such language appeared in Section 1 (b) and both the House and Senate reports significantly refrained from making any such assertion. H. Rep. 709, 75th Cong., 1st Sess.; S. Rep. 1162, 75th Cong., 1st Sess.

a specified rate of return (6½%) for the test year on petitioners' entire business, but the order, even though based on such a rate of return, in no way fixes the rate of return which may be earned by petitioners during the years in which they may operate under the order. They are merely required to maintain their resale rates at the level fixed; they may vary their industrial rates as they will, up or down, or leave them the same; and they may earn such a return on their business, both direct industrial and resale, as business conditions and the effectiveness of their management will allow. The order, therefore, not only falls short of directly regulating their rates on industrial business; it does not even regulate such rates indirectly by limiting the return which may be secured from such business.

3. *An allocation is not required merely because a portion of an integrated utility's operations is not subject to the Commission's jurisdiction.* This precise question was before this Court in *Lone Star Gas Co.* v. *Texas,* 304 U. S. 224. There the Railroad Commission of Texas had issued an order requiring a reduction in the rates charged in Texas by the company, which operated an integrated production, gathering and transmission system for the sale of natural gas

in Texas and Oklahoma. The State Commission had treated the system as a unit in establishing a rate base and had made no allocation of the company's property, profits and expenses. (304 U. S. at 227, 239, 241). In a suit to enforce the order, the state court had directed that a segregation of property between intrastate and interstate functions be made. The Court of Civil Appeals for the Third Judicial District of Texas reversed the lower court but affirmed its holding that it was necessary to allocate or segregate the property used in Texas. This Court, after holding that "The Commission did not attempt to regulate the interstate transportation of gas" nor the "sales and deliveries of gas in interstate commerce" (304 U. S. at 236), stated (p. 241):

> We think that this ruling as to the necessity of segregation, and that the sufficiency of appellant's evidence should be determined by that criterion, was erroneous. This was not a case where the segregation of properties and business was essential in order to confine the exercise of state power to its own proper province. Compare *Smith* v. *Illinois Bell Telephone Co.*, 282 U. S. 133, 148, 149.

Similarly the order of the Commission here did not operate upon any rates other than those for resale. The decision in the *Lone Star* case demonstrates, we submit, that there was no juris-

dictional necessity in such a situation for making an allocation.[18]

It is thus clear that in this, as in other judicial reviews of rate reduction orders, the essential question is that of confiscation. *Railroad Commission* v. *Pacific Gas Co.*, 302 U. S. 388, 394; *Federal Power Commission* v. *Natural Gas Pipeline Company*, 315 U. S. 575, 585. Where certain of the interstate rates of a natural gas company are not subject to regulation by the Commission, but the order of the Commission is directed exclusively to those rates over which it has jurisdiction, the purpose to be served by an allocation is clear. The allocation between the regulable and non-regulable sales assists the Court in determining on review whether the prescribed rates violate constitutional standards. *Banton* v. *Belt Line Ry. Corp.*, 268 U. S. 413; *Wabash Val-*

[18] The contention of petitioners (Br. 39), also vigorously urged by petitioners in *Canadian River Gas Co.* v. *Federal Power Commission*, No. 380 (Pet. Br., pp. 72–75), that a segregation or allocation of physical property is required is without merit. Whatever current vitality the *Minnesota Rate Cases*, 230 U. S. 352, 435, and *Smith* v. *Illinois Bell Telephone Co.*, 282 U. S. 133, 150, now possess in respect of a state regulatory body's failure to segregate physical property when the question of state regulation of interstate commerce is concerned (but see *Lone Star Gas Co.* v. *Texas*, 304 U. S. 224, 239, 241), the rule is well settled that in cases not involving any such conflict of jurisdiction a fair division of costs alone is adequate. *Banton* v. *Belt Line Ry. Corp.*, 268 U. S. 413, 421; *Wabash Valley Elec. Co.* v. *Young*, 287 U. S. 488, 498–500; cf. *Houston* v. *Southwestern Tel. Co.*, 259 U. S. 318, 322–323.

ley Elec. Co. v. *Young*, 287 U. S. 488, 497–498. It is in this light, we submit, that the question of the necessity of an allocation must be approached.[19]

B. THERE WAS NO CONFISCATION

In the instant case, there is no significance to the fact that the amount of the reduction in petitioners' interstate wholesale rates was measured by the difference between their total revenues and a fair return on all their properties. It was petitioners' resale rates alone which were directed to be reduced. Petitioners now contend that in the test year they were actually earning in excess of a 6½% return on their direct industrial sales, and that this return cannot be maintained under the rates fixed by the Commission without reducing

[19] While a failure to make a suitable allocation or allowance of costs in an appropriate case may be a denial of due process (cf. *Banton* v. *Belt Line Ry. Corp.*, 268 U. S. 413, 421; *Columbus Gas Co.* v. *Commission*, 292 U. S. 398, 404–405; Beutel, *Valuation As A Requirement Of Due Process*; 43 Harv. L. R. 1249, 1268–1274), petitioners are in no position here to claim a denial of due process, since the Commission's finding that an allocation was unnecessary was based upon the testimony of petitioners' own witnesses. See *supra*, pp. 12–16. Where factors are present which indicate that an allocation is appropriate, as in *Colorado Interstate Gas Co.* v. *Federal Power Commission*, *Canadian River Gas Co.* v. *Federal Power Commission*, and *Colorado-Wyoming Gas Co.* v. *Federal Power Commission*, Nos. 379, 380 and 575, this Term, the Commission makes an allocation. The "broad distinction" between those cases and the case at bar was explicitly recognized by petitioners' witness Biddison, who testified that the lack of provision of capacity for petitioners' industrial customers justified a different treatment (R. VIII, 3868–69).

below 6½% their rate of return on their interstate wholesale business. Even assuming that in the light of their position taken at the hearing petitioners are now free to advance this contention, the conclusion of confiscation does not follow. It cannot seriously be contended that a return of 6½%, which the Commission here found to be "fair and liberal" for purposes of this interim order (R. I, 30), is the lowest possible permissible rate of return (see Hearings, Committee on Interstate and Foreign Commerce, on H. R. 4008, 75th Cong., 1st Sess., p. 35). The Commission's return, computed at 6½% on the rate base of $67,137,305, amounted to $4,363,925. Even if this return were reduced by $331,000 (the maximum amount of which the petitioners claim (Pet. Br. 33–36) they were "deprived"), the remaining return would be $4,032,925, slightly in excess of a 6% rate of return on the over-all rate base. In this connection, it may be noted that this Court has found no constitutional difficulty with a rate of return for a natural gas utility of 6 per cent. *Lone Star Gas Co.* v. *Texas*, 304 U. S. 224. We, accordingly, submit that no allocation is required in the instant case to aid the Court in determining whether the rate reduction order resulted in confiscation.

The end result of the Commission's order "viewed in its entirety" is not "unjust and unreasonable" under the standards laid down by this Court. *Federal Power Commission* v. *Hope Nat-*

ural Gas Co., 329 U. S. 591, 602; *Federal Power Commission* v. *Natural Gas Pipeline Company*, 315 U. S. 575, 585–586. The Commission's rate order allowing the 6½% return on the rate base will permit petitioners to earn $4,363,925 upon the basis of the test year after meeting all operating expenses, including annual depreciation expenses, exploratory and development costs, and Federal income taxes (R. I, 30). The undisputed annual cost of servicing petitioners' long-term debt is $957,786 (or 2.88%) and the cost of servicing the preferred stock is $939,000 (or 5.8%), a total of $1,896,786 (R. XIV, 6097), which leaves $2,467,139 for petitioners' $20,184,175 of common stock, a return upon such stock of 12% (R. XII, 5501). Assuming even that petitioners are entitled to a return on their surplus, the earnings of $2,467,139 would provide a return of 9 per cent on the combined common stock and surplus of $27,650,000 (R. XII, 5501). The allowed rate of return, as the Commission found (R. I, 28–30), is commensurate with the returns on investments in other enterprises having corresponding risks and is more than sufficient to insure confidence in petitioners' financial integrity. There is thus no room for any contention that the rate afforded petitioners is "unjust and unreasonable." Cf. *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U. S. 575, 586.

III

THE COMMISSION DID NOT EXCEED ITS JURISDICTION WITH RESPECT TO PETITIONERS' PRODUCING AND GATHERING FACILITIES

Petitioners contend that the Commission was under a statutory duty by reason of Section 1 (b) of the Act to eliminate petitioners' producing and gathering facilities from the rate base, to disallow expenses of producing and gathering, and in lieu thereof, to allow a so-called "field price" for the gas produced by petitioners (Pet. Br. 48). We submit that, as this Court held in *Federal Power Commission* v. *Hope Natural Gas Co.*, 320 U. S. 591, 614, n. 25, there is no merit in this contention, which was raised for the first time in this proceeding in the reply brief which petitioners filed in the court below.[20] While it is clear that under Section 1 (b) of the Act the Commission has no jurisdiction to regulate "production and gathering" as such, the Commission, in determining the reasonableness of a natural gas company's interstate wholesale rates, properly reflects its production and gathering facilities in

[20] In the proceedings before the Commission, petitioners admittedly "did not attempt" to segregate their producing and gathering properties or the expenses incident thereto (Pet. Br. 49); nor did petitioners raise the objection in their petition for rehearing (R. XVI, 7141-7148), as required by Section 19 (b) of the Act, or in their petition for review in the court below (R. I, 1-44).

the rate base, and properly considers the expenses, including depletion, incident thereto. This is apparent from the purposes and provisions of the Natural Gas Act, as well as its legislative history.

Section 1 (a) of the Natural Gas Act declares that "Federal regulation *in matters relating to* the transportation of natural gas and the sale thereof in interstate and foreign commerce is necessary in the public interest" (emphasis supplied), and in accordance with this declaration of policy, Section 1 (b) provides that the Act "shall apply to the transportation of natural gas in interstate commerce, to the sale in interstate commerce of natural gas for resale for ultimate public consumption for domestic, commercial, industrial, or any other use, and to natural-gas companies engaged in such transportation or sale."

As petitioners tacitly recognize (Pet. Br. 46), the above quoted provision in Section 1 (b), considered alone, clearly vests the Commission with jurisdiction over the production and gathering facilities of a natural-gas company. Petitioners contend, however, that the Act as a whole indicates that Congress intended to exclude from regulation the production and gathering phase of the business of a natural-gas company. In support of this contention petitioners principally rely upon the "but" clause in Section 1 (b), which specifies that the Act "shall not apply to any other transportation or sale of natural gas or to the local

distribution of natural gas or to the facilities used for such distribution or *to the production or gathering of natural gas*" (emphasis supplied).

At the outset, it may be conceded that Section 1 (b) withholds from the regulatory power of the Commission the *activity* of producing or gathering natural gas, and that accordingly the Commission has no authority over such matters as, for example, the determination of the drilling or spacing of wells in the field, the number of wells to be drilled in a common reservoir, proration of the production of oil or gas, or cycling or other recovery operations. However broad may be the catalogue of activities thus excluded from the Commission's jurisdiction, we submit that there is no warrant for assuming that Congress, by excluding such activities, intended to preclude the Commission from reflecting the production and gathering facilities of a natural-gas company in the rate base and considering the expenses incident thereto for the purpose of determining the reasonableness of interstate wholesale rates under the Act.

The legislative history confirms the fact that the "but" clause in Section 1 (b) does not remove from the Commission's jurisdiction what would otherwise be subject thereto by reason of its authority over the transportation and sale of natural gas in interstate commerce for resale under the first part of Section 1 (b). Thus, the House

Committee on Interstate and Foreign Commerce in reporting the bill (H. R. 6586, 75th Cong., 1st Sess.) which became the Natural Gas Act, quoted the "but" clause in its report (H. Rep. No. 709, 75th Cong., 1st Sess., p. 3) and then stated:

> "*The quoted words are not actually necessary,* as the matters specified therein could not be said fairly to be covered by the language affirmatively stating the jurisdiction of the Commission, but similar language was in previous bills, and, rather than invite the contention, however unfounded, that the elimination of the negative language would broaden the scope of the act, the committee has included it in this bill. That part of the negative declaration stating that the act shall not apply to 'the local distribution of natural gas' *is surplusage* by reason of the fact that distribution is made only to consumers in connection with sales, and since no jurisdiction is given to the Commission to regulate sales to consumers the Commission would have no authority over distribution, whether or not local in character." [Emphasis supplied.]

Section 5 (a) of the Act places the duty upon the Commission to determine "the just and reasonable rate, charge * * * to be thereafter observed and in force, and * * * fix the same by order." In both *Federal Power Commission* v. *Natural Gas Pipeline Co.*, 315 U. S. 575, and *Federal Power Commission* v. *Hope Natural Gas*

Co., 320 U. S. 591, the Commission, without challenge by either the natural-gas companies or this Court, included the production and gathering facilities in the rate base on which a return was allowed. Indeed, in the *Hope* case, this Court observed (320 U. S. 616) that the Natural Gas Act contemplated "regulation along recognized and more or less standardized lines", citing H. Rep. 709, *supra*, p. 3. The valuation of production and gathering facilities historically has been an integral part of the regulatory procedure in fixing rates for natural gas. *Dayton Power & Light Co. v. Commission*, 292 U. S. 290; *Lone Star Gas Co. v. Texas*, 304 U. S. 224.

There are numerous provisions in the Natural Gas Act which clearly indicate that the Commission has jurisdiction over the production and gathering properties of a natural-gas company to the extent necessary to carry out its functions under the Act and particularly its principal function of determining the reasonableness of the company's interstate wholesale rates. Thus, Section 6 (a) authorizes the Commission to "investigate and ascertain the actual legitimate cost of the property of every natural-gas company, the depreciation therein, and, when found necessary for rate-making purposes, other facts which bear on the determination of such cost or depreciation and the fair value of such property." Section 6 (b)

requires every natural-gas company, upon request, to file with the Commission "an inventory of all or any part of its property and a statement of the original cost thereof." It will be noted that Section 6, which is directly related to the Commission's rate-making powers, extends to all the property of a natural-gas company. Similarly, Section 8 (a), in authorizing the Commission to prescribe uniform and correct accounting for natural-gas companies, extends to all the property of such companies.[21] And under Section 9 (a), the Commission is authorized to determine and to fix by order the proper and adequate rates of depreciation and amortization "of the several classes of property of each natural-gas company used or useful in the production, transportation, or sale of natural gas." That the Commission's authority under this section is directly related to its rate-making powers is indicated by the proviso that nothing in that section shall limit the power of a state commission to determine the rates of depreciation or amortization to be allowed for the purpose of determining rates or charges subject to state regulation. Under Section 10 (a) the Com-

[21] Section 8 (a) of the Natural Gas Act is identical with and was taken from Section 301 (a) of the Federal Power Act. In reporting out the latter, the Senate Committee on Interstate Commerce stated (S. Rep. No. 621, 74th Cong., 1st Sess., p. 53) that "the authority of the Commission over the accounts of companies under its jurisdiction extends to the entire business of such companies."

mission is authorized to require natural-gas companies to file reports giving full information as to assets and liabilities as well as the cost of maintenance and operation "of facilities for the production, transportation, or sale of natural gas."[22]

The conclusion that Congress contemplated that the Commission would consider the production and gathering properties of a natural-gas company in determining interstate wholesale rates, is reinforced by the provisions and legislative history of Section 14 (b) of the Act. That section authorizes the Commission, after hearing, to determine the adequacy or inadequacy of the gas reserves of natural-gas companies, and, also after hearing, to "determine the propriety and reasonableness of the inclusion in operating expenses, capital, or surplus of all delay rentals or other forms of rental or compensation for unoperated lands and leases." The section further provides that the Commission, for purposes of such determinations, may require each natural-gas company to file copies of "all its lease and royalty agreements with respect to such gas reserves."

The direct relation of Section 14 (b) to the Commission's rate-making authority is clearly

[22] Section 5 (b) further provides that the Commission "may investigate and determine the cost of the production or transportation of natural gas by a natural-gas company in cases where the Commission has no authority to establish a rate governing the transportation or sale of such natural gas."

indicated by its legislative history. As introduced, the bill (H. R. 4008, 75th Cong., 1st Sess.) which, as amended (H. R. 6586, 75th Cong., 1st Sess.), became the Natural Gas Act, did not contain the provisions of Section 14 (b).[23] In the hearings before the House Committee the National Secretary of the Cities Alliance urged that the provisions of Section 14 (b) be added to the bill, "to prevent great pipe-line corporations from acquiring more acreage than is necessary to supply the consuming public which it serves, and so far as the proposed amendment is concerned, would keep them from passing on the charge of carrying that property to the consuming public." He recognized that he could not ask the Committee "to go so far as to prevent them from making the purchase, if they want to, but we can ask that provision can be made whereby the Commission can see that the cost of carrying those excess acres, that are not necessary in the public interest, shall not be taken into consideration in passing upon the question of what are proper rates to be charged the consuming public" (Hearings on H. R. 4008, 75th Cong., 1st Sess., pp. 60, 67, 84).

The purpose of Section 14 (b) is further apparent from the testimony of Mr. William A. Dougherty before the Committee. Mr. Dougherty,

[23] The provisions of Section 14 (b) were contained in another bill (H. R. 5711, 75th Cong., 1st Sess.) which the Committee then had before it in addition to H. R. 4008.

who identified himself as a New York attorney connected with the management of certain natural gas pipe-line companies, including Colorado Interstate Gas Company (Petitioner in No. 379, this Term), which he named (Hearings, p. 123), objected to the proposed amendment because of the additional expense which would be involved in filing copies of all leases and royalty agreements. He contended that such a requirement was "not necessary" since the "only purpose of having information on lease and royalty agreements is when you are determining a rate and when you are going to determine a rate you can have those things brought in" (Hearings, p. 131). Mr. Dougherty further stated that careful consideration should be given to the provisions of the proposed amendment authorizing the Commission to determine the adequacy or inadequacy of gas reserves, and pointed out that "the Commission can exclude carrying charges of vast amounts of reserves as charges that have no immediate bearing on the immediate rate" (Hearings, p. 132). He added that "the law already gives the Commission the right to exclude delay rentals if the Commission feels that the reserve for which the delay rentals are included are too extensive, and I think the Commission would have that right even without this wording with respect to determining the adequacy or the inadequacy of gas reserves" (Hearings, pp. 132–133).

The hearings which the House Committee on Interstate and Foreign Commerce held on the first predecessor bill (H. R. 11662, 74th Cong., 2nd Sess.) which was reported out (H. Rep. 2651, 74th Cong., 2nd Sess.) confirm the Commission's view. There the then Solicitor of the Federal Power Commission, Dozier A. DeVane, agreed with a member of the committee that the Commission "would go into all the great natural gas fields of this country to determine costs" and "ascertain the cost of generating plant, and all the facilities, and, of course, build up a proper foundation for your rate finally to be sustained" as was done under Title II of the Federal Power Act (Hearings, pp. 31–32).

In addition, the Commission's administrative interpretation of the Act in this connection is of particular significance since it has been impliedly approved by Congress. The Commission in determining the reasonableness of interstate wholesale rates has consistently reflected the company's production and gathering facilities in the rate base.[21] This administrative interpretation

[21] *Illinois Commerce Comm.* v. *Natural Gas Pipeline Co.*, 35 P. U. R. (N. S.) 41, affirmed 315 U. S. 575; *Re Lone Star Gas Co.*, Order of May 4, 1942, in Docket No. G-209; *Cleveland* v. *Hope Natural Gas Co.*, 44 P. U. R. (N. S.) 1, affirmed 320 U. S. 591; *Re El Paso Natural Gas Co.*, Order of October 29, 1942, in Docket No. G-257; *Re Northern Natural Gas Co.*, 47 P. U. R. (N. S.) 74.

of the Act was brought to the attention of Congress in the Commission's Twentieth Annual Report for the year 1940, which summarized the Commission's work in connection with major rate cases and in so doing, stated (p. 77):

> *Gas reserves.*—As the natural-gas industry is an extractive industry, *one of the important elements of cost which must be determined pertains to the exhaustion of the service life of the properties due to the depletion of the natural-gas reserves which the properties were constructed to produce or transport.* The Commission's geologists have been engaged in estimating the volume of gas reserves in a number of important fields, among them the Panhandle field in Texas, the Hugoton field in Kansas and a major portion of the fields located in West Virginia, Pennsylvania, and New York. A few years' difference in the estimated life of available gas reserves supplying a given market may *make a large difference in the rates* which can be justified for that area. [Emphasis supplied.] [25]

Soon after this report was submitted, the House Committee on Interstate and Foreign Com-

[25] The report also pointed out that the Commission's staff, in connection with the organization of natural gas rate cases "along the lines indicated", had made four comprehensive field investigations, including the "Canadian River Gas Co., Colorado Interstate Gas Co., and Colorado-Wyoming Gas Co. in the Mid-West," the proceedings now under review in Nos. 379, 380 and 575, this Term.

merce held hearings on a bill (H. R. 5249, 77th Cong., 1st Sess.) to amend Section 7 of the Natural Gas Act to broaden the Commission's jurisdiction with respect to certificates of public convenience and necessity. Following extensive hearings, during which the Commission's administration of the Act was fully explored (see Hearings pp. 34–35, 40–46, 60–61), the bill was favorably reported and enacted on February 7, 1942.

We accordingly submit that the Commission had jurisdiction to reflect petitioners' producing and gathering facilities in their rate base, and to consider the expenses incident thereto in determining the reasonableness of their interstate wholesale rates. And the contention to the contrary which petitioners now advance therefore furnishes no support to their claim that the Commission should have found and allowed a so-called "field price" for the gas which they produce.

IV

IN DETERMINING THE REASONABLENESS OF PETITIONERS' INTERSTATE WHOLESALE RATES THE COMMISSION IS NOT REQUIRED TO VALUE THE GAS WHICH THEY PRODUCE ON THE BASIS OF A "FIELD PRICE"

Petitioners contend that the Commission's failure to determine and allow a so-called "field price" for the gas which they produce "was arbitrary, discriminatory, lacking any rational basis and

amounted to a denial of due process" (Pet. Br. 54). They also contend that a second approach which substantially would have achieved the same result—including leaseholds in the rate base at their market value—was also improperly rejected by the Commission (Pet. Br. 49). We submit that these contentions, not being supported by the alleged absence of jurisdiction over production and gathering facilities (pp. 31–42, *supra*), resolve themselves into the sole question of whether the "end result" of the Commission's rate order is confiscation (*Federal Power Commission* v. *Hope Natural Gas Co.*, 320 U. S. 591, 602) and this Court did not grant review of that question presented in the petition (p. 3).

In any event, petitioners' contention (Pet. Br. 52) that its leaseholds "can be sold" for more than $8,000,000 is based upon the opinion evidence of their own witness. The "value" ranging from $100 to $5 per acre (R. IX, 4199) which this witness assigned to the leaseholds reflected the assumed "value" from the demand for gas by petitioners' customers and the construction of pipeline facilities to serve them (R. IX, 4192). Such "value" was also enhanced by the benefits of conservation legislation (R. IX, 4193). This was thus the same type of testimony which this Court condemned in the *Dayton Power & Light Company* case (292 U. S. 290, 299):

> * * * But plainly opinions thus offered, even if entitled to some weight, have

> no such conclusive force that there is error of law in refusing to follow them. This is true of opinion evidence generally, whether addressed to a jury [cases cited] or to a judge [cases cited] or to a statutory board [cases cited]. There are reasons why the principle has special application here. In the first place, the intrinsic value of the leases is dependent upon the capacity of the lands to yield productive wells, a capacity seldom to be judged with even a fair approach to certainty until tested by experience. *Natural Gas Co. of W. Va. v. Public Service Comm.*, 95 W. Va. 557, 569, 121 S. E. 716. In the second place, the profits to be earned in a regulated business must vary with the rates established by the supervising agencies of government, with the result that prophecies, however radiant, may be upset over night by the publication of a lower schedule.

Obviously, testimony of such a character is not so compelling as to require the Commission to disregard the actual legitimate cost of the properties involved.

As indicated in petitioners' brief (pp. 53–54), there is no essential difference between petitioners' claim of a so-called "field price" for the natural gas which they produce and their claim of the "market value" of their leaseholds. While evidence as to field price is subject to the same infirmities as were attributed in the *Dayton* case to

evidence of market value, the vice of the "field price" test lies even deeper.

The only substantial markets for gas in large reserves, such as the Hugoton and Panhandle fields, are located at points distant from the fields, and in order to transport gas to these markets it is necessary to construct expensive pipe lines.[26] Before embarking on such an undertaking, it is essential that the company constructing the line be assured of an adequate supply of gas. This is accomplished either by acquiring sufficient producing and proved gas acreage to insure future supplies, or by entering into long-term contracts with producers of gas under which the parties are bound to the sale and purchase of the gas as long as it shall be produced in paying quantities. Federal Trade Commission Report pursuant to Senate Resolution No. 83, 70th Cong., 1st Sess., Vol. 84–A, pp. 70 *et seq.* In a sense the cost which the pipeline company will be required to pay for the natural gas is determined at the inception of the enterprise. In a setting such as this the concept of a "field" or commodity price is unrealistic.

This Court had occasion to review the situation which obtains in the Panhandle field in *Thompson* v. *Consolidated Gas Co.*, 300 U. S. 55. Without access to pipelines and their distant

[26] E. g., petitioners' pipeline represented an investment in excess of $70,000,000 (R. XII, 5527). Natural Gas Pipeline Co. had a book cost in excess of $60,000,000 (315 U. S. at 579).

markets, natural gas produced in the fields had no commercial value other than the extraction of natural gasoline or the production of carbon black (id., pp. 59, 70). In the *Thompson* case, this Court held unconstitutional a Texas statute which sought to compel large pipeline companies to purchase a part of their gas requirements from private producers. There the question of commodity price was not even reached—the pipeline companies did not want the gas at any price.

The value which gas obtains in a market such as the Panhandle or Hugoton field depends exclusively upon the price which the few large pipeline companies are willing to pay. Cf. *United Fuel Gas Co.* v. *Railroad Commission*, 278 U. S. 300; *Dayton Power & Light Co.* v. *Commission*, 292 U. S. 290, 301. Whatever might be the situation where the demand equals or exceeds the supply of natural gas, it is apparent that where the market can absorb only a small fraction of the gas produced the purchaser is in a superior bargaining position. In such circumstances the commodity price, if the law of supply and demand is permitted to operate, will necessarily tend to reflect cost alone. And should competition be sufficiently keen, that cost would probably not carry a 6½% profit.[27] Were petitioners deprived of their markets outside the state, their gas would have little if any value.

[27] The Commission, in fixing costs in the instant case, included therein a return of 6½% on the rate base.

Prevailing prices accordingly do not establish a commodity value. When the sales contracts extend for the life of the wells, and vary among themselves, the rates fixed therein merely reflect what the parties to the contract at one time considered to be a fair price. It could currently be either more or less. There is no such thing as a true commodity price unless there are frequent adjustments in price to reflect the changing supply and demand. Moreover, the adoption of a commodity price would open the door for the establishment of fictitious prices. Over 80% of the total area of the Panhandle fields is controlled by major pipeline companies (300 U. S. at 60). It would be possible for these companies to buy small amounts of gas from independent producers at a high Mcf price and accordingly claim that the price so paid represented the commodity value to which they were entitled in calculating the value of the gas which they produced themselves. "When the pipe-line interests control the only outlets to markets, an arbitrary setting of field prices seems inevitable." [28]

On the other hand, the cost system adopted by the Commission is fair alike to consumers and natural-gas companies.[29] It is readily apparent that if a field such as Panhandle or Hugoton

[28] Federal Trade Commission Report No. 84-A, p. 133.

[29] Contrary to the contentions which petitioners advance on the basis of the tabulation in Appendix C to their brief, as we show in Appendix B of this brief, when actually computed, the allowed cost of gas produced by petitioners aver-

should be discovered near Chicago or Detroit, the cost of delivering gas from such field to those cities would be low and gas companies which were incurring higher transportation costs in delivering gas from distant points would be faced with bankruptcy if they were held to the commodity price.[30] On the other hand the Commission allows the acquisition costs of leaseholds, the delay rentals thereon while they are being held in reserve, well drilling and exploratory costs and all expenses incident to the operation of the gas leaseholds, including royalty payments. Thus the pipeline companies, whose business in the final analysis consists of the interstate sale of gas at wholesale, are assured of the cost of producing the commodity which they sell. Certainly, it may not be said that the action of the Commission in electing to use the cost rather than the commodity value of the gas lacks a rational basis. See *Federal Power Commission* v. *Hope Natural Gas Co.*, 320 U. S. 591, 615–616. Indeed, since the Commission has established its policy of allowing cost of production, investors have been lending money at progressively lower rates (Exhibit 253, Charts Nos. 33 and 34, R. XIV, 6031, 6033). The average yield on bonds, debentures and notes issued

ages 3.75¢ per Mcf as compared with the 3.71¢ per Mcf average cost of gas purchased.

[30] It is significant to note that Hope Natural Gas Company purchased gas at prices lower than the cost of producing its own gas. See record in No. 34, Oct. Term 1943, II, 309, 342.

by natural-gas companies has declined from 4.59% in 1936 to 3.11% in 1941 (ibid.).

Finally, if the commodity price rather than cost were adopted by the Commission there would no longer be any necessity for treating the gas business as presenting any hazards peculiar. As a result, the transmission facilities, which constitute the larger portion of the pipe lines investment, would be entitled to a lower rate of return than 6½%.[31]

We accordingly submit that there was no requirement that the Commission, in fixing petitioners' rates for the interstate sale for resale of natural gas, should fix the cost of the gas so sold on a commodity rather than a cost of production basis.

---

[31] If the return on petitioners' transmission facilities were limited to 5½% or 6%, the liberality of the return on their production facilities under the Commission's order is apparent:

	Return allowed on Production Property	
	If Other Property Entitled to 5½%	If Other Property Entitled to 6%
1. Rate base allowed	$67,137,305	$67,137,305
2. Deduct: Depreciated cost of production property (See Pet. Br. App. C)	2,555,473	2,555,473
3. Rate base—other property	64,581,832	64,581,832
4. Total return allowed	4,363,925	4,363,925
5. Return on property other than production property	3,552,000	3,874,910
6. Return on production property	811,925	489,015
7. Per cent of return allowed on production property	31.8%	19.1%

CONCLUSION

For the reasons stated, it is respectfully submitted that the decision below should be affirmed.

APPENDIX A

The pertinent provisions of the Natural Gas Act of 1938, c. 556, 52 Stat. 821 (15 U. S. C. § 717 *et seq.*), as amended by the Act of February 7, 1942 (56 Stat. 83), are as follows:

SECTION 1. (a) As disclosed in reports of the Federal Trade Commission made pursuant to Senate Resolution 83 (Seventieth Congress, first session) and other reports made pursuant to the authority of Congress, it is hereby declared that the business of transporting and selling natural gas for ultimate distribution to the public is affected with a public interest, and that Federal regulation in matters relating to the transportation of natural gas and the sale thereof in interstate and foreign commerce is necessary in the public interest.

(b) The provisions of this act shall apply to the transportation of natural gas in interstate commerce, to the sale in interstate commerce of natural gas for resale for ultimate public consumption for domestic, commercial, industrial, or any other use, and to natural-gas companies engaged in such transportation or sale, but shall not apply to any other transportation or sale of natural gas or to the local distribution of natural gas or to the facilities used for such distribution or to the production or gathering of natural gas.

SEC. 4. (a) All rates and charges made, demanded, or received by any natural-gas company for or in connection with the

transportation or sale of natural gas subject to the jurisdiction of the Commission, and all rules and regulations affecting or pertaining to such rates or charges, shall be just and reasonable, and any such rate or charge that is not just and reasonable is hereby declared to be unlawful.

(b) No natural-gas company shall, with respect to any transportation or sale of natural gas subject to the jurisdiction of the Commission, (1) make or grant any undue preference or advantage to any person or subject any person to any undue prejudice or disadvantage, or (2) maintain any unreasonable difference in rates, charges, service, facilities, or in any other respect, either as between localities or as between classes of service.

(c) Under such rules and regulations as the Commission may prescribe, every natural-gas company shall file with the Commission, within such time (not less than sixty days from the date this act takes effect) and in such form as the Commission may designate, and shall keep open in convenient form and place for public inspection, schedules showing all rates and charges for any transportation or sale subject to the jurisdiction of the Commission, and the classifications, practices, and regulations affecting such rates and charges, together with all contracts which in any manner affect or relate to such rates, charges, classifications, and services.

(d) Unless the Commission otherwise orders, no change shall be made by any natural-gas company in any such rate, charge, classification, or service, or in any rule, regulation, or contract relating thereto, except after thirty days' notice to

the Commission and to the public. Such notice shall be given by filing with the Commission and keeping open for public inspection new schedules stating plainly the change or changes to be made in the schedule or schedules then in force and the time when the change or changes will go into effect. The Commission for good cause shown, may allow changes to take effect without requiring the thirty days' notice herein provided for by an order specifying the changes so to be made and the time when they shall take effect and the manner in which they shall be filed and published.

(e) Whenever any such new schedule is filed the Commission shall have authority, either upon complaint of any State, municipality, or State commission, or upon its own initiative without complaint, at once, and if it so orders, without answer or formal pleading by the natural-gas company, but upon reasonable notice, to enter upon a hearing concerning the lawfulness of such rate, charge, classification, or service; and, pending such hearing and the decision thereon, the Commission, upon filing with such schedules and delivering to the natural-gas company affected thereby a statement in writing of its reasons for such suspension, may suspend the operation of such schedule and defer the use of such rate, charge, classification, or service, but not for a longer period than five months beyond the time when it would otherwise go into effect: *Provided*, That the Commission shall not have authority to suspend the rate, charge, classification, or service for the sale of natural gas for resale for industrial use only; and after full hearings, either completed before or after the

rate, charge, classification, or service goes into effect; the Commission may make such orders with reference thereto as would be proper in a proceeding initiated after it had become effective. If the proceeding has not been concluded and an order made at the expiration of the suspension period, on motion of the natural-gas company making the filing, the proposed change of rate, charge, classification, or service shall go into effect. Where increased rates or charges are thus made effective, the Commission may, by order, require the natural-gas company to furnish a bond, to be approved by the Commission, to refund any amounts ordered by the Commission, to keep accurate accounts in detail of all amounts received by reason of such increase, specifying by whom and in whose behalf such amounts were paid, and upon completion of the hearing and decision, to order such natural-gas company to refund, with interest, the portion of such increased rates or charges by its decision found not justified. At any hearing involving a rate or charge sought to be increased, the burden of proof to show that the increased rate or charge is just and reasonable shall be upon the natural-gas company, and the Commission shall give to the hearing and decision of such questions preference over other questions pending before it and decide the same as speedily as possible.

SEC. 5. (a) Whenever the Commission, after a hearing had upon its own motion or upon complaint of any State, municipality, State commission, or gas distributing company, shall find that any rate, charge, or classification demanded, observed, charged, or collected by any natural-gas company in

connection with any transportation or sale of natural gas, subject to the jurisdiction of the Commission, or that any rule, regulation, practice, or contract affecting such rate, charge, or classification is unjust, unreasonable, unduly discriminatory, or preferential, the Commission shall determine the just and reasonable rate, charge, classification, rule, regulation, practice, or contract to be thereafter observed and in force, and shall fix the same by order: *Provided, however*, That the Commission shall have no power to order any increase in any rate contained in the currently effective schedule of such natural gas company on file with the Commission, unless such increase is in accordance with a new schedule filed by such natural gas company; but the Commission may order a decrease where existing rates are unjust, unduly discriminatory, preferential, otherwise unlawful, or are not the lowest reasonable rates.

(b) The Commission upon its own motion, or upon the request of any State commission, whenever it can do so without prejudice to the efficient and proper conduct of its affairs, may investigate and determine the cost of the production or transportation of natural gas by a natural-gas company in cases where the Commission has no authority to establish a rate governing the transportation or sale of such natural gas.

SEC. 6. (a) The Commission may investigate and ascertain the actual legitimate cost of the property of every natural-gas company, the depreciation therein, and, when found necessary for rate-making purposes, other facts which bear on the determination of such cost or depreciation and the fair value of such property.

(b) Every natural-gas company upon request shall file with the Commission an inventory of all or any part of its property and a statement of the original cost thereof, and shall keep the Commission informed regarding the cost of all additions, betterments, extensions, and new construction.

SEC. 7. (c) No natural-gas company or person which will be a natural-gas company upon completion of any proposed construction or extension shall engage in the transportation or sale of natural gas, subject to the jurisdiction of the Commission, or undertake the construction or extension of any facilities therefore, or acquire or operate any such facilities or extensions thereof, unless there is in force with respect to such natural-gas company a certificate of public convenience and necessity issued by the Commission authorizing such acts or operations: *Provided, however,* That if any such natural-gas company or predecessor in interest was bona fide engaged in transportation or sale of natural gas, subject to the jurisdiction of the Commission, on the effective date of this amendatory Act, over the route or routes or within the area for which application is made and has so operated since that time, the Commission shall issue such certificate without requiring further proof that public convenience and necessity will be served by such operation, and without further proceedings, if application for such certificate is made to the Commission within ninety days after the effective date of this amendatory Act. Pending the determination of any such application, the continuance of such operation shall be lawful.

In all other cases the Commission shall set the matter for hearing and shall give such reasonable notice of the hearing thereon to all interested persons as in its judgment may be necessary under rules and regulations to be prescribed by the Commission; and the application shall be decided in accordance with the procedure provided in subsection (e) of this section and such certificate shall be issued or denied accordingly: *Provided, however,* That the Commission may issue a temporary certificate in cases of emergency, to assure maintenance of adequate service or to serve particular customers, without notice or hearing, pending the determination of an application for a certificate, and may by regulation exempt from the requirements of this section temporary acts or operations for which the issuance of a certificate will not be required in the public interest.

(e) Except in the cases governed by the provisos contained in subsection (c) of this section, a certificate shall be issued to any qualified applicant therefore, authorizing the whole or any part of the operation, sale, service, construction, extension, or acquisition covered by the application, if it is found that the applicant is able and willing properly to do the acts and to perform the service proposed and to conform to the provisions of the Act and the requirements, rules, and regulations of the Commission thereunder, and that the proposed service, sale, operation, construction, extension, or acquisition, to the extent authorized by the certificate, is or will be required by the present or future public convenience and necessity; otherwise such application shall be denied. The Commission shall have the

power to attach to the issuance of the certificate and to the exercise of the rights granted thereunder such reasonable terms and conditions as the public convenience and necessity may require.

(f) The Commission, after a hearing had upon its own motion or upon application, may determine the service area to which each authorization under this section is to be limited. Within such service area as determined by the Commission a natural-gas company may enlarge or extend its facilities for the purpose of supplying increased market demands in such service area without further authorization.

(g) Nothing contained in this section shall be construed as a limitation upon the power of the Commission to grant certificates of public convenience and necessity for service of an area already being served by another natural-gas company.

SEC. 8. (a) Every natural-gas company shall make, keep, and preserve for such periods, such accounts, records of cost-accounting procedures, correspondence, memoranda, papers, books, and other records as the Commission may by rules and regulations prescribe as necessary or appropriate for purposes of the administration of this act: *Provided, however*, That nothing in this act shall relieve any such natural-gas company from keeping any accounts, memoranda, or records which such natural-gas company may be required to keep by or under authority of the laws of any State. The Commission may prescribe a system of accounts to be kept by such natural-gas companies, and may classify such natural-gas companies and prescribe a system of accounts for each class. The Commission,

after notice and opportunity for hearing, may determine by order the accounts in which particular outlays or receipts shall be entered, charged, or credited. The burden of proof to justify every accounting entry questioned by the Commission shall be on the person making, authorizing, or requiring such entry, and the Commission may suspend a charge or credit pending submission of satisfactory proof in support thereof.

(b) The Commission shall at all times have access to and the right to inspect and examine all accounts, records, and memoranda of natural-gas companies; and it shall be the duty of such natural-gas companies to furnish to the Commission, within such reasonable time as the Commission may order, any information with respect thereto which the Commission may by order require, including copies of maps, contracts, reports of engineers, and other data, records, and papers, and to grant to all agents of the Commission free access to its property and its accounts, records, and memoranda when requested so to do. No member, officer, or employee of the Commission shall divulge any fact or information which may come to his knowledge during the course of examination of books, records, data, or accounts, except insofar as he may be directed by the Commission or by a court.

(c) The books, accounts, memoranda, and records of any person who controls directly or indirectly a natural-gas company subject to the jurisdiction of the Commission and of any other company controlled by such person, insofar as they relate to transactions with or the business of such natural-gas company, shall be subject to ex-

amination on the order of the Commission.

SEC. 9. (a) The Commission may, after hearing, require natural-gas companies to carry proper and adequate depreciation and amortization accounts in accordance with such rules, regulations, and forms of account as the Commission may prescribe. The Commission may from time to time ascertain and determine, and by order fix, the proper and adequate rates of depreciation and amortization of the several classes of property of each natural-gas company used of useful in the production, transportation, or sale of natural gas. Each natural-gas company shall conform its depreciation and amortization accounts to the rates ascertained, determined, and fixed. No natural-gas company subject to the jurisdiction of the Commission shall charge to operating expenses any depreciation or amortization charges on classes of property other than those prescribed by the Commission, or charge with respect to any class of property a percentage of depreciation or amortization other than that prescribed therefor by the Commission. No such natural-gas company shall in any case include in any form under its operating or other expenses any depreciation, amortization, or other charge or expenditure included elsewhere as a depreciation or amortization charge or otherwise under its operating or other expenses. Nothing in this section shall limit the power of a State commission to determine in the exercise of its jurisdiction, with respect to any natural-gas company, the percentage rates of depreciation or amortization to be allowed, as to any class of property of such natural-gas company, or the composite depreciation or

amortization rate, for the purpose of determining rates or charges.

(b) The Commission, before prescribing any rules or requirements as to accounts, records, or memoranda, or as to depreciation or amortization rates, shall notify each State commission having jurisdiction with respect to any natural-gas company involved and shall give reasonable opportunity to each such commission to present its views and shall receive and consider such views and recommendations.

SEC. 10. (a) Every natural-gas company shall file with the Commission such annual and other periodic or special reports as the Commission may by rules and regulations or order prescribe as necessary or appropriate to assist the Commission in the proper administration of this act. The Commission may prescribe the manner and form in which such reports shall be made, and require from such natural-gas companies specific answers to all questions upon which the Commission may need information. The Commission may require that such reports shall include, among other things, full information as to assets and liabilities, capitalization, investment and reduction thereof, gross receipts, interest due and paid, depreciation, amortization, and other reserves, cost of facilities, cost of maintenance and operation of facilities for the production, transportation, or sale of natural gas, cost of renewal and replacement of such facilities, transportation, delivery, use, and sale of natural gas. The Commission may require any such natural-gas company to make adequate provision for currently determining such costs and other facts. Such reports shall be made

under oath unless the Commission otherwise specifies.

(b) It shall be unlawful for any natural-gas company willfully to hinder, delay, or obstruct the making, filing, or keeping of any information, document, report, memorandum, record, or account required to be made, filed, or kept under this act or any rule, regulation, or order thereunder.

SEC. 11. (a) In case two or more States propose to the Congress compacts dealing with the conservation, production, transportation, or distribution of natural gas it shall be the duty of the Commission to assemble pertinent information relative to the matters covered in any such proposed compact, to make public and to report to the Congress information so obtained, together with such recommendations for further legislation as may appear to be appropriate or necessary to carry out the purposes of such proposed compact and to aid in the conservation of natural-gas resources within the United States and in the orderly, equitable, and economic reduction, transportation, and distribution of natural gas.

(b) It shall be the duty of the Commission to assemble and keep current pertinent information relative to the effect and operation of any compact betwen two or more States heretofore or hereafter approved by the Congress, to make such information public, and to report to the Congress, from time to time, the information so obtained, together with such recommendations as may appear to be appropriate or necessary to promote the purposes of such compact.

SEC. 14. (b) The Commission may, after hearing, determine the adequacy or inadequacy of the gas reserves held or controlled

by any natural-gas company, or by anyone on its behalf, including its owned or leased properties or royalty contracts; and may also, after hearing, determine the property and reasonableness of the inclusion in operating expenses, capital, or surplus of all delay rentals or other forms of rentals or compensation for unoperated lands and leases. For the purpose of such determinations, the Commission may require any natural-gas company to file with the Commission true copies of all its lease and royalty agreements with respect to such gas reserves.

SEC. 16. The Commission shall have power to perform any and all acts, and to prescribe, issue, make, amend, and rescind such orders, rules, and regulations as it may find necessary or appropriate to carry out the provisions of this act. Among other things, such rules and regulations may define accounting, technical, and trade terms used in this act; and may prescribe the form or forms of all statements, declarations, applications, and reports to be filed with the Commission, the information which they shall contain, and the time within which they shall be filed. Unless a different date is specified therein, rules and regulations of the Commission shall be effective thirty days after publication in the manner which the Commission shall prescribe. Orders of the Commission shall be effective on the date and in the manner which the Commission shall prescribe. For the purposes of its rules and regulations, the Commission may classify persons and matters within its jurisdiction and prescribe different requirements for different classes of persons or matters. All rules

and regulations of the Commission shall be filed with its secretary and shall be kept open in convenient form for public inspection and examination during reasonable business hours.

SEC. 19. (a) Any person, State, municipality, or State commission aggrieved by an order issued by the Commission in a proceeding under this act to which such person, State, municipality, or State commission is a party may apply for a rehearing within thirty days after the issuance of such order. The application for rehearing shall set forth specifically the ground or grounds upon which such application is based. Upon such application the Commission shall have power to grant or deny rehearing or to abrogate or modify its order without further hearing. Unless the Commission acts upon the application for rehearing within thirty days after it is filed, such application may be deemed to have been denied. No proceeding to review any order of the Commission shall be brought by any person unless such person shall have made application to the Commission for a rehearing thereon.

(b) Any party to a proceeding under this act aggrieved by an order issued by the Commission in such proceeding may obtain a review of such order in the circuit court of appeals of the United States for any circuit wherein the natural-gas company to which the order relates is located or has its principal place of business, or in the United States Court of Appeals for the District of Columbia, by filing in such court, within sixty days after the order of the Commission upon the application for rehearing, a written petition praying that the order of

the Commission be modified or set aside in whole or in part. A copy of such petition shall forthwith be served upon any member of the Commission and thereupon the Commission shall certify and file with the court a transcript of the record upon which the order complained of was entered. Upon the filing of such transcript such court shall have exclusive jurisdiction to affirm, modify, or set aside such order in whole or in part. No objection to the order of the Commission shall be considered by the court unless such objection shall have been urged before the Commission in the application for rehearing unless there is reasonable ground for failure so to do. The finding of the Commission as to the facts, if supported by substantial evidence, shall be conclusive. If any party shall apply to the court for leave to adduce additional evidence, and shall show to the satisfaction of the court that such additional evidence is material and that there were reasonable grounds for failure to adduce such evidence in the proceedings before the Commission, the court may order such additional evidence to be taken before the Commission and to be adduced upon the hearing in such manner and upon such terms and conditions as to the court may seem proper. The Commission may modify its findings as to the facts by reason of the additional evidence so taken, and it shall file with the court such modified or new findings, which if supported by substantial evidence, shall be conclusive, and its recommendation, if any, for the modification or setting aside of the original order. The judgment and decree of the court, affirming, modifying, or setting aside, in whole or in part, any such order of the

Commission, shall be final, subject to review by the Supreme Court of the United States upon certiorari or certification as provided in sections 239 and 240 of the Judicial Code, as amended (U. S. C., title 28, secs. 346 and 347).

(c) The filing of an application for rehearing under subsection (a) shall not, unless specifically ordered by the Commission, operate as a stay of the Commission's order. The commencement of proceedings under subsection (b) of this section shall not, unless specifically ordered by the court, operate as a stay of the Commission's order.

Opinions Below 2

Jurisdiction 2

Statute Involved 3

Question Presented 4

Statement 5

Argument:

The United States Circuit Court of Appeals for the Eighth Circuit Was Without Jurisdiction Over the Subject Matter of the Controversy 11

I. Congress Has Authorized the Eighth Circuit to Review Orders of the Federal Power Commission Under the Natural Gas Act Only Upon Condition, and Absent the Condition Stipulated by Congress, the Eighth Circuit was Without Jurisdiction Over the Subject Matter 11

II. The Eighth Circuit was Without Jurisdiction Over the Subject Matter for the Reason that Petitioners Did Not Satisfy the Sole Condition Upon Which Congress Consented to Suit Against the United States in the Eighth Circuit 13

A. None of the three natural gas companies to which the Federal Power Commission's order relates had its "principal place of business" within the Eighth Circuit 13

B. Even if but one of the three natural gas companies to which the Federal Power Commission's order relates did not have its "principal place of business" within the Eighth Circuit, the Eighth Circuit did not have jurisdiction over the subject matter 16

Summary of Argument 17

Conclusion 19

PANHANDLE EASTERN PIPE LINE COMPANY,
ILLINOIS NATURAL GAS COMPANY, and
MICHIGAN GAS TRANSMISSION CORPORATION,
Petitioners,

vs.

FEDERAL POWER COMMISSION,
CITY OF DETROIT,
COUNTY OF WAYNE, MICH.,
MICHIGAN CONSOLIDATED GAS COMPANY, and
MICHIGAN PUBLIC SERVICE COMMISSION,
Respondents.

ON PETITION FOR A WRIT OF CERTIORARI TO THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE EIGHTH CIRCUIT.

BRIEF OF THE CITY OF CLEVELAND, OHIO, AMICUS CURIAE, SUGGESTING THAT THE COURT BELOW WAS WITHOUT JURISDICTION OVER THE SUBJECT MATTER.

This brief of the City of Cleveland,[1] a political subdivision of the State of Ohio, suggesting that the court below was without jurisdiction over the subject matter of

[1] The City of Cleveland, Ohio, is the largest city served by The East Ohio Gas Company, which, since January 1, 1944, has been and is the second largest customer of the Panhandle Eastern Pipe Line Company. Cleveland, like all the State and local parties representing the interests of ultimate consumers in this case, is in the Sixth Circuit.

the petition for review, is presented amicus curiae, without consent of the parties, under Rule 27, paragraph 9, of the Rules of the Supreme Court (306 U. S. 708-709).

The City of Cleveland respectfully suggests that the questions upon the merits which the petition for a writ of certiorari seeks to raise are not presented for review by the Supreme Court of the United States for the reason that the United States Circuit Court of Appeals for the Eighth Circuit was without jurisdiction over the subject matter of the controversy.

This Court will investigate and determine on its own motion whether the United States Circuit Court of Appeals for the Eighth Circuit had jurisdiction over the subject matter, even though that question was not raised by counsel for any of the parties in the court below, and this Court will not review on certiorari or otherwise the merits of a controversy over which the lower court was without jurisdiction. *Shanferoke Corporation v. Westchester Corporation*, 293 U. S. 449, 451; *Stratton v. St. Louis-Southwestern Railway Company*, 282 U. S. 10, 18; *M. C. and L. M. Railway Company v. Swan*, 111 U. S. 379, 382-384.

OPINIONS BELOW.

The opinion of the United States Circuit Court of Appeals for the Eighth Circuit (R. XVI, 7198) filed June 6, 1944, is now officially reported in 143 F. (2d) 488. The opinion of the Federal Power Commission entered September 23, 1942 (R. I, 14) is reported in 45 P. U. R. (N. S.) 203.

JURISDICTION.

Jurisdiction of this Court is invoked by the petitioners under Section 240(a) of the Judicial Code, as amended by the Act of February 13, 1925, and Section 19(b) of the Natural Gas Act. (Pet. for Cert., p. 2.)

Application for rehearing was denied by the Federal Power Commission on October 30, 1942. (R. XVI, 7150.)

The petition for review was filed with the United States Circuit Court of Appeals for the Eighth Circuit on the 18th day of November, 1942. (R. I, 44.)

The decree of the United States Circuit Court of Appeals for the Eighth Circuit was entered on June 6, 1944. (R. XVI, 7226.)

The Petition for Certiorari alleges that the United States Circuit Court of Appeals for the Eighth Circuit was the jurisdiction in which "petitioners had their principal place of business." (Pet. for Cert., p. 3.)

The Petition for Review filed with the Circuit Court of Appeals for the Eighth Circuit alleged that, "each of petitioners has its principal place of business in Kansas City, Jackson County, Missouri within the jurisdiction of the Eighth Circuit Court of Appeals." (R. I, 6.)

Said allegation of the Petition for Review is contradicted by the record, which shows upon its face that none of the petitioners had its "principal place of business" within the jurisdiction of the United States Circuit Court of Appeals for the Eighth Circuit.

STATUTE INVOLVED.

The statute involved is the Natural Gas Act (52 Stat. 821; 15 U. S. C. 717), and particularly Section 19(b) thereof, which provides:

> "(b) *Any party to a proceeding under this chapter aggrieved by an order issued by the Commission in such proceeding may obtain a review of such order in the circuit court of appeals of the United States for any circuit wherein the natural-gas company to which the order relates is located or has its principal place of business, or in the United States Court of Appeals for the District of Columbia*, by filing in such court, within sixty days after the order of the Commission upon the application for rehearing, a written petition praying that the order of the Commission be modified or set aside in whole or in part. A copy of such petition shall forthwith be served upon any member of the

Commission and thereupon the Commission shall certify and file with the court a transcript of the record upon which the order complained of was entered. Upon the filing of such transcript such court shall have exclusive jurisdiction to affirm, modify, or set aside such order in whole or in part. No objection to the order of the Commission shall be considered by the court unless such objection shall have been urged before the Commission in the application for rehearing unless there is reasonable ground for failure so to do. The finding of the Commission as to the facts, if supported by substantial evidence, shall be conclusive. If any party shall apply to the court for leave to adduce additional evidence, and shall show to the satisfaction of the court that such additional evidence is material and that there were reasonable grounds for failure to adduce such evidence in the proceedings before the Commission, the court may order such additional evidence to be taken before the Commission and to be adduced upon the hearing, in such manner and upon such terms and conditions as to the court may seem proper. The Commission may modify its findings as to the facts by reason of the additional evidence so taken, and it shall file with the court such modified or new findings, which if supported by substantial evidence, shall be conclusive, and its recommendation, if any, for the modification or setting aside of the original order. The judgment and decree of the court, affirming, modifying, or setting aside, in whole or in part, any such order of the Commission, shall be final, subject to review by the Supreme Court of the United States upon certiorari or certification as provided in sections 346 and 347 of Title 28, as amended." (15 U. S. C. A. 717r(b).)

QUESTION PRESENTED.

The primary question presented is whether the United States Circuit Court of Appeals for the Eighth Circuit had jurisdiction over the subject matter of the Petition for Review.

STATEMENT.

The order issued by the Federal Power Commission in this proceeding relates to three natural gas companies, namely, Illinois Natural Gas Company, Michigan Gas Transmission Corporation, and Panhandle Eastern Pipe Line Company. (R. I, 38, 42.) The Commission found that each of said corporations is a "natural gas company" within the purview of the Natural Gas Act. (R. I, 38-40.) The Natural Gas Act defines a "natural gas company" as "a person engaged in the transportation of natural gas in interstate commerce, or the sale in interstate commerce of such gas for resale." (Natural Gas Act, Sec. 2, par. (6).) The Commission did *not* find that all of said corporations together constitute a single "natural gas company" within the meaning of the Natural Gas Act.

Panhandle Eastern owned all the stock of both Michigan Gas and Illinois Natural. (R. I, 18, 40.) For rate-making purposes, the parties agreed that the corporate entities might be disregarded. (R. I, 18.) But for jurisdictional purposes, both the Federal Power Commission and the petitioners treated Illinois Natural, Michigan Gas and Panhandle Eastern as separate corporate entities, each owning its own lines and each operating its own lines. (R. I, 6, 17, 38-40, 42.) The Commission made its order against three natural gas companies. And the petition for review was filed on behalf of three natural gas companies. Each of petitioners had its own contracts with customers and each of petitioners had its own rate schedules on file with the Federal Power Commission under the Natural Gas Act. (R. IX, 4306, 4307-4309.) After the acquisition of all the stock of Michigan Gas by Panhandle Eastern, Commission counsel stated on the record (C. C. A. 8, typewritten transcript, p. 7988; omitted from printed record, R. VI, 2833):

> "Michigan Gas Transmission Corporation was a corporate entity before and is a corporate entity after this sale of its securities to Panhandle Eastern. It is

still Michigan Gas Transmission Corporation. It still owns and operates this line. The mere fact that its common stock has changed from the hands of one holding company to the hands of another company is wholly immaterial so far as Michigan Gas Transmission is concerned * * *. This is not a merger, this is not a consolidation, we are still dealing with Michigan Gas Transmission at the same old stand, they still own the lines and they still operate the lines."

The record does not show any acquisition by Panhandle Eastern of the properties of Michigan Gas or Illinois Natural. Nor does the record show any merger or consolidation of Panhandle Eastern, Illinois Natural, and Michigan Gas. There was no such acquisition of properties, consolidation or merger, at the time the petition for review was filed in the court below. Nor was there any such acquisition of properties, consolidation or merger within sixty days after the Federal Power Commission's denial of petitioners' application for rehearing. If there was any such acquisition of properties, merger, or consolidation, as the petition for certiorari goes outside the record to assert (Pet. for Cert., p. 4, note 1), it took place some time in 1943, and is immaterial for jurisdictional purposes.

The Petition for Review invoked the jurisdiction of the United States Circuit Court of Appeals for the Eighth Circuit solely under the clause of Section 19(b) of the Natural Gas Act which conditions jurisdiction upon that being the "circuit wherein the natural gas company to which the order relates * * * has its principal place of business." (R. I, 6.)

Petitioners did not claim that the Eighth Circuit was a circuit "wherein the natural gas company to which the order relates is located," nor could they have done so. The Petition for Review admits that Illinois Natural is an Illinois corporation, that Michigan Gas is a Delaware corporation, and that Panhandle Eastern is a Delaware corporation. (R. I, 6.) Illinois Natural was therefore located in

the Seventh Circuit and Michigan Gas and Panhandle Eastern were therefore located in the Third Circuit. The Eighth Circuit is not a circuit "wherein the natural gas company to which the order relates is located." *Colorado Interstate Gas Company v. Federal Power Commission*, 142 F. (2d) 943, 950 (C. C. A. 10).

The Petition for Review merely alleged that "each of petitioners has its principal place of business in Kansas City, Jackson County, Missouri, within the jurisdiction of the Eighth Circuit Court of Appeals." (R. I, 6.)

The allegation of the Petition for Review that "each of petitioners has its principal place of business in Kansas City, Jackson County, Missouri, within the jurisdiction of the Eighth Circuit Court of Appeals" is contradicted by the record.

In fact, the record shows that none of the natural gas companies to which the Federal Power Commission's order relates had its "principal place of business" within the jurisdiction of the United States Circuit Court of Appeals for the Eighth Circuit.

The allegation of the Petition for Review that Illinois Natural Gas Company,[1] one of the natural gas companies to which the Federal Power Commission's order relates, "has its principal place of business in Kansas City, Jackson County, Missouri, within the jurisdiction of the Eighth Circuit Court of Appeals" is contradicted by the record. The Petition for Review alleged and the Commission found that Illinois Natural was a "natural gas company." (R. I, 6, 40.) The Commission found that Illinois Natural was engaged in the sale in interstate commerce of natural gas transported in interstate commerce. (R. I, 39.) The record shows that the situs of the operations of Illinois

[1] This is the same Illinois Natural Gas Company which was recently a party to a case before this Court, *Illinois Natural Gas Company v. Central Illinois Public Service Company*, 314 U. S. 498 (1942).

Natural was wholly within the State of Illinois, which is in the Seventh Circuit. (R. XVI, 7089.) Illinois Natural owned 261 miles of pipe lines located wholly within the State of Illinois in the Seventh Circuit. (R. I, 18, 124; R. IX, 4101.) Illinois Natural was engaged in the business of selling natural gas in interstate commerce for resale solely to customers within the State of Illinois in the Seventh Circuit. (R. XIII, 5885; R. IX, 4095.) Illinois Natural transported natural gas in interstate commerce solely through said 261 miles of pipe lines located wholly within the State of Illinois in the Seventh Circuit. (R. I, 18.) Illinois Natural had no physical properties within the Eighth Circuit, transported no natural gas within the Eighth Circuit, sold no natural gas within the Eighth Circuit, had no natural gas customers within the Eighth Circuit, received no revenues from sales of natural gas within the Eighth Circuit. Even if the petition for review be construed as alleging that Illinois Natural had its principal executive office at Kansas City, Missouri, in the Eighth Circuit, the record plainly contradicts the allegation of the petition for review that Illinois Natural had its "principal place of business" in the Eighth Circuit.

The allegation of the petition for review that Michigan Gas Transmission Corporation, one of the natural gas companies to which the Federal Power Commission's order relates, "has its principal place of business in Kansas City, Jackson County, Missouri, within the jurisdiction of the Eighth Circuit Court of Appeals" is contradicted by the record. The petition for review alleged and the Commission found that Michigan Gas was a "natural gas company." (R. I, 6, 39.) The record shows that the situs of the operation of Michigan gas was partly within the State of Indiana, which is in the Seventh Circuit and partly within the states of Michigan and Ohio, which are in the Sixth Circuit. (R. XIII, 5885; R. X, 4757, *et seq.*) Michigan Gas owned approximately 496 miles of pipe lines located partly

within the State of Indiana, which is in the Seventh Circuit, and partly within the States of Michigan and Ohio, which are in the Sixth Circuit. (R. I, 39; R. XIII, 5885; R. X, 4757-4761.) Michigan Gas was engaged in the business of selling natural gas in interstate commerce transported in interstate commerce to various customers in Indiana, and in transporting natural gas in interstate commerce wholly within the states of Ohio, Indiana and Michigan for the account of Panhandle Eastern to various distributing companies which served forty communities in Ohio and Michigan, including the City of Detroit. (R. X, 4757.) Michigan Gas had no physical properties within the Eighth Circuit; transported no natural gas within the Eighth Circuit, sold no natural gas to customers within the Eighth Circuit, received no revenues from sales of natural gas within the Eighth Circuit. Michigan Gas had offices in Detroit, Michigan. (R. II, 579.) Even if the petition for review be construed as alleging that Michigan Gas had its principal executive office at Kansas City, Missouri, in the Eighth Circuit, the record plainly contradicts the allegation of the petition for review that Illinois Natural had its "principal place of business" in the Eighth Circuit.

The allegation of the petition for review that Panhandle Eastern Pipe Line Company, one of the natural gas companies to which the Federal Power Commission's order relates, "has its principal place of business in Kansas City, Jackson County, Missouri, within the jurisdiction of the Eighth Circuit Court of Appeals" is contradicted by the record. The petition for review alleged and the Commission found that Panhandle Eastern is a "natural gas company" within the meaning of the Natural Gas Act. (R. I, 6, 38.) The record shows that Panhandle Eastern owned producing wells in Texas in the Fifth Circuit and Kansas in the Tenth Circuit (R. I, 105), owned a main transmission line beginning in Texas in the Fifth Circuit, crossing Oklahoma and Kansas in the Tenth Circuit, Mis-

souri in the Eighth Circuit, Illinois in the Seventh Circuit, and ending at Dana, Indiana, in the Seventh Circuit. (R. I, 39; R. XIII, 5885.) Panhandle Eastern was engaged in the business of selling in interstate commerce natural gas transported in interstate commerce. (R. I, 18, 39.) Michigan Gas and Illinois Natural purchased the entire supplies of gas which they respectively transported and sold from Panhandle Eastern. (R. I, 18; R. X, 4757.) The record shows that in 1941 Panhandle Eastern delivered into the Seventh Circuit to Michigan Gas and Illinois Natural over 80 per cent of the gas which it sold (R. XI, 5059), and that the sales of Panhandle Eastern were principally in the Sixth and Seventh Circuits, the Michigan Consolidated Gas Company, which serves the city of Detroit in the Sixth Circuit being by far its largest customer. (R. XI, 5059, 5057.) The record shows that in 1941 Panhandle Eastern delivered only about 15 per cent of the gas which it sold into the State of Missouri in the Eighth Circuit. (R. XI, 5059.) Panhandle Eastern had no large customer for resale in the Eighth Circuit. (R. IX, 4091.) The record shows that in 1941, Panhandle Eastern received nearly all of its gas revenues from sales in the Sixth and Seventh Circuits and only a minor and incidental percentage from the Eighth Circuit. (R. XII, 5461.) Panhandle Eastern had two offices which it called "principal executive offices," one at 90 Broad Street, New York, New York, in the Second Circuit, and one at 1221 Baltimore Avenue, Kansas City, Missouri, in the Eighth Circuit. (R. XI, 5051.) Even if the petition for review be construed as alleging that Panhandle Eastern had its principal executive office at Kansas City, Missouri, in the Eighth Circuit, the record plainly contradicts the allegation of the petition for review that Panhandle Eastern had its principal place of business in the Eighth Circuit.

Upon these facts, the City of Cleveland suggests that the United States Circuit Court of Appeals for the Eighth Circuit was without jurisdiction over the subject matter.

ARGUMENT.

THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE EIGHTH CIRCUIT WAS WITHOUT JURISDICTION OVER THE SUBJECT MATTER OF THE CONTROVERSY.

I.

CONGRESS HAS AUTHORIZED THE EIGHTH CIRCUIT TO REVIEW ORDERS OF THE FEDERAL POWER COMMISSION UNDER THE NATURAL GAS ACT ONLY UPON CONDITION, AND ABSENT THE CONDITION STIPULATED BY CONGRESS, THE EIGHTH CIRCUIT WAS WITHOUT JURISDICTION OVER THE SUBJECT MATTER.

Congress has authorized the Eighth Circuit to review orders of the Federal Power Commission under the Natural Gas Act only upon condition.

The pertinent part of Section 19(b) of the Natural Gas Act (52 Stat. 831; 15 U. S. C. A. Sec. 717r(b) provides:

> "(b) Any party to a proceeding under this chapter aggrieved by an order issued by the Commission in such proceeding may obtain a review of such order in the circuit court of appeals of the United States for any circuit wherein the natural-gas company to which the order relates is located or has its principal place of business, or in the United States Court of Appeals for the District of Columbia, by filing in such court, within sixty days after the order of the Commission upon the application for rehearing, a written petition praying that the order of the Commission be modified or set aside in whole or in part * * *."

Congress obviously has not conferred general jurisdiction upon all circuit courts of appeals as a class to review Federal Power Commission orders under the Natural Gas Act. Nor has the Congress conferred jurisdiction upon the Eighth Circuit in particular to hear all reviews of this class.

On the contrary, the statute manifestly confers jurisdiction in particular to review all orders of the Federal Power Commission under the Natural Gas Act solely upon the United States Court of Appeals for the District of Columbia.

As to circuit courts of appeals, other than the United States Court of Appeals for the District of Columbia, Congress has conditioned the special grant of power to review orders of the Federal Power Commission under the Natural Gas Act upon the existence of one of two alternative circumstances.

Jurisdiction of the Eighth Circuit, for example, to review orders of the Federal Power Commission under the Natural Gas Act is expressly conditioned upon that circuit's being either (1) the "circuit wherein the natural-gas company to which the order relates is located" or (2) the "circuit wherein the natural-gas company to which the order relates * * * has its principal place of business."

In other words, Congress has conferred jurisdiction to hear and determine the controversy upon the Eighth Circuit only in a given set of circumstances.

If neither of the circumstances is present upon which this extraordinary grant of original jurisdiction to review orders of the Federal Power Commission under the Natural Gas Act is conditioned, the Eighth Circuit lacks jurisdiction over the subject matter. *In the Matter of the Petition of National Labor Relations Board*, 304 U. S. 486, 494.

A suit against the Federal Power Commission, an agency of the United States, is a suit against the United States, and courts may not go beyond the statutory letter of the consent to be sued or permit suit except in the courts and upon the terms permitted by the Congress: *Okin v. S. E. C.*, 46 F. Supp. 481, 482 (D. C., S. D. New York) (1942); *Schillinger v. U. S.*, 155 U. S. 163, 166; *S. E. C. v. Andrews*, 88 F. (2d) 441 (C. C. A. 2) (1937); *Illinois Cen-*

tral v. P. U. C., 245 U. S. 493, 504; *Kennedy v. P. W. A.*, 23 F. Supp. 771, 773 (D. C., N. D., New York) (1938).

A fortiori, in a suit against an agency of the United States, counsel for the federal agency can not by waiver or consent enlarge the consent of Congress so as to permit suit against the United States in other courts or upon other terms than those permitted by the Congress. *Finn v. U. S.*, 123 U. S. 227, 233; *Minnesota v. United States*, 305 U. S. 382, 388-389; *United States v. Shaw*, 309 U. S. 495, 501.

In this case, if the Eighth Circuit was not the "circuit wherein the natural-gas company to which the order relates * * * has its principal place of business," the Eighth Circuit was wholly without jurisdiction over the subject matter.

II.

THE EIGHTH CIRCUIT WAS WITHOUT JURISDICTION OVER THE SUBJECT MATTER FOR THE REASON THAT PETITIONERS DID NOT SATISFY THE SOLE CONDITION UPON WHICH CONGRESS CONSENTED TO SUIT AGAINST THE UNITED STATES IN THE EIGHTH CIRCUIT.

A. None of the three natural gas companies to which the Federal Power Commission's order relates had its "principal place of business" within the Eighth Circuit.

Congress has consented to suit against the United States within the Eighth Circuit in this case only if that is the "circuit wherein the natural-gas company to which the order relates * * * has its principal place of business." (Natural Gas Act, Sec. 19(b).).

In *Colorado Interstate Gas Company v. Federal Power Commission*, 142 F. (2d) 943, 951 (C. C. A. 10) (1944) (Bratton, Circuit Judge), the court construed this language of Section 19(b) as follows:

> "* * * No doubt mature considerations of convenience gave rise to the deliberate care with which Con-

gress, in the exercise of its discretion, authorized review in the circuit within which the principal business of the company is conducted. And the principal place of business is where the actual business of the corporation is conducted or transacted. It is a question of fact to be determined in each particular case by taking into consideration such factors as the character of the corporation, its purposes, the kind of business in which it is engaged, and the situs of its operations. Cf. *In re Guanacevi Tunnel Co.*, 2 Cir., 201 F. 316; *In re Hudson River Nav. Corp., supra; Chicago Bank of Commerce v. Carter*, 8 Cir., 61 F. 2d 986."

Was the Eighth Circuit the circuit wherein Illinois Natural Gas Company had its "principal place of business"? The business of Illinois Natural was the furnishing of gas to customers in the Seventh Circuit for ultimate public consumption in the Seventh Circuit. The pipe lines of Illinois Natural were located wholly within the Seventh Circuit. All the gas which Illinois Natural sold was delivered into the Seventh Circuit. All the revenues which Illinois Natural received came from the Seventh Circuit. Illinois Natural sold no gas in the Eighth Circuit for ultimate public consumption in the Eighth Circuit, had no pipe lines in the Eighth Circuit, transported no gas within the Eighth Circuit, and received no revenues from sales or transportation within the Eighth Circuit. The unsupported allegation of the petition for review filed in the Eighth Circuit that Illinois Nafural had its "principal place of business" in the Eighth Circuit is contradicted by the record.

Was the Eighth Circuit the circuit wherein Michigan Gas Transmission Corporation had its "principal place of business"? The business of Michigan Gas was the furnishing of natural gas to customers in the Sixth and Seventh Circuits for ultimate public consumption in the Sixth and Seventh Circuits. The pipe lines of Michigan Gas were located wholly within the Sixth and Seventh Circuits. All the gas transported and sold by Michigan Gas was trans-

ported and sold within the Sixth and Seventh Circuits. All the revenues which Michigan Gas received came from the Sixth and Seventh Circuits. Michigan Gas transported no gas in the Eighth Circuit, delivered no gas into the Eighth Circuit, sold no gas in the Eighth Circuit, received no revenues from the Eighth Circuit, had no pipe lines in the Eighth Circuit. Between the easternmost boundary of the Eighth Circuit at the Missouri line and the westernmost point to which the lines of Michigan Gas extended, lies the entire width of the State of Illinois. The unsupported allegation of the petition for review that Michigan Gas had its "principal place of business" in the Eighth Circuit is manifestly contradicted by the record.

Was the Eighth Circuit the circuit wherein Panhandle Eastern Pipe Line Company had its "principal place of business"? The principal business of Panhandle Eastern Pipe Line Company was the delivery of gas into the Seventh Circuit to Illinois Natural and Michigan Gas for ultimate public consumption in the Sixth and Seventh Circuits. Nearly all the gas which Panhandle Eastern sold was delivered into the Seventh Circuit. Nearly all the revenues which Panhandle Eastern received came from the Sixth and Seventh Circuits. Panhandle Eastern sold only minor and incidental quantities of gas in the Eighth Circuit for ultimate public consumption in the Eighth Circuit and received only a minor and incidental part of its revenues from gas furnished to customers within the Eighth Circuit. The unsupported allegation of the petition for review filed in the Eighth Circuit that Panhandle Eastern had its "principal place of business" in the Eighth Circuit is manifestly contradicted by the record.

The words "principal place of business" as used in the Natural Gas Act and other federal statutes relating to jurisdiction of the lower federal courts, do not mean "principal office" or "principal executive office." *Caceres v. United States Shipping Board Emergency Fleet Corporation*, 299 Fed. 968, 970-971; *Dryden v. Ranger Refining*

Company, 280 Fed. 257, 259, cert. den. 260 U. S. 726; *Roszell Bros. v. Continental Coal Corp.*, 235 Fed. 343, 356-357, aff'd. 242 Fed. 243, 246; *In re Tugarts River Coal Co.*, 203 Fed. 178, 179-180; *Watters v. Hamilton Gas Company*, 10 F. Supp. 323, 326; *Colorado Interstate Gas Company v. Federal Power Commission*, 142 F. (2d) 943, 951.

The allegation of the petition for review that "each of petitioners has its principal place of business in Kansas City, Jackson County, Missouri, within the jurisdiction of the Eighth Circuit Court of Appeals" is upon this record merely a mistaken conclusion. See *Toraway Hotel Company v. Smathers*, 216 U. S. 439, 448.

It is respectfully submitted that none of the three natural gas companies to which the Federal Power Commission's order relates had its "principal place of business" within the Eighth Circuit.

B. Even if but one of the three natural gas companies to which the Federal Power Commission's order relates did not have its "principal place of business" within the Eighth Circuit, the Eighth Circuit did not have jurisdiction over the subject matter.

Congress has consented to suits against the United States in the Eighth Circuit only if that is the "circuit wherein *the* natural gas company to which the order relates * * * has its principal place of business." (Natural Gas Act, Sec. 19(b).) Congress has not consented to suit against the United States in the circuit wherein *any* natural gas company to which the order relates has its principal place of business. Congress has not consented to suit against the United States in the Circuit wherein *some* of the natural gas companies to which the order relates have their principal places of business. If the Federal Power Commission's order relates to more than one natural gas company, Congress has consented to suit against the United States in a circuit other than the District of Columbia only if it is the circuit wherein each of the natural gas companies

to which the order relates is located or has its principal place of business. If a Federal Power Commission order relates to more than one natural gas company, and the natural gas companies to which the order relates have their principal places of business in different circuits and are located in different circuits, Congress has consented to suit against the United States only in the United States Court of Appeals for the District of Columbia.

Even if but one of the three natural gas companies to which the Federal Power Commission's order relates in this case did not have its "principal place of business" within the Eighth Circuit, the United States Court of Appeals for the District of Columbia had exclusive jurisdiction and the Eighth Circuit had no jurisdiction over the subject matter.

In short, Congress has authorized the Eighth Circuit to review orders of the Federal Power Commission under the Natural Gas Act only upon condition, and absent the condition stipulated by Congress, the Eighth Circuit was without jurisdiction over the subject matter. None of the three natural gas companies to which the Federal Power Commission's order relates had its "principal place of business" within the Eighth Circuit. Even if but one of the three natural gas companies to which the Federal Power Commission's order relates did not have its "principal place of business" within the Eighth Circuit, the Eighth Circuit did not have jurisdiction over the subject matter. The Eighth Circuit was without jurisdiction over the subject matter for the reason that petitioners did not satisfy the sole condition upon which Congress consented to suit against the United States in the Eighth Circuit.

SUMMARY OF ARGUMENT.

The United States Circuit Court of Appeals for the Eighth Circuit was without jurisdiction over the subject matter of the controversy.

The Federal Power Commission is an agency of the United States.

A statutory proceeding to review an order of the Federal Power Commission is a suit against the United States.

Congress has consented to suits against the United States under the Natural Gas Act only upon certain terms and conditions.

Courts may not go beyond the statutory letter of the consent to be sued, or permit suit against the United States except in the courts and upon the terms permitted by the Congress.

In a suit against an agency of the United States, counsel for the federal agency can not by his action or inaction enlarge the consent of Congress so as to permit suit against the United States in other courts or upon other terms than those permitted by the Congress.

Under the Natural Gas Act, Congress has unconditionally consented to suits against the United States only in the United States Court of Appeals for the District of Columbia.

Under the Natural Gas Act, Congress has conditionally consented to suits against the United States in other circuits only if the circuit is either (1) the "circuit wherein the natural-gas company to which the order relates is located" or (2) the "circuit wherein the natural-gas company to which the order relates * * * has its principal place of business."

Under the Natural Gas Act, where, as here, the Federal Power Commission's order relates to more than one natural gas company, suits against the United States may be brought in a circuit other than the District of Columbia only if it is the circuit wherein each of the natural-gas companies to which the order relates is located or has its principal place of business.

In the instant case, the Federal Power Commission's order relates to three natural gas companies.

In the instant case, none of the three natural-gas companies to which the Federal Power Commission's order relates was located in the Eighth Circuit.

In the instant case, if but one of the three natural-gas companies to which the Federal Power Commission's order relates did not have its principal place of business in the Eighth Circuit, jurisdiction of the Eighth Circuit is defeated.

In the instant case, none of the three natural-gas companies to which the Federal Power Commission's order relates had its principal place of business in the Eighth Circuit.

It is respectfully submitted that the United States Circuit Court of Appeals for the Eighth Circuit was without jurisdiction over the subject matter of the controversy.

CONCLUSION.

The City of Cleveland respectfully suggests that the questions upon the merits set up in the Petition for a Writ of Certiorari are not presented for review by the Supreme Court of the United States for the reason that the United States Circuit Court of Appeals for the Eighth Circuit was without jurisdiction over the subject matter of the controversy.

Respectfully submitted,

SPENCER W. REEDER,
Special Assistant Director of Law,
Cleveland, Ohio,
Counsel for the City of Cleveland,
Amicus Curiae.

THOMAS A. BURKE, JR.,
Director of Law,
Cleveland, Ohio,

JOSEPH H. CROWLEY,

No. 296

PANHANDLE EASTERN PIPE LINE COMPANY, ILLINOIS NATURAL GAS COMPANY, AND MICHIGAN GAS TRANSMISSION CORPORATION,

Petitioners,

vs.

FEDERAL POWER COMMISSION, CITY OF DETROIT, MICH., COUNTY OF WAYNE MICH., MICHIGAN CONSOLIDATED GAS COMPANY, AND MICHIGAN PUBLIC SERVICE COMMISSION.

ON PETITION FOR A WRIT OF CERTIORARI TO THE UNITED STATES CIRCUIT COURT OF APPEALS FOR THE EIGHTH CIRCUIT.

Motion of Petitioners for Enlargement of Time Under Rule 33 and Petition for Rehearing and for Enlargement of Scope of Review

To the Honorable the Chief Justice and the Associate Justices of the Supreme Court of the United States:

Petitioners heretofore filed their petition for a writ of certiorari herein, presenting four separate questions. By its order of November 13, 1944, this honorable Court granted said petition, limited to the third question presented by the petition, namely, the following question:

> (3) Whether the Commission's action in treating petitioners' business as an entirety and refusing to make any allocation or separation with respect to petitioners' regulated and unregulated sales was beyond its statutory power.

The first and second questions presented by petitioners' said petition for writ of certiorari read as follows:

> (1) Whether the refusal of the Commission to receive evidence of reproduction or replacement cost and evidence of the value of petitioners' producing properties amounted to a denial of due process.
>
> (2) Whether limiting the sale price of petitioners' gas for resale so as to provide an over-all return of 6½ per cent on the depreciated cost of petitioners' properties including those devoted to production and gathering of natural gas and excluding petitioners' tendered evidence as to the market value of petitioners' gas leaseholds constituted an exercise of jurisdiction over production and gathering of natural gas in violation of the Natural Gas Act.

Heretofore, Canadian River Gas Company filed its petition for a writ of certiorari in cause number 380, October term, 1944, pending in this Court, presenting nine separate questions. By its order of November 13, 1944, this Court granted said petition of Canadian River Gas Company, limited to the eighth question presented thereby, which eighth question is as follows:

> Whether the Commission can, consistently with the Fifth Amendment to the Constitution of the United States and the provisions of the Act, reduce the rates and charges of Canadian on that part of its natural gas sales to Colorado interstate which is not sold by the latter for ultimate distribution to the public but is sold by it directly to its industrial customers; furthermore, independent of the above question, whether the Commission erred in making no separation or allocation as between Canadian's properties devoted to intrastate sales in Texas and its properties devoted to interstate sales, or as between the properties of Canadian and the properties of Colorado Interstate, and in using in lieu thereof a substitute method of allocation of cost of service which results in burden-

ing non-regulable gas with costs actually chargeable against regulable gas, in violation of the Fifth Amendment to the Constitution of the United States and the Act.

Thereafter, Canadian River Gas Company filed in said cause number 380 its petition "for rehearing and for enlargement of scope of review". Petitioners are advised that on December 21, 1944, this honorable Court granted said petition and that on January 2, 1945, a formal order will be entered, enlarging the scope of review in said cause number 380 to include, in addition to the aforesaid eighth question, the following questions:

1. Whether the Circuit Court, after correctly holding that the Commission has no rate regulatory jurisdiction over Canadian's production and gathering properties, facilities and business, erroneously concluded and ruled that the Commission in this case did not exercise such prohibited jurisdiction.

2. Whether, even assuming, arguendo, that the Commission has rate regulatory jurisdiction over Canadian's production and gathering properties, facilities and business, the Commission can, consistently with the Fifth Amendment to the Constitution of the United States, the requirements of the Act, and the decisions of this Court in the Natural Gas Pipeline, Hope and other cases, limit Canadian generally to a return only on the "wildcat", or original cost of its gas leaseholds to predecessor companies prior to discovery and development over 20 years ago, to the exclusion of all evidence of value, market or otherwise, the result of this procedure being, among other things, the inclusion in the Commission's rate base of a substantial block of Canadian's most valuable leaseholds at zero valuation and a still larger block of valuable leaseholds at only 10¢ per acre valuation.

Petitioners respectfully show that the aforesaid questions 1 and 2 which this honorable Court, by enlarging

the scope of review therein, has consented to review in cause No. 380, present the same fundamental issue presented by petitioners herein by their aforesaid questions 1 and 2 set forth at page two of their petition for certiorari herein. Petitioners further show that the factual background upon which Canadian River Gas Company presents its questions 1 and 2 is similar in all essential respects to the factual background upon which petitioners herein present their questions 1 and 2.

Wherefore, petitioners respectfully move the Court to enlarge the time provided under Rule 33 of the rules of this Court for filing their petition for rehearing herein; and, if said motion is granted, petitioners respectfully petition this Court to grant a rehearing to the extent that its order of November 13, 1944, denies review of questions 1 and 2 set forth in their petition for a writ of certiorari and to enlarge the scope of the review to be had in this Court so as to include the questions 1 and 2, in addition to the question 3, set forth in their said petition for a writ of certiorari.

ARGUMENT IN SUPPORT OF MOTION.

In support of their motion, petitioners respectfully show:

Petitioners did not file their petition for rehearing and enlargement of the scope of review within the time limited by Rule number 33 of the rules of this Court because it appeared that such action would be futile in view of the fact that there were pending before this honorable Court petitions for writs of certiorari in causes number 379, 380, and 575, October term, 1944, and on November 13, 1944, this honorable Court entered an order in each case restricting the review, as in petitioners' case, to the sole question of the propriety of the action of the Federal Power Commission in dealing with sales of gas not subject to its rate making powers. The refusal of this honorable Court to review any other question in any of these cases convinced petitioners that the limitation upon the review in their case was not based upon facts peculiar to their situation but represented a determination reached upon a consideration of the four cases as a group.

Considering the cases as a group, it would appear that, if the scope of review is enlarged to include an additional question, such question should be reviewed in each of the cases where it is presented. Furthermore, it would seem that this honorable Court would desire to hear full argument on the question and, if relief is granted in one case, to grant the same relief in another case where it is shown to be appropriate. As we will show hereinafter, the same considerations which would impel the granting of relief to Canadian River Gas Company are present, with equal force, here.

ARGUMENT IN SUPPORT OF PETITION.

The fundamental issue presented by Canadian River Gas Company in its questions 1 and 2 (quoted supra page 3) and by petitioners in their questions 1 and 2 (quoted supra page 2) is the same.

That issue is whether the Federal Power Commission can, consistently with the Natural Gas Act and Article Five of the Amendments to the Constitution of the United States, restrict that part of the earnings of a natural-gas company derived from its properties used in production and gathering of gas to 6½ per cent on the depreciated original cost of such properties.

In supporting the negative of this proposition, petitioners urged that the Federal Power Commission could effectively exercise its rate making powers over interstate sales for resale, without regulating production and gathering, by either (a) separating the properties used for production and gathering from the rate base and establishing a fair commodity price in the field, or (b) including the production and gathering properties in the rate base at their fair value measured by the present market value. (Pages 21-22, petition for certiorari herein.)

Canadian River Gas Company took the same position in its petition for rehearing and enlargement of the scope of review (see pages 12, 13-14 of said petition).

The similarity of the two cases is striking in the following respects:

1. Both companies have large and valuable gas leaseholds and producing and gathering facilities. For the year 1941 petitioners produced approximately one-half of the total amount of gas transported and sold by them (Exs. 56 and 57, R. IX, 4284, 4285).

2. Both companies acquired their gas leaseholds in the "wildcat" period of development at prices far below their present values and by arm's-length bargaining.

3. With respect to each company, the Federal Power Commission treated the production and gathering properties, which are not subject to regulation, in exactly the same manner that it treated the properties used for interstate transportation and sale for resale, which are subject to regulation.

A comparison of the argument presented by Canadian River Gas Company in its petition for rehearing and enlargement of the scope of review with the argument presented by petitioners in their petition for a writ of certiorari discloses no basic difference.

Canadian River Gas Company said at pages 11-12 of its aforesaid petition:

> We submit it approaches absurdity to state that the Commission does not have rate regulatory jurisdiction over production and gathering and at the same time to rule that rate regulatory jurisdiction is not exercised where the Commission includes production and gathering properties in a rate base; where it applies its own formula of original cost or prudent investment to production and gathering properties; where it includes production and gathering expenses in its estimate of future expenses; where it allows working capital for the production and gathering business, and considers and determines what wells are to be drilled in the future; and finally, where, in determining an alleged excess revenue, it applies a 6½% rate of return not only to the transmission system properties but also to the production and gathering properties which constitute approximately two-thirds of the total rate base as determined by the Commission. Obviously the Commission has treated every element of Canadian's production and gathering properties, facilities and business in precisely the same

manner as its interstate transmission properties, facilities and business, and has subjected every element of Canadian's production and gathering facilities to the same rate regulatory measures and procedures as Canadian's interstate transmission properties, facilities and business for the purpose of arriving at its ultimate conclusions with respect to rates and charges. If the Act had expressly delegated full and complete rate regulatory jurisdiction over Canadian's producing and gathering properties, facilities and business, the Commission could have done no more than it has done in this case. The Circuit Court's opinion is inconsistent and contradictory. Its effect, not only in the instant case but also in all other cases, if allowed to stand, is to vest complete rate regulatory jurisdiction over production and gathering and thus to assume and exercise a legislative veto power over an express and unambiguous Act of Congress.

Petitioners said at pages 21-23 of their petition for a writ of certiorari:

Section 1(b) of the Act expressly provides that the provisions of the Act shall not apply to the production or gathering of natural gas. It is petitioners' contention that it was the statutory duty of the Commission to segregate petitioners' production and gathering properties and the revenues and expenses related thereto. An alternative approach, which seems to lead to the same result was the contention that, while the operations might all be included within the petitioners' rate accounting structure, the rate base valuations of leases and other assets relating solely to production and gathering must be consistent with their status as unregulated properties. The Commission, however, not only failed to segregate the production and gathering phase of petitioners' business but it actually included in the rate base all of petitioners' production and gathering facilities and gas leaseholds at their original cost depreciated, depleted and amortized. These leaseholds were carried on petitioners' books at only $955,096, although petitioners

were prepared to show, and offered to prove, that these leaseholds had a market value on June 1, 1941, of nearly $8,500,000 (Ex. 39, R. 4199, 4201, 492). Thus, in total disregard of the Congressional mandate, the Commission arrogated unto itself jurisdiction over an unregulated portion of petitioners' property and business as fully and completely as it exercised jurisdiction over petitioners' transportation facilities and business, which latter facilities and resale business are within the ambit of the Commission's statutory authority.

The order of the Commission is peculiarly subject to attack in these proceedings because, as noted, the Commission excluded evidence which was admissible in reaching a determination with respect to the value of the commodity in the fields where produced. The decision of the court below in affirming the action of the Commission is in conflict with applicable decisions of this Court.

While the Natural Gas Act excludes the production and gathering of gas from the Commission's jurisdiction and permits it to exercise jurisdiction only over the interstate transportation of gas and over certain (not all) sales thereof in interstate commerce, the Commission has by its order herein found that petitioners are entitled to a price in the field for their gas, predicated solely on a consideration of the original cost of their leaseholds less accruals for depletion and the application thereto of a 6½% rate of return. This it has done notwithstanding the fact that production and gathering of gas are expressly excluded from the application of the provisions of the Natural Gas Act.

It is obvious that, if petitioners' leaseholds can now be sold for more than $8,000,000, an allowance of an earning on only a value of less than $1,000,000 is wholly erroneous and arbitrary. It is to be assumed that the market value of the leaseholds is largely reflected in the market price, or the value of the gas, in the respective areas where it is produced. Such market price or field value is determined by many economic

conditions and field transactions having no relation to the original cost of the leaseholds.

The Commission in reaching into and regulating this phase of the petitioners' business clearly went beyond the scope of its authority.

CONCLUSION.

For the foregoing reasons, petitioners respectfully submit that their motion and petition herein should be granted and that the scope of review upon writ of certiorari should be enlarged to include questions 1 and 2 presented by their petition for a writ of certiorari.

Preliminary Statement 1

Grounds of Petition

I. **In the absence of basic and essential findings, the Court is unable to appraise the effect of the Commission's failure to allocate. Results not considered by the Court are obviously unfair** ... 4

II. **The "exceptional circumstances of this case" relied upon by the Court to sustain the Commission's failure to allocate are either inferences unsupported by the record or not exceptional in any sense. None of these so-called exceptional circumstances presents any obstacle to the application by the Commission in petitioner's case of the same method of allocation which it applied to Canadian River Gas Company, Colorado Interstate Gas Company and Colorado-Wyoming Gas Company** 11

(a) The circumstance that "a witness for petitioner testified at the hearing that under petitioner's allocation of costs the unregulated business has the use of facilities of the company without any charge" is an inference unsupported by the record 11

(b) The circumstance that "the company attempts no allocation in the conduct of its business. The business is operated as a unit" is not an exceptional circumstance, but a common practice in the natural gas industry 12

(c) The circumstance that one of petitioner's officers testified on cross-examination that "any attempt to allocate return, as between regulated business and unregulated business" is "unrealistic", "theoretical" and "not practical" is not exceptional when

PAGE

considered in the light of the circumstances under which he was testifying and the fact that such officer was not produced by petitioner to testify on allocation 13

(d) The statement of the Court that "none of the main transmission line operating and maintenance costs was charged to the direct industrial sales" is inaccurate 14

(e) The Court's statement that "all agreed that an allocation on the basis of investment or costs would be impractical" is an inference not supported by the record 14

(f) The Court's statement that "all agreed that the fair division was a matter of judgment not mathematics" is an inference not supported by the record 15

III. The Court has failed to consider the allocation submitted by the Commission's staff through a witness who was better informed than anyone else on the Commission's method of allocation 16

IV. The Court has failed to consider the fact that petitioner not only requested the Commission to make a segregation of property as between regulated and unregulated sales, but also requested (submitting detailed proposed findings) the Commission to make an allocation of costs; and that petitioner, in its application for rehearing, urged its objection to the Commission's failure to make such allocation 17

V. The holding of the Court that once the use of "a formula is waived or is conceded to be impractical or theoretical," the general effect of what the Commission did may be accepted as an allocation, without specific findings of any kind, is contrary to established principles of law consistently recognized and applied by this Court 21

SUPREME COURT OF THE UNITED STATES

OCTOBER TERM, 1944

NO. 296

PANHANDLE EASTERN PIPE LINE COMPANY, ILLINOIS NATURAL GAS COMPANY, AND MICHIGAN GAS TRANSMISSION CORPORATION,

Petitioners,

VS.

FEDERAL POWER COMMISSION, CITY OF DETROIT, MICH., COUNTY OF WAYNE, MICH., MICHIGAN CONSOLIDATED GAS COMPANY, AND MICHIGAN PUBLIC SERVICE COMMISSION.

On Writ of Certiorari to the United States Circuit Court of Appeals for the Eighth Circuit.

PETITION FOR REHEARING AND STAY OF MANDATE.

To the Honorable the Chief Justice and the Associate Justices of the Supreme Court of the United States:

PRELIMINARY STATEMENT.

On April 2, 1945, this honorable Court entered judgment in the above entitled cause sustaining the order of the Federal Power Commission complained of herein.

The Court's opinion, while fairly stating certain of petitioner's[1] contentions, makes no reference to other contentions of petitioner which go to the very root of the dispute. Furthermore, the opinion indicates that petitioner has not succeeded in making clear its contention with respect to the Commission's treatment of its revenues from unregulated sales. The Court holds (opinion, p. 5) that "The question is whether a formal allocation was necessary under the exceptional circumstances of this case."

We sincerely believe that, upon a rehearing of this cause, we can convince the Court that petitioner is not insisting upon mere legalism, but is urging that the Commission be required to follow some administrative procedure which will clearly define the line of demarcation between its regulated business and its unregulated business. The order under review here does not do that and results not considered by the Court are obviously unfair.

Petitioner respectfully shows unto the Court that a rehearing of this cause should be granted on the following grounds:

1. In the absence of basic and essential findings, the Court is unable to appraise the effect of the Commission's failure to allocate. Results not considered by the Court are obviously unfair.

2. The "exceptional circumstances of this case" relied upon by the Court to sustain the Commission's failure to allocate are either inferences unsupported by the record

1. For brevity, we refer herein to Panhandle Eastern Pipe Line Company, Illinois Natural Gas Company, and Michigan Gas Transmission Corporation, as "petitioner", Colorado Interstate Gas Company v. Federal Power Commission, et al., No. 379 October term, 1944, as "the Colorado Interstate case", Canadian River Gas Company v. Federal Power Commission, et al., No. 380 October term, 1944, as "the Canadian River case" and Colorado-Wyoming Gas Company v. Federal Power Commission, et al., No. 575 October term, 1944, as "the Colorado-Wyoming case". All page references to the opinions in the above cases are to the pamphlet copies supplied by the Clerk of the Court.

or not exceptional in any sense. None of these so-called exceptional circumstances presents any obstacle to the application by the Commission in petitioner's case of the same method of allocation which it applied to Canadian River Gas Company, Colorado Interstate Gas Company and Colorado-Wyoming Gas Company.

(a) The circumstance that "a witness for petitioner testified at the hearing that under petitioner's allocation of costs the unregulated business has the use of facilities of the company without any charge" is an inference unsupported by the record.

(b) The circumstance that "the company attempts no allocation in the conduct of its business. The business is operated as a unit" is not an exceptional circumstance, but a common practice in the natural gas industry.

(c) The circumstance that one of petitioner's officers testified on cross-examination that "any attempt to allocate return, as between regulated business and unregulated business" is "unrealistic", "theoretical" and "not practical" is not exceptional when considered in the light of the circumstances under which he was testifying and the fact that such officer was not produced by petitioner to testify on allocation.

(d) The statement of the Court that "none of the main transmission line operating and maintenance costs was charged to the direct industrial sales" is inaccurate.

(e) The Court's statement that "all agreed that an allocation on the basis of investment or costs would be impractical" is an inference not supported by the record.

(f) The Court's statement that "all agreed that the fair division was a matter of judgment not mathematics" is an inference not supported by the record.

3. The Court has failed to consider the allocation submitted by the Commission's staff through a witness who was better informed than anyone else on the Commission's method of allocation.

4. The Court has failed to consider the fact that petitioner not only requested the Commission to make a segregation of property as between regulated and unregulated sales, but also requested (submitting detailed proposed findings) the Commission to make an allocation of costs; and that petitioner, in its application for rehearing, urged its objection to the Commission's failure to make such allocation.

5. The holding of the Court that once the use of "a formula is waived or is conceded to be impractical or theoretical", the general effect of what the Commission did may be accepted as an allocation, without specific findings of any kind, is contrary to established principles of law consistently recognized and applied by this Court.

6. The question discussed in the Court's opinion under the heading "Producing and Gathering Facilities" should be re-examined in the Canadian River case, and here.

GROUNDS OF PETITION.

I.

In the Absence of Basic and Essential Findings the Court Is Unable to Appraise the Effect of the Commission's Failure to Allocate. Results Not Considered by the Court Are Obviously Unfair.

In the Colorado-Wyoming case, the Court sets forth the standard for judicial review of an order of the Federal Power Commission as follows (opinion, page 7):

> The review which Congress has provided for these rate orders is limited. Sec. 19(b) says that the "finding of the Commission as to the facts, if supported by substantial evidence, shall be conclusive." But we must first know what the 'finding' is before we can give it that conclusive weight. *We have repeatedly emphasized the need for clarity and completeness in the basic or essential findings* on which administrative orders rest. * * * Their absence can only clog the administra-

> tive function and add to the delays in rate-making. *We cannot dispense with them* for Congress has provided the standards for judicial review under this Act. * * * The courts cannot perform the function which Congress assigned to them in absence of adequate findings. Nor are they authorized under §19(b) to make findings and substitute them for those of the Commission. (Italics added.)

In the case at bar, however, this standard for judicial review is not applied, although the Commission made no findings of the dollars charged as costs or allowed as earnings with respect to the unregulated sales, and stated in its opinion that it had made no allocation (R. J. 34). The Court stated (opinion, p. 5):

> What the Commission did was to allocate to the interstate wholesale business all of the earnings from the entire business in excess of a 6½ per cent return. Insofar as that procedure allocated to the interstate wholesale business *any earnings from the direct industrial sales in excess of 6½ per cent*, it is said to be justified by the use which the direct industrial business made of the main transmission line and its facilities. If that was unfair, the order must be set aside. If it was fair, no reversible error is shown. (Italics added.)

Under this standard of "unfair" or "fair", a result is approved, the measure of which is so vague and uncertain that it can only be expressed in the language of the Court, italicized in the above quotation, as shown *infra* page 10.

Another result, not considered by the Court, is so grossly unfair as to warrant a rehearing of the cause: The order of the Commission requires a reduction in the gross revenues of petitioner from all sources, but does not permit petitioner to reflect any part of such reduction in a reduction of its unregulated rates. It would appear that, if it is fair to treat the business as one subject to regulation in

its entirety (as the Commission frankly admitted it did, R. I. 34) in determining the amount of gross revenues in excess of a fair return upon all of the business, it is grossly unfair to require, *without further findings*, that such reduction in revenues be reflected only in reduced rates applicable to part of the business; yet, that is exactly what the Commission did.

To comply with the order, petitioner cannot accord to its direct customers any reduction in rates without reducing its gross revenues substantially beyond the amount of reduction ordered by the Commission.

The Court states in its opinion (page 4):

> We agree that the Commission must make a separation of the regulated and unregulated business when it fixes the interstate wholesale rates of a company whose activities embrace both. Otherwise the profits or losses, as the case may be, of the unregulated business would be assigned to the regulated business and the Commission would transgress the jurisdictional lines which Congress wrote into the Act.

Directly in point is the following statement of the Court in the Colorado-Interstate case (opinion, p. 9):

> The cases are presented as if the 6½ per cent allowed by the Commission on the rate base limits the earnings from the whole enterprise to 6½ per cent. That also is not true. The return merely measures the earnings allowed from the regulated business. As we have noted, the excess of earnings which Colorado Interstate makes from direct industrial sales (on the basis of 6½ per cent return) is $131,000 annually.

Here, it is conceded that the 6½ per cent allowed by the Commission on the rate base limits the earnings from the whole enterprise to 6½ per cent. It is apparent that, in order to maintain its earnings at the 6½ per cent return allowed by the Commission, petitioner will be forced to

continue in effect existing rates for direct industrial customers.

If petitioner's business in its entirety is earning $5,094,384 in excess of a 6½ per cent return, what the Commission did with respect to the unregulated business cannot be regarded as fair unless there is a finding, supported by evidence in the record, that the net earnings from the unregulated business do not exceed a specified portion of the 6½ per cent return allocated to the unregulated sales. Such a finding is essential here to support the requirement in the order of the Commission that all of the reduction must be reflected in the regulated rates, but that finding is lacking. Furthermore, such a finding would be contrary to the facts in this record. The Court states in its opinion (p. 9) that the earnings derived from these rates to direct customers show "an apparent profit of more than 200 per cent." The only evidence in the record on the subject is the evidence presented by the Commission's staff through its witness Shattuck and the evidence presented by petitioner. There is no support for such a finding in any of this evidence, but, if such a finding could be made, it must still be compared with an unknown quantity, namely, what part of the return allowed on the entire business is properly allocable to the unregulated business.

The difficulty presented here arises out of the fundamental error of the Commission in failing to find the exact amount of earnings and costs attributable to the wholesale business and to make an allocation as between the regulated sales and the unregulated sales. Had this been done, a proper and fair order could have been framed, requiring a reduction, not in the gross revenues of the company, but in the revenues derived from the regulated sales, and requiring that this reduction be reflected in a reduction of the rates subject to the jurisdiction of the Commission.

Petitioner is not asking to be reheard merely to insist on adherence to ritual. It is seeking to have its unregulated business recognized as such and to have the expenses chargeable thereto defined with some degree of certitude.

Examined from a realistic point of view, the Court's statement that "What the Commission did was to allocate to the interstate wholesale business all of the earnings from the entire business in excess of a 6½ per cent return" (opinion, p. 5) does not meet petitioner's contention that the Commission treated the business as subject to regulation in its entirety and did not observe the statutory limitations upon its jurisdiction. Under either the test of "fairness" or the test of "end result" the Court's use of the word "allocate" (in spite of the Commission's frank statement that it did not "allocate", R. I, 34) does not place a different aspect on what the Commission did. Obviously, what the Commission did was to disregard the statutory limitation upon its jurisdiction.

The Commission did not, as the Court holds (opinion, p. 8) use "its informed judgment instead" of "a formula." Its action in treating the business as one subject to regulation in its entirety reflects a refusal to exercise its informed judgment within the jurisdictional limits of the Act.

The record before the Commission contains all facts and figures required for either a separation of property or an allocation of costs as between the regulated sales and the unregulated sales. In addition to the evidence on allocation offered by petitioner, the Commission's witness Shattuck prepared, in accordance with the Commission's method of allocation, discussed and approved by this Court in the Colorado Interstate case, and presented (R. XVI 6883) an allocation complete in every respect except for the one

item of cost which depended on the rate base and rate of return to be fixed by the Commission, namely, an allocation of the return allowed.[2]

A proper exercise of "informed judgment" would require that the Commission adopt or modify one of the two allocations offered, or, in any event, make complete and adequate findings showing the amount of revenue derived from the regulated business and *the amount of reduction therein* to be reflected in reduced regulated rates. It requires no "informed judgment" to treat both the regulated and the unregulated business as subject to regulation.

A statute so rigid in its procedural requirements as applied to the regulated company (particularly those of section 19(b) invoked against petitioner here), can hardly be so flexible in its jurisdictional requirements as applied to the administrative agency, where the right to retain substantial revenues is involved. While the amount of money impounded under the order of the Circuit Court of Appeals (stated by Government counsel in the course of oral argument to be nearly $17,000,000 but now nearer $20,000,000), will go primarily to the United States treasury in the form of excess profits taxes if the order is set aside and, if it is sustained, may reach ultimate consumers only in part (in view of the decision of this Court in *Central States Electric Company* v. *City of Muscatine*, ... U. S. ... No. 85, Oct. Term 1944) the stockholders of petitioner should not be deprived of their comparatively small share in this fund by administrative procedure which disregards statutory limtations or is lacking in essential findings.

---

2. In the Colorado Interstate case (opinion, p. 3) the Court quotes the Commission as follows:

> All that can be accomplished by an allocation of physical properties can be attained by allocating costs including the return. The latter method is by far the most practical and businesslike.

No more glaring instance of a lack of "basic and essential findings" can be found in any reported case. If this case is "exceptional" in any respect, it is certainly so in that regard. In the Colorado-Wyoming case the Court reversed in part the judgment below because of defects in a finding of the Commission with respect to allocation. The Court said (opinion, p. 5):

> When we read that finding against the record there are ambiguities which we are unable to resolve were it our province to do so.

Here, by reason of the lack of the basic and essential administrative findings, the Court expresses its view of what the Commission did (opinion, p. 5), but is unable to state the measure of its effect or "end-result" except in the following language: "insofar as that procedure allocated to the interstate wholesale business any earnings from the direct industrial sales in excess of 6½ per cent * * *." This is, patently, an unknown quantity.

The question immediately arises: *6½ per cent of what?* Treating the business as subject to regulation in its entirety, the Commission found that 6½ per cent on its rate base would yield a fair return. There was no separation of property as between the regulated business and the unregulated business, and there was no allocation of the return allowed. Consequently, it is impossible to determine from the Commission's opinion and findings just what were the "earnings from the direct industrial sales in excess of 6½ per cent." It is thus apparent that, by reason of the lack of "the basic or essential findings", it is impossible for the Court (except by making these essential findings itself, which, the Court holds, it cannot do) to determine whether what the Commission did was fair or unfair. We submit that the Court's holding (opinion, p. 9) that "the Commission did not exceed the limits of its discre-

tion when it allocated to the regulated business all excess earnings of the entire business over 6½ per cent" should be reconsidered.

II.

The "Exceptional Circumstances of This Case" Relied Upon by the Court to Sustain the Commission's Failure to Allocate Are Either Inferences Unsupported by the Record or Not Exceptional in Any Sense. None of These So-Called Exceptional Circumstances Presents Any Obstacle to the Application by the Commission in Petitioner's Case of the Same Method of Allocation Which It Applied to Canadian River Gas Company, Colorado Interstate Gas Company and Colorado-Wyoming Gas Company.

The Court's opinion indicates that "a formal allocation" would be required were it not for what the Court regards as "the exceptional circumstances of this case." The Court states (opinion, p. 5):

> The question is whether a formal allocation was necessary under the exceptional circumstances of this case.

While we suggest that the introduction of such an exception to established principles of law applicable to judicial review of administrative action is of such far-reaching effect and public importance as to warrant reconsideration, our purpose here is to convince the Court that the circumstances of this case regarded as exceptional by the Court are either inferences which cannot fairly be drawn from the record or are not exceptional in any sense.

Presentation of this ground of our petition necessarily requires a discussion of the facts. We shall, however, observe the brevity required in a petition for rehearing.

(a) The Court's statement (opinion, p. 5) that "A witness for petitioner testified at the hearing that under peti-

tioner's allocation of costs the unregulated business has the use of facilities of the company without any charge" is an inference which cannot fairly be drawn from the witness' testimony.

Biddison, the witness testifying, was an independent consulting engineer employed by petitioner to value its properties and to testify with respect thereto. He also prepared and testified with respect to Exhibit 251, which was introduced, not as representing a complete allocation "under petitioner's allocation of costs", as the Court infers, but as showing an allocation of only the costs directly attributable to each class of business under his interpretation of the Commission's opinion in the Colorado-Wyoming case. The complete allocation suggested by Biddison is set forth with record references at pages 30 to 34 of petitioners' brief and is tabulated on page 34 thereof. By reference thereto, it will be seen that a substantial and fair charge against the unregulated business was made for the use of facilities of the company used jointly by the regulated and unregulated business.

(b) The circumstance that the company operates its business as a unit and attempts no allocation in the conduct of its business is not exceptional in any sense.

Petitioner kept its books in accordance with the usual practice and custom of the industry. In no case that has come to petitioner's attention has a natural gas company maintained accounts reflecting an allocation of property and expense as between regulated and unregulated business. The Commission's opinion in the Canadian River, Colorado Interstate and Colorado-Wyoming cases (43 P. U. R. (N. S.) 205), indicates that the records of those companies did not reflect any such separation. The Commission said (p. 232):

> Nowhere in the entire evidence submitted by Canadian and Colorado Companies is there a complete presentation of the entire operations of the company broken down between jurisdictional and nonjurisdictional operations.

Moreover, petitioner's books are kept in accordance with the Uniform System of Accounts prescribed by the Federal Power Commission, which does not require such separation. Neither the Commission's staff nor petitioner's witness Biddison experienced any difficulty by reason of the manner in which petitioner's books were kept in making an allocation of costs.

(c) The circumstance that one of petitioner's officers testified on cross-examination that "any attempt to allocate return, as between regulated business and unregulated business" is "unrealistic", "theoretical" and "not practical" is not exceptional when considered in the light of the circumstances under which he was testifying and the fact that such officer was not produced by petitioner to testify on allocation.

That witness testified on direct examination with respect to operating problems in connection with proposed increases in capacity (R. VIII, 3933-3959). He gave no testimony on direct examination as to what would be a proper allocation; he was not produced by petitioner as a witness qualified to testify on that question. On cross-examination, he was interrogated briefly with respect to allocation of "return." He expressed his judgment that any attempt to allocate *return* was unrealistic, theoretical and not practical, but made no statement that it was impossible or impractical to make an allocation of petitioner's earnings as between the two classes of business. Believing, as did witness Biddison, that an attempt to "allocate return" was

not the appropriate way to allocate earnings, he said (R. XVIII, 3960) in commenting on the Commission's opinion in the Colorado cases:

> The idea of taking two classes of business and trying to divide, as is tried in this proration. I can't see how it is possible to not recognize both classes of business, when each business contributes something to the other. Now, unfortunately, that isn't apparently the position that some members of this Commission had in mind, but nevertheless it is my opinion. I think each one contributes something to the other, and that should be recognized.

The remarks of petitioner's officer were made before Commission's witness Shattuck testified and presented his exhibit, and he spoke without the benefit of the Commission's interpretation of its opinion in the Colorado-Wyoming case.

(d) The statement of the Court that "none of the main transmission line operating and maintenance costs were charged to the direct industrial sales" is inaccurate. The Court's reference is to the cost allocation reflected in Exhibit 251. It is shown at page 3, line 33 of that exhibit (R. XIII, 5951) that, of the total transmission and maintenance expense, amounting to $2,130,708, the sum of $165,259 was allocated against unregulated sales. This total sum of $2,130,708 includes items aggregating in excess of $1,000,000 which were allocated between regulated sales and unregulated sales on a volume basis with 86.8 per cent charged to regulated sales and 13.2 per cent charged to unregulated sales (lines 7, 11, 18, 28, 31 and 32 of page 3 of Exhibit 251).

(e) The Court's statement that "all agreed that an allocation on the basis of investment or cost would be impractical" is an inference not supported by the record. On the contrary, all agreed that it was possible to allocate on the basis of investment and also that an allocation on the basis

of costs was practical. Both Biddison and Shattuck did allocate on a basis of costs. The only difference between Biddison and Shattuck lay in Biddison's suggestion that $500,414 be contributed to depreciation and "return", as compared with Shattuck's allocation of depreciation and his adherence to the Commission's formula requiring an allocation of *return as an item of costs.* Shattuck stated that he could not compute the allocation of return until the rate base and rate of return were established (R. VIII, 4002). Biddison's "contribution" method could be applied regardless of the amount of the return. The results reached, respectively, by application of the two methods may be compared by reference to the computations appearing on pages 34 and 35 of petitioner's brief.

The Shattuck method shows $330,558 earned from the unregulated sales in excess of the 6½ per cent return after allocation; application of the Biddison method shows a comparable figure of $319,656. These figures are identical in nature with the item of $54,000 with respect to Canadian River Gas Company and the item of $131,000 with respect to Colorado Interstate Gas Company, appearing in the Court's tabulation at the bottom of page 4 of its opinion in those cases, and also with the item of $40,000 in the Colorado-Wyoming case (the difference between the sum of $159,000 and the sum of $119,000 mentioned in the Court's opinion in that case at the top of page 2).

(f) The Court's statement that "all agreed that a fair division was a matter of judgment not mathematics" is an inference not supported by the record. The two witnesses produced as experts on allocation used a combination of judgment and mathematics according to the respective principles adopted by each. All of Biddison's allocations of costs, as such, were made according to engineering principles and mathematics (R. VIII, 3656-3657). The one element in his method of allocation which he said was a matter

for the Commission's judgment and did not depend upon engineering principles was the amount of "contribution" to depreciation and return (R. VIII, 3872-3873). Shattuck's judgment was controlled by the method applied by the Commission in the Canadian River, Colorado Interstate and Colorado-Wyoming cases.

Petitioner took the position in its brief, and maintains here, that it was the duty of the Commission to examine this evidence and make findings with respect thereto. *Nowhere in the Commission's opinion or findings is either of the allocations suggested by these witnesses discussed or even mentioned.*

III.

The Court Has Failed to Consider the Allocation Submitted by the Commission's Staff Through a Witness Who Was Better Informed Than Anyone Else on the Commission's Method of Allocation.

The Court's opinion appears to proceed on the theory that the only evidence on allocation before the Commission was that presented by petitioner through its witness Biddison. The Court has failed to consider the complete allocation submitted by the Commission's staff through its witness Shattuck, who was better informed than anyone else on the Commission's method of allocation with respect to natural gas companies, which was revealed for the first time in the Commission's opinion and order in the Canadian River, Colorado Interstate and Colorado-Wyoming cases. That opinion and order were released March 18, 1942, a few weeks before the evidence of Biddison on allocation was introduced by petitioner. Petitioner's counsel and the witness Biddison advised the Examiner and Commission counsel in open hearing that they had been unable to understand the Commission's explanation of its treatment of demand costs in the Colorado-Wyoming case. In response, counsel for the Commission said (R. VIII, 3671):

> Of course, you will have that in greatest detail and in practical application very shortly.

Subsequently, the testimony of Shattuck and his detailed exhibit on allocation were introduced by the Commission's staff (R. VIII, 3991-4002; R. XVI, 6883-6887).

The purpose of the proceedings was to determine whether petitioner's rates were just and reasonable. Petitioner was entitled to have the evidence of Shattuck considered by the Commission and is entitled to have it considered by the Court in determining whether the Commission has performed its statutory duty.

IV.

The Court Has Failed to Consider the Fact That Petitioner Not Only Requested the Commission to Make a Segregation of Property As Between Regulated and Unregulated Sales, But Also Requested (submitting Detailed Proposed Findings) the Commission to Make an Allocation of Costs; and That Petitioner, in Its Application for Rehearing, Urged Its Objection to the Commission's Failure to Make Such Allocation.

In its opinion (p. 7) the Court points to the circumstance that petitioner requested the Commission to find that it had built no capacity for its direct industrial sales and that it was reasonable to allocate 50 per cent of the net earnings from unregulated sales as a credit to net earnings from regulated sales as compensation for the temporary use of such facilities provided for regulated sales but used from time to time in transporting the gas for direct interruptible unregulated sales, when not required for regulated sales, and continues

> But it does not appear that Petitioner requested the Commission to make a segregation of the properties used in the two classes of business.

The Court's reference is to paragraph 21 of "Proposed Findings of Fact" forming part of petitioner's opening brief before the Commission. That brief is not in the printed record. It is not even a part of the record certified by the Commission to the court below. Inasmuch, however, as the Court has quoted from one of petitioner's requested findings, it is not inappropriate that petitioner call to the Court's attention other requested findings of fact by which petitioner sought not only an allocation of properties but also appropriate allocations of costs.

In Finding No. 22, petitioner requested the Commission to find that a proper allocation of petitioner's gas plant as between regulated sales and unregulated sales resulted in a reduction of the prudent investment rate base by $591,727, of which $515,527 represented the depreciated portion of the investment applicable to unregulated sales and $76,200 represented the allocable portion of $1,500,000 working capital.

Petitioner also requested allocations of expenses. In Finding No. 23, it requested the Commission to find that, of the annual operating and maintenance expenses, $413,321 should be allocated to unregulated sales; in Finding No. 24, that, of the depreciation, depletion, and amortization charges, $34,404 should be allocated to unregulated sales; in Finding No. 25, that ad valorem and certain other taxes should be allocated in the sum of $51,972 to unregulated sales; and in Finding No. 26, that, of the income and excess profits taxes, $197,350 should be allocated to unregulated business.

In Finding No. 27, petitioner requested the Commission to find that, on the basis of 1941 consolidated revenues, $1,500,527 should be allocated to unregulated sales and that a credit of $500,414 representing a charge against the unregulated sales of one-half of the profits resultant from

said sales would increase the total revenues from, and allocable to, regulated sales to $16,789,459.

Thus, in the proposed findings of fact filed with the Commission before its order was entered, petitioner made an appropriate request to the Commission for findings both as to an allocation of property and as to an allocation of costs and earnings. The Commission should have disposed of those requests by making appropriate findings. It did not.

The Court observes in its opinion (p. 7) that, in the petition to the Commission for rehearing, petitioner did not complain of the Commission's failure to allocate properties, but merely complained of the Commission's action in taking the proceeds of direct industrial sales into consideration in determining the amount of petitioner's profits and in ordering the rate reduction; and in failing reasonably to allocate petitioner's earnings between regulated sales and unregulated sales. It is said "that precludes an attack in the courts on the Commission's order for failure to make a segregation of properties."

But petitioners have attacked the Commission's order because of *its failure to make an allocation of any kind* as between the regulated and unregulated business. The attack is made on the ground that the effect of the Commission's order is to assign profits from the unregulated business to the regulated business and, in the language of the Court (opinion, pp. 4-5), to "transgress the jurisdictional lines which Congress wrote into the Act." That is what the Commission has done in this case and petitioner's objection thereto was fully preserved in its petition for rehearing.

The proposed findings of fact filed with the Commission by petitioner included findings dealing with both an allocation of property and an allocation of costs. At the time

the petition for rehearing was prepared, however, petitioner was persuaded that, as the Commission had held in the Colorado cases (and as this Court has expressly held in reviewing those cases), it is not necessary, in order to allocate earnings, to make an allocation of property, but that a satisfactory result can be arrived at through an allocation of costs.

It is obvious that an allocation of earnings requires both a determination and allocation of receipts and a determination and allocation of appropriate charges against those receipts. Petitioner's objection to the Commission's failure to allocate was urged in the petition for rehearing in specifications 33 and 34 (R. XVI, 7147) which read as follows:

> XXXIII
>
> The Commission erred in assuming jurisdiction of respondents' direct sales by taking the proceeds from such sales into consideration in determining the amounts of respondents' profits, and then directing that the excess return so determined be reduced through a reduction of the prices and charges for gas sold for resale.
>
> XXXIV
>
> The Commission erred in failing reasonably to allocate respondents' earnings between regulated sales and unregulated sales.

By these specifications, petitioner brought notice to the Commission that it was complaining of the Commission's action in treating its business as subject to regulation in its entirety, thus, assigning profits from the unregulated business to the regulated business.

V.

The Holding of the Court that, Once the Use of "A Formula Is Waived or Is Conceded to Be Impractical or Theoretical," the General Effect of What the Commission Did May Be Accepted As an Allocation, Without Specific Findings of Any Kind, Is Contrary to Established Principles of Law Consistently Recognized and Applied by This Court.

In this case and in the Colorado Interstate, Canadian River, and Colorado-Wyoming cases, the Court has held that it is the statutory duty of the Commission to make an allocation of the earnings of a natural gas company between the regulated and nonregulated business and to limit its rate-making activities to that part of the business which is by statute made subject to its jurisdiction. In performing its statutory duty in this regard, it is essential that the Commission make specific findings as to the portion of the expenses of operation to be borne by the unregulated business and the portion of the earnings from that business that should be allocated to "the return" as an item of costs or contributed to the regulated business for the use of the jointly used facilities. Such findings, it is admitted, the Commission did not make.

The holding of the Court that, once the use of "a formula is waived or is conceded to be impractical or theoretical", the general effect of what the Commission did may be accepted as an allocation, without specific findings of any kind, is contrary to established principles of law consistently recognized and applied by this Court. It is in direct conflict with the principles announced and applied in the Colorado-Wyoming case.

This Court has repeatedly held that an order of an administrative tribunal which exceeds its statutory authority

or lacks an essential basic finding which will permit the Court to determine whether or not the statutory standards have been applied is void.[3]

As shown *supra* pages 8-11, any statement of the general effect of what the Commission did merely serves to emphasize the fact, admitted by the Commission (R. I, 34), that it made no allocation but treated the business as subject to regulation in its entirety.

The Natural Gas Act does not invest the Commission with authority to determine under what circumstances it will or will not assume jurisdiction over direct sales of natural gas companies. Such a grant of authority would be invalid as an attempt to delegate legislative powers in the absence of standards prescribing the occasion for, and the manner of, its exercise.[4] The Natural Gas Act does not provide such standards.

The objection that the Commission has exceeded its statutory powers is fundamental and goes to the jurisdiction of the Commission over the subject matter. This jurisdiction cannot be conferred either by waiver or by express consent.[5]

In *Beaumont, S. L. & W. Ry* v. *United States*, 282 U. S. 74, this Court held that a division of joint rates by the

5. *United States* v. *Griffin*, 303 U. S. 226; *Florida* v. *United States*, 282 U. S. 194; *United States* v. *American Ry. Express*, 265 U. S. 425; *Inter Mountain Rate Cases*, 234 U. S. 476; *Tap Line Cases*, 234 U. S. 1; *Beaumont, S. L. & W. Ry.* v. *United States*, 282 U. S. 74; *United States, et al.* v. *Corrick, et al.*, 298 U. S. 435; *Skinner & Eddy Corp.* v. *United States*, 249 U. S. 557.

Interstate Commerce Commission based upon evidence on a group basis and the use of averages was invalid even though the carriers had not objected to the method used by the Commission and had presented evidence on that basis. The Court said, page 87:

> And the Commission is not excused by the fact that the carriers presented evidence on a group basis or by the omission of the southwestern lines in their petition for a rehearing to object to the use of averages. The proceedings before the Commission were for the determination of what divisions are and for the future will be reasonable. Here the issue is whether the Commission's amended determinations and the order based on them are valid. Appellants are not estopped from assailing the averages or groups adopted. A sound basis for the rule or formula prescribing the divisions is essential to compliance with the Act.

In *United States, et al.* v. *Corrick, et al.*, 298 U. S. 426, the Court said, page 440:

> The appellants did not raise the question of jurisdiction at the hearing below. But the lack of jurisdiction of a federal court touching the subject matter of the litigation cannot be waived by the parties, and the district court should, therefore, have declined *sua sponte*, to proceed in the cause. And if the record discloses that the lower court was without jurisdiction this court will notice the defect, although the parties make no contention concerning it.

In *Skinner & Eddy Corporation* v. *United States*, 249 U. S. 557, the Court said, page 562:

> The contention is that the Commission has exceeded its statutory powers; and that, hence, the order is void. In such a case the courts have jurisdiction of suits to enjoin the enforcement of the order, even if the plaintiff has not attempted to secure redress in a proceeding before the Commission.

We submit that the failure of the Commission to limit the exercise of its powers to petitioner's wholesale business presents a question of the jurisdiction of the Commission over the subject matter, which petitioner could not waive either expressly or by implication.

VI.

The Question Discussed in the Court's Opinion Under the Heading "Producing and Gathering Facilities" Should Be Reexamined in the Canadian River Case and Here.

Under the heading "Producing and Gathering Facilities" the Court discusses petitioner's objection to the Commission's treatment of its producing and gathering properties in determining the amount of petitioner's gross revenues available for rate reduction. The Court holds (opinion, p. 10) that (1) this phase of the case is controlled by the Canadian River case and (2) petitioner is precluded by section 19(b) of the Act from attacking the order on this ground.

For the reasons set forth in the petition for rehearing filed by Canadian River Gas Company and by the Independent Natural Gas Association of America, Amicus Curiae, in the Canadian River case, we think the Commission's treatment of production and gathering properties in this case, as well as that, should be reconsidered.

Petitioner is barred from having the issue re-examined here unless it can convince the Court that it is not precluded from raising the issue by section 19(b) of the Act. This question was not fully briefed and argued before the

Court[6] and is of such public importance in the judicial review of orders of the Commission under the Natural Gas Act that it should be reconsidered and a determination thereof made only with the benefit of full argument.

We submit that petitioner is not so precluded because (a) the application for rehearing before the Commission fairly presented to the Commission petitioner's objection to the treatment of its production and gathering facilities and (b) the question, being one of jurisdiction, can be raised at any time in the course of the proceedings.

(a) *The application for rehearing before the Commission fairly presented to the Commission petitioner's objection to the treatment of its production and gathering facilities.*

We recognize that the soundness of petitioner's contention that it preserved its objection to the Commission's treatment of its production and gathering facilities depends on the construction of section 19(b) of the Act. If the provisions of that section are construed so strictly that no argument in support of an objection to the order can be made in the reviewing court unless such supporting argument appears in the application to the Commission for rehearing, then, petitioner must admit that its arguments here were not presented in its application for rehearing.

6. It appears in the brief for respondents only as a passing remark on page 31 with a short reference note, and was answered in petitioner's reply brief at page 9 with a short statement pointing out that it was a question of jurisdiction and could be raised at any time but that, nevertheless, the objection had been preserved in substance in the petition for rehearing filed with the Commission. By reason of the enlargement of the scope of review herein, respondents were unable to serve their brief within the time limited by the rules of this Court, and it did not reach petitioner's counsel until late in the afternoon of the Wednesday preceding Monday, January 29, the day the case was argued. Consequently, in order to have its reply brief printed and filed within the time limited by the rules of Court, petitioners had little more than twenty-four hours for its preparation, with the result that points raised by the respondents could be answered only briefly and without supporting argument and citation of authorities.

We do not think, however, that the provisions of section 19(b) should be so construed; we think that such was not the intent of Congress. The purpose of the section appears to be to give the administrative agency an opportunity to reconsider its order before judicial review and to prevent the Commission from being taken by surprise in the reviewing court by an objection to its procedure or determinations of which it did not have fair notice. The provision that even such an objection may be considered by the Court if "there is reasonable ground for failure" to urge it in the application for rehearing indicates that it was not the intent of Congress that the regulated company should suffer an injustice by reason of a strict construction of the limitation on the scope of review.

Here, the Commission can be presumed to have been aware of the limitation on its jurisdiction expressly set forth in section 1(b) of the Act providing that the provisions of the Act should not apply to the production or gathering of natural gas. In the course of the hearing, the question of valuation of the producing and gathering facilities arose. After extended argument before the Commission's Examiner, the Examiner ruled (R. I, 718; VIII 3974) that the valuation of all properties of petitioner, including its producing and gathering properties, should be based on evidence of original cost, and refused to permit petitioner to introduce evidence showing the present value of its gas leasehold estates. The Commission, in its opinion, approved the ruling of the Examiner (R. I, 18-21) and, for the purposes of its order, treated petitioner's business as subject to regulation in its entirety, valuing all of petitioner's property at original cost.

We think that petitioner's specification of error number II fairly placed the Commission on notice that peti-

tioner sought a rehearing for the purpose of fully arguing in all aspects, both factual and legal, results flowing from the refusal of the Examiner to admit petitioner's evidence of the present value of its gas leasehold estates.[7]

Mr. Justice Jackson, in his concurring opinion in the Canadian River case recognizes that production and gathering of natural gas are excluded from the jurisdiction of the Commission, but holds that the Commission may *value* such properties for the purpose of fixing the rates for interstate sales subject to the jurisdiction of the Commission. He holds, however, that valuation of natural gas producing properties at original cost has no rational basis. That is precisely the position of petitioner, with the added contention that such method of valuation, even if otherwise lawful, may not be applied to petitioner's unregulated properties and business.

Petitioner's position before the Commission was that, if its production and gathering facilities were included in the rate base, their valuation should be consistent with their status as unregulated properties. On the application for rehearing, this position was preserved, in that, petitioner's specification number II thereof was directed to the action of the Examiner, approved by the Commission, in refusing to admit petitioner's evidence of the present value of its leasehold estates.

7. This specification of error (R. XVI, 7142) reads as follows:

The Examiner for the Commission erred in refusing to admit in evidence the present value of the gas leasehold estates owned by Respondent Panhandle Eastern, based on the prices at which said gas leaseholds could now be sold, whether the production therefrom be sold by the purchaser in a regulated or in an unregulated market. The details of such valuation and the testimony of the witness Wallace explanatory thereof fully appear in Exhibits 37 and 37A, objections to the admission of which were sustained by the Examiner, and subsequent tender of proof thereon rejected.

(b) *The question, being one of jurisdiction, can be raised at any time in the course of the proceedings.*

The Court's opinion recognizes in its discussion of the challenge made by the City of Cleveland, as Amicus Curiae, to the jurisdiction of the court below over the subject matter of this litigation, that a question of jurisdiction can be raised at any time. The question presented here is recognized, discussed and decided by the Court as a question of jurisdiction in the Canadian River case. It is a fundamental principle that, where Congress has withheld jurisdiction, it cannot be conferred or exercised by waiver, concession, or other act of the parties.

Unless the pertinent provision of section 19(b) of the Act be regarded as a qualification of the jurisdictional limitations set forth in section 1(b) thereof, it would appear that a contention directed to the jurisdiction of the Commission under the Act would not be an objection to an order within the pertinent language of section 19(b). It seems to us that the type of objection which cannot be raised on review unless urged in the application for rehearing includes only objections directed to administrative action of the Commission exercised within the ambit of its authority.

The purpose of Congress in delimiting the jurisdiction of the Commission would be defeated if the power of the reviewing court to notice and set aside an exercise of jurisdiction on the part of the Commission expressly withheld by the statute were denied simply because, through design or oversight, no objection to the Commission's action in such regard was made in the application for rehearing. We submit that the decision in the Canadian River case should be reconsidered, and petitioner should have an opportunity to fully brief and argue here the question of whether the provisions of section 19(b) preclude petitioner from a reconsideration of the question as applied

Prayer.

Wherefore, petitioner prays that a rehearing be granted herein for the purpose of reconsidering the issues presented and the judgment entered and that, pending the Court's consideration of this petition, and until a ruling is made thereupon, the mandate to the court below be stayed, and the time for issuance thereof be enlarged.

Respectfully submitted,

IRA LLOYD LETTS,
32 Custom House Street,
Providence, Rhode Island.

Of Counsel.

Certificate of Counsel.

I, John S. L. Yost, being of counsel herein, do hereby certify that the foregoing petition for rehearing and for a stay of the mandate herein is presented in good faith and not for delay.

....., John S. L. Yost,
Attorney for Petitioner.

SUPREME COURT OF THE UNITED STATES.

No. 296.—October Term, 1944.

Panhandle Eastern Pipe Line Company, Illinois Natural Gas Company and Michigan Gas Transmission Corporation, Petitioners, *vs.* Federal Power Commission, City of Detroit, County of Wayne, Michigan, et al.	On Writ of Certiorari to the United States Circuit Court of Appeals for the Eighth Circuit.

[April 2, 1945.]

Mr. Justice Douglas delivered the opinion of the Court.

Panhandle Eastern Pipe Line Co. (whom we will call Panhandle Eastern) owns properties which constitute a natural gas production, transportation, and marketing system.[1] The system extends from gas fields in Texas, Oklahoma and Kansas through Missouri, Illinois, Indiana and Ohio and into Michigan.[2] The City of Detroit and the County of Wayne, Michigan, filed a complaint with the Federal Power Commission alleging that Panhandle Eastern's rates on gas sold to a distributing company in Michigan for resale there were unjust and unreasonable. The Commission on its own motion instituted an investigation under the Natural Gas Act of 1938, 52 Stat. 821, 15 U. S. C. § 717, of all of the interstate wholesale rates of Panhandle Eastern.[3] Following extended hearings the Commission entered an interim order, here under review, finding petitioner's interstate wholesale rates to be excessive and requiring petitioner to reduce them on and after November 1, 1942, as to reflect, when applied to petitioner's 1941 transportation and sales a reduction of not less

[1] The other petitioners, Illinois Natural Gas Co. and Michigan Gas Transmission Corp., were wholly owned subsidiaries of Panhandle Eastern. They sold all of their properties to Panhandle Eastern after these proceedings were instituted and were then dissolved. Accordingly, we will refer throughout to the three companies as "petitioner".

[2] The Commission found that the aggregate lines in this system constitute "the longest natural-gas pipe line in the world, serving more than 200 cities, towns, and communities with more than 700,000 retail customers in Texas, Kansas, Missouri, Illinois, Indiana, Michigan, and Ohio." 45 P. U. R. (N. S.) 203, 208.

[3] The investigation also included Illinois Natural Gas Co. and Michigan Gas Transmission Corp. See note 1, *supra*.

than $5,094,384 per annum below the 1941 consolidated gross operating revenues of $17,789,573. See 45 P. U. R. (N. S.) 203, 223. That order was affirmed by the Circuit Court of Appeals for the Eighth Circuit, one judge dissenting in part. 143 F. 2d 488. The case is here on a petition for a writ of certiorari which we granted limited to the two questions which we will discuss. But before we reach them we must dispose of a challenge made by the City of Cleveland, as *amicus curiae*, to the jurisdiction of the Circuit Court of Appeals for the Eighth Circuit over the subject matter of this litigation. Panhandle Eastern sought review in that court of the Commission's order under § 19(b) of the Act which so far as material here provides:

> "Any party to a proceeding under this chapter aggrieved by an order issued by the Commission in such proceeding may obtain a review of such order in the circuit court of appeals of the United States for any circuit wherein the natural-gas company to which the order relates is located or has its principal place of business, or in the United States Court of Appeals for the District of Columbia . . . ."

The petition for review stated that petitioner had its principal place of business in Kansas City, Missouri. That was not denied by the Commission and at no time prior to the entry of the judgment affirming the Commission's order was the jurisdiction of the Circuit Court of Appeals challenged. After the judgment of affirmance had been entered, however, the City of Cleveland filed a motion in the Circuit Court of Appeals for leave to intervene and challenged the jurisdiction of that court on the ground that petitioner did not have its principal place of business in that circuit. The same objection is pressed here.

If the objection is to the jurisdiction of the court, it does not come too late. *Industrial Addition Assoc.* v. *Commissioner*, 323 U. S. 310. But we think it goes to venue not to jurisdiction. We read § 19(b) to invest all intermediate federal courts with the power to review orders of the Commission, provided, however, that if a Circuit Court of Appeals, rather than the Court of Appeals for the District of Columbia, is chosen, the parties may object that the particular circuit lacks the specified qualifications. Venue relates to the convenience of litigants. *Neirbo Co.* v. *Bethlehem Corp.*, 308 U. S. 165. The provisions of § 19(b) plainly are of that character. Review in the Court of Appeals for the District of Columbia where the Commission must maintain its principal office and hold its general sessions (46 Stat. 797, 16 U. S. C. § 792) is convenient for the Commission. Review in any circuit where the

natural gas company is located or has its principal place of business is designed to serve the convenience of the company. The general grant of authority in § 19(b) to all the courts of appeal suggest that the question of which one should exercise the power in a particular case is a question of venue. None of the respondents objected at any time to the venue of the court below. The right to have a case heard in the court of proper venue may be lost unless seasonably asserted. *Industrial Addition Assoc.* v. *Commissioner, supra.* It may be waived by any party, including the government. *Peoria By. Co.* v. *United States,* 263 U. S. 528, 535-536; *Industrial Addition Assoc.* v. *Commissioner, supra.* The objection of the City of Cleveland which came after judgment had been rendered came too late. Cf. *United States* v. *Californina Canneries,* 279 U. S. 553, 556. Hence, we need not decide whether the suit was brought in the proper circuit.

Segregation of the Regulated and Unregulated Businesses. Panhandle Eastern makes direct industrial sales as well as sales to distributing companies for resale. The Commission made no segregation or separation of the properties used in these two classes of business. Nor did it make an allocation of costs between the regulated and unregulated phases of the business as it did in *Colorado Interstate Gas Co.* v. *Federal Power Commission, Canadian River Gas Co.* v. *Federal Power Commission,* and *Colorado-Wyoming Gas Co.* v. *Federal Power Commission,* decided this day. The reasons which the Commission advanced for its failure to make any allocation are so crucial to the disposition of the case that we quote from the opinion:

> "Upon the record before us, we consider it unnecessary to make an allocation of the respondents' business as between sales for resale and direct sales. The direct sales are made to nineteen industrial customers on an interruptible basis and at prices fixed in competition with other fuels.
>
> "According to respondents' own evidence, no capacity has ever been constructed or provided in their gas plant for these direct industrial customers. It is equally clear that deliveries are made to them only when there is available excess off-peak capacity not required by the other wholesale customers. As evidence of this fact, in 1941 the volume of gas sold to the direct industrial customers amounted to 13.2 per cent of the total system sales, whereas on the system peak day of the 1941-1942 winter the direct industrial sales constituted only 2.69 per cent of the total deliveries, due to interruptions and curtailments brought about by the necessity for meeting the wholesale customer requirements.

"Testimony of respondents' witnesses discloses that only $128,848 of the entire investment in plant (less than one-sixth of one per cent) is used exclusively in the service of the direct industrials. Moreover, the respondents themselves treat their entire business as a unit and make no segregation of costs or profits on their books as between the two classes of sales. Indeed, Panhandle Eastern's president testified quite clearly on cross-examination that any attempt to allocate would be 'theoretical,' 'unrealistic,' and 'not practical' because of the unified character of the business.

"Deliveries to the direct industrials are made only when the plant is not fully used in serving the requirements of the wholesale business, and are curtailed or interrupted when the capacity is required by the wholesale customers. It is apparent that the incidental direct industrial business is in reality a by-product of the wholesale business, comparable to the respondents' gasoline extraction business. All parties are agreed that the expenses and revenues in connection with the sale of gasoline extracted from the natural gas should be treated as an integral part of the respondents' entire operations. Thus, it is manifest from the evidence that the direct industrial sales are purely incidental to the main or principal enterprise, viz.: the wholesale business of the respondents." 45 P. U. R. (N. S.) p. 218.

Petitioner contends that these reasons do not justify the failure of the Commission to make a formal allocation either of the property or the costs between the regulated and unregulated business. It says that the direct sales are beyond the jurisdiction of the Commission even though they are comparatively small. It asserts that the fact that the direct sales are on an interruptible basis merely emphasizes the relatively small amount of the cost of construction and operation attributable to such sales. It says that no waiver of the statutory right to have the direct sales free from regulation can be inferred and that in any event the Commission's jurisdiction cannot be enlarged by waiver. And it contends that the Commission's finding that the direct industrial business is "in reality a by-product of the wholesale business" is not supported in reason or in fact.

We agree that the Commission must make a separation of the regulated and unregulated business when it fixes the interstate wholesale rates of a company whose activities embrace both. Otherwise the profits or losses, as the case may be, of the unregulated business would be assigned to the regulated business and the Commission would transgress the jurisdictional lines which

Congress wrote into the Act.[4] The Commission recognizes this necessity. As it stated in *Re Cities Service Gas Co.*, 50 P. U. R. (N. S.) '65, 89: "The company's facilities and operations are devoted in part to natural gas service which is not subject to our jurisdiction. This service consists principally of gas sales made directly to large industrial consumers. The necessity arises, therefore, for making an allocation of costs as between the jurisdictional and non-jurisdictional sales." The question is whether a formal allocation was necessary under the exceptional circumstances of this case.

We state the question that narrowly because the dispute in this case reflects not a rejection by the Commission of the principle of allocation but a disagreement over the propriety of the procedure followed here.

What the Commission did was to allocate to the interstate wholesale business all of the earnings from the entire business in excess of a 6½ per cent return. Insofar as that procedure allocated to the interstate wholesale business any earnings from the direct industrial sales in excess of 6½ per cent, it is said to be justified by the use which the direct industrial business made of the main transmission line and its facilities. If that was unfair, the order must be set aside. If it was fair, no reversible error is shown.

A witness for petitioner testified at the hearing that under petitioner's allocation of costs the unregulated business has the use of facilities of the company without any charge. He testified that there should be a charge against the unregulated business for the use of that property. Another witness for petitioner stated that the company did not make any allocation between the regulated and unregulated business—"that is, allocation of jointly-used assets"—in determining what would be charged to the unregulated sales. He stated, "It may be heresy to say so but we try to charge our nonregulated customers all the traffic will bear." It was conceded that the company attempts no allocation in the conduct of its business. The business is operated as a unit. And one of petitioner's officers testified:

---

[4] Sec. 1(b) provides:

"The provisions of this chapter shall apply to the transportation of natural gas in interstate commerce, to the sale in interstate commerce of natural gas for resale for ultimate public consumption for domestic, commercial, industrial, or any other use, and to natural-gas companies engaged in such transportation or sale, but shall not apply to any other transportation or sale of natural gas or to the local distribution of natural gas or to the facilities used for such distribution or to the production or gathering of natural gas."

"Q. That is, any attempt to allocate return, as between regulated business and unregulated business: is that what you meant was unrealistic?

"A. That is correct * * * * If you are going to allocate it theoretically you should allocate it on the basis of the investment and the expenses incident to each part of the business.

"Q. But it is theoretical?

"A. That is correct.

"Q. And not practical?

"A. That is what I am trying to say."

Petitioner presented evidence showing that in the test year 91.57 per cent of its total revenues, or $16,289,045, was received from its wholesale sales and 8.43 per cent, or $1,500,527, was received from its direct industrial sales. It presented a study showing total operating expenses of about $7,900,000 (not including federal income taxes and return) and assigning $499,699 to the direct industrial sales. Thus an apparent profit of $1,000,828 before income taxes was shown for the direct industrial sales. But that study did not allocate any of the annual depreciation expense of the main transmission line ($2,238,589) to the direct industrial sales. Of the $633,270 ad valorem taxes on transmission lines, only $1,738 applicable to the laterals used exclusively for direct industrial sales were allocated to them. None of the main transmission line operating and maintenance costs was charged to the direct industrial sales.

Petitioner recognized the unfairness of attributing to the direct industrial sales all of the apparent profit of $1,000,828. One of petitioner's witnesses testified:

"Q. Is there any engineering basis for a division, from an engineering standpoint?

"A. Not as an engineering matter. I do not know of any basis. As a business matter, I think there are ways in which it could be fairly decided. I think it requires some judgment based upon business experience to make a fair allocation of it but there is a little over a million dollars, some portion of which could, in all fairness, be set aside as a charge against operations on the non-regulated sales and a credit against operations on the regulated sales."

He went on to indicate what he thought a fair allocation would be:

"A. It is my opinion that that $1,000,828.98 should be divided fifty-fifty.

"Q. Why?

"A. It is just my judgment as a businessman that would be a fair allocation of it.

"Q. You mean fifty-fifty as between regulated and non-regulated business?

"A. That is correct. I think that would be a fair allocation.

"Q. That is a business judgment estimate, not a mathematical estimate?

"A. That is right. In that way, this non-regulated business has contributed half a million dollars a year towards the reduction in cost of the regulated business and if it does not contribute something, I do not think there is any justification for having the business."

Petitioner requested the Commission to find that it had built no capacity for its direct industrial sales which were "incremental" in nature and that it was reasonable to allocate "50 per cent of the net earnings from nonregulated sales as a credit to net earnings from regulated sales, as compensation for the temporary use of such facilities provided for regulated sales but used from time to time in transporting the gas for direct, interruptible, nonregulated sales when not required for regulated sales." But

included in the petition for rehearing", the following: Petitioner asserts that it also requested the Commission to make a segregation of the properties used in the two classes of business. No such request, however, was included in the petition for rehearing."

Commission erred (1) in taking the proceeds from the direct industrial sales into consideration in determining the amount of its profits and in ordering the rate reduction; and (2) in failing reasonably to allocate petitioner's earnings between regulated sales and unregulated sales. That precludes an attack in the courts on the Commission's order for failure to make a segregation of property. For § 19(b) of the Act provides that "No objection to the order of the Commission shall be considered by the court unless such objection shall have been urged before the Commission in the application for rehearing unless there is reasonable ground for failure so to do." No such excuse has been tendered.

On these facts we cannot say that the Commission transgressed the jurisdictional requirements of the Act when it failed to make a formal allocation of costs or of property. All agreed that an allocation on the basis of investment or costs would be impractical. All agreed that some division of the apparent profit from the direct industrial business had to be made. All agreed that the fair division was a matter of judgment not mathematics. In view of those concessions by petitioner, the manner in which it conducted its business, its failure to insist on a segregation of property

in its petition for rehearing, and its own failure to keep accounts which reflected a segregation of the properties or an allocation of costs among the two classes of business, we do not think it can now be asserted that the Commission erred in forsaking a formula and using its informed judgment instead.

We do not mean to imply that such concessions would warrant a departure of the Commission from the statutory scheme of regulation. The issue is a much narrower one. The Commission did not undertake to fix industrial rates. The Commission, as was its duty, merely determined what earnings were properly allocable to the unregulated business. Petitioner disagrees with the result. The use of a formula for an allocation of costs or a segregation of property might or might not have been more favorable to petitioner. But once the use of such a formula is waived or is conceded to be impractical or theoretical, there must be some discretion in the Commission to make that determination through the exercise of its informed judgment. We cannot say that the Commission abused its discretion by conceding on the basis of the special circumstances here presented that earnings of the entire business in excess of a 6½ per cent return should be allocated to the interstate wholesale business. The small investment in the direct industrial business, the incremental nature of it, the extent of the interruptions in service to the direct industrial customers, the manner in which the management has treated it afford a basis for the refusal of the Commission to credit it with a larger share of the earnings than 6½ per cent.

The Commission, while it lacks authority to fix rates for direct industrial sales, may take those rates into consideration when it fixes the rates for interstate wholesale sales which are subject to its jurisdiction. For § 5(a) provides that whenever the Commission "shall find that any rate, charge, or classification demanded, observed, charged, or collected by any natural-gas company in connection with any transportation or sale of natural gas, subject to the jurisdiction of the Commission, *or that any rule, regulation, practice, or contract affecting such rate, charge, or classification is unjust, unreasonable, unduly discriminatory, or preferential*, the Commission shall determine the just and reasonable rate". (Italics added) It is clear that contracts covering direct industrial sales come within that italicized clause of § 5(a).[5] The

[5] There must be filed with the Commission not only schedules of rates subject to the jurisdiction of the Commission but "the classifications, practices, and regulations affecting such rates and charges, together with all

industrial rates in force here produce revenues of $1,500,527 with expenses of $499,699 which, according to petitioner, result in earnings of $1,000,828 before income taxes. That is an apparent profit of more than 200 per cent. It is a fairly obvious indication that the regulated business is being saddled with costs which in fairness should be borne by direct industrial sales. That is an extremely relevant consideration for the Commission to take into account when it determines what costs are fairly attributable to each business and what the resultant rate for the wholesale business should be. Sec. 5(a) does not of course give the Commission authority to disregard the jurisdictional lines which Congress has drawn between interstate wholesale sales and direct industrial sales so as to level the profits between the two classes of business. But § 5(a) reinforces our conclusion that in the exceptional circumstances of this case the Commission did not exceed the limits of its discretion when it allocated to the regulated business all excess earnings of the entire business over 6½ per cent.

Producing and Gathering Facilities. The Commission constructed a rate base on the actual legitimate cost of petitioner's property in service on December 31, 1941, which it found to be $78,814,292. It deducted $12,596,987 for accrued depreciation, depletion and amortization. It added $920,000 for working capital. The result was a rate base of $67,137,305 on which the Commission allowed a return of 6½ per cent which it found to be "fair and liberal". It included in the rate base petitioner's producing properties[6] and gathering facilities. Petitioner claims that was error. It contends that it was incumbent on the Commission to determine the field price or actual field value of natural gas in the areas in which petitioner produces gas, to eliminate petitioner's leaseholds and producing and gathering facilities from the rate base, to disallow expenses of gathering and production, and to allow petitioner as an expense item the field price or actual field value for all gas produced by it and taken into the pipe line system. Evidence was offered to show what the market price or actual field value of the gas was. The argument is that the procedure followed by the Commission extends its jurisdiction

contracts which in any manner affect or relate to such rates, charges, classifications, and services." Sec. 4(c). By Rule 54.30 the Commission requires the filing with it of all contracts for direct industrial sales involving sales in excess of 100,000 Mcf per year. See 8 Fed. Reg. 16101.

[6] Petitioner produces approximately 50 per cent of the gas which it transports and sells, the remainder being purchased. The payments for gas purchased were allowed by the Commission as an operating expense.

over "the production or gathering of natural gas" contrary to the mandate of § 1(b).[7] Petitioner suggests moreover that if its leaseholds are to be included in the rate base they should not be included at cost but at what petitioner claims to be the market value.[8]

This phase of the case is controlled by *Canadian River Gas Co.* v. *Federal Power Commission, supra.* We need not repeat what we said there. It is clear that the value of producing properties and gathering facilities is affected whenever rates are fixed. That is inevitably true whether the leaseholds are put into the rate base or whether as petitioner urges the gas is valued as a commodity. That result is not avoided unless Congress puts a floor under production properties and gathering facilities of natural gas companies and fixes a minimum return on them. That Congress has not done. As Judge Sanborn aptly stated in the opinion of the Circuit Court of Appeals: "If there is an infirmity in the Commission's determination of the amount which should be included in the rate base as the cost or value of such facilities, we think the infirmity arises from the method used in making the valuation, and not from any lack of jurisdiction." 143 F. 2d 495. Petitioner, moreover, failed to object in its application for rehearing before the Commission to the inclusion of its producing properties and gathering facilities in the rate base. It is accordingly precluded by § 19(b) of the Act from attacking the order of the Commission on the ground that they are included.

Federal Power Commission v. *Hope Natural Gas Co.*, 320 U. S. 591, holds that the Commission is not bound to use any single formula for the fixing of rates. It is not precluded from using actual legitimate cost as it did here. The question on review is not the method of valuation which was used but the end result obtained since the issue is whether the rate fixed is "just and reasonable." § 5. In the present case the 6½ per cent return allowed by the Commission will permit petitioner to earn $4,363,925 annually on the basis of the test year after meeting all operating expenses which include depreciation, exploratory and development costs, and federal income taxes. The cost of servicing petitioner's long-term debt is $957,786 or 2.88 per cent. The cost of meeting the requirements of the preferred stock is $939,000 or 5.8 per cent. That leaves $2,467,139 for $20,184,175 of common

[7] See note 4, *supra*.

[8] The market value is alleged to be about $8,400,000 as compared with some $955,000 which the Commission found to be the actual legitimate cost.

stock—a return of 12 per cent. The return would be 9 per cent figured on the basis of common stock and surplus of $27,650,000. We are unable to say on these undisputed facts that the return is not commensurate with the risks, that confidence in petitioner's financial integrity has been impaired, or that petitioner's ability to attract capital, to maintain its credit, and to operate successfully and efficiently has been impeded.[9] See *Federal Power Commission* v. *Hope Natural Gas Co.*, *supra*, p. 603.

Affirmed.

Mr. Chief Justice STONE, concurring.

Mr. Justice ROBERTS, Mr. Justice REED, Mr. Justice FRANKFURTER and I concur for the following reasons only.

Petitioners did not raise objections in their application for rehearing to the Commission to the inclusion of their producing and gathering facilities in the rate base. By § 19(b) of the Natural Gas Act "No objection to the order of the Commission shall be considered by the court unless such objection shall have been urged before the Commission in the application for rehearing, unless there is reasonable ground for failure so to do." No reason appears for the failure of petitioners here to make objection on rehearing to the inclusion of the production and gathering facilities in the rate base.

---

[9] The Commission stated on this phase of the case:

"The evidence discloses that the respondents' business is exceptionally free from serious business hazards. The gas supply is assured for at least thirty to thirty-five more years. We have made ample provision in the annual depreciation allowance for the restoration of the capital investment in the property over the claimed life of the gas supply. The respondents' markets are rapidly expanding and embrace the large metropolitan area of Detroit, which alone takes 40 per cent of the entire output under a long-term contract. Panhandle Eastern's president testified that the demand for service is so great that within the next year the respondents will be called upon to sell every cubic foot of gas that can possibly be delivered through the lines, and that the capacity factor will increase from 70 per cent to 90 per cent.

"It is likewise apparent from respondents' own evidence that Panhandle Eastern has been able to raise considerable capital at low cost. Only recently it successfully completed a financing program at remarkably low rates which resulted in a substantial reduction in its annual cost of capital. In February, 1941, Panhandle Eastern sold $18,250,000 of first mortgage and first lien bonds and $5,000,000 of serial notes at an average annual interest cost of 2.74 per cent. In February, 1942, it sold an additional $10,000,000 of first mortgage bonds at an interest cost of 3.13 per cent and $15,000,000 of preferred stock at a cost of 5.86 per cent. After the financing, Panhandle Eastern's annual cost of long-term debt was 2.88 per cent and preferred stock was 5.87 per cent, a combined annual cost of only 3.85 per cent for these securities.

"Panhandle Eastern has earned an average of 10.64 per cent on its net investment over the past five years, and Michigan Gas an average of 8.5 per cent during approximately the same period." 45 P. U. R. (N. S.) p. 215.
